Antiquity of Disease. The antiquity of disease is shown by the recent discovery of Prof. Charles D. Walcott, secretary of the Smithsonian Institution, Washington. He found fossilized toxic, or poisonous bacteria, at the base of and far below the Cambrian rocks. These rocks had originally lain 36 miles below the earth's surface, but had been upheaved by some tremendous convulsion. There is an age of 30,000,000 years ago.
