BAPTIST CHURCH NOTES

The wave of influenza has seriously affected the attendance at all our services. The many friends sympathize with 204 in Sunday School.

The text for the morning message was Gen. 1: 1. Rather the text was the first four words of this verse; "In the beginning God..." The subject was, "God."

The subject for the evening hour was "God revealed by Jesus."

Sunday morning Rev. Smith and Mr. Jesse Lancaster sang a beautiful duet.

TRAGIC AUTO ACCIDENT AT CLIFFSIDE SATURDAY

services. Last Sunday there were only Mr. Moses Scruggs who met with a tragic accident late last Saturday evening. He was struck by the car of Dr. Wiseman, of Avondale, and knocked to the pavement. His left leg was broken in several places below the knee and he also received a bad head wound. Dr. Wiseman carried him to the Rutherford Hospital immediately where it was learned that the skull was not fractured. X-ray showed the bone of his leg so badly shattered that it was necessary to amputate the limb Sunday. At last report Mr. Scruggs was resting as well as could be expected. The accident was unavoidable and we understand that Dr. Wiseman is not held responsible according to reports.

GREEN FEED NEEDED FOR WINTER EGGS

Raleigh, N. C., Dec. 17.—Green feed added to the laying hen's ration in winter has increased egg production and has proven profitable wherever used.

"When the green feed pasture is exhausted with the coming of frost and cold weather, it is then necessary for the poultryman to provide such feed," recommends C. F. Parrish, poultry extension specialist at State College. "There is a wide variety of feeds that may be used to avoid monotony. Rape, alfalfa, oats, clovers, wheat, rye, barley, mangels and other feeds may be used. Sprouted oats are also used effectively by some growers. The oats are fed when the sprout is about three inches long and make an excellent succulent to supplement the scratch grain and mash."

Mr. Parrish says that it is not difficult to build a homemade oat-sprouter. All that is needed is a number of trays with holes punched in the bottom to allow excess water to escape. The seed oats are spread thinly over the trays to prevent the formation of mould growths. Sprouted oats secured in this manner are fed at the rate of from one to two ounces per day per hen. A good producing hen will consume from 25 to 30 pounds of this feed in a winter. Hanging cabbage about 18 inches from the floor will afford the laying hen needed exercise and will give her the succulent green feed needed. Beets may be used the same way.

When it is impossible to supply green feed, cod-liver oil may be mixed with the mash or grain ration to supply the same food elements. In mixing this oil with the feed, Mr. Parrish suggests that a small amount of the feed be taken and the cod-liver oil worked in thoroughly and this used as a stock mixture with the remaining food. One pint of the oil to each 100 pounds of feed in enough to use.

would mean lots of lights on the Christmas tree, lots of packages under it, a big brown turkey in the oven and much whoopee from the younger generation.

We are giving this extra \$100 to everyone who gets his new Super-Six now instead of waiting for the night before Christmas.

Here's the way you get it:

Bring in your present car for appraisal. We determine its market value as usual, and then add a cool hundred to it!

If you know of any easier way of making \$100, we'd appreciate hearing about it. This means, in most every case, that you get the world's most popular new six without any down payment!

Hudson-Essex cars are top value. They stand for more satisfaction per mile, per dollar, per day, per year or any other way you want to figure it. Sales prove it! Because people study all cars, compare all performance, weigh all prices against all performance, more of them buy Super-Sixes than any other type of six-cylinder car.
