

OLD FORT LAUDS FIRST SETTLERS

Large Arrowhead Marker Unveiled Before Crowd; Indians Smoke Peace Pipe.

Old Fort, July 28.—Commemorating the days of the pioneers, and marking the spot where once stood an old Indian fort, a gigantic Indian arrowhead, said to be the largest in the world, was unveiled Sunday afternoon in almost the center of the town of Old Fort, where more than 5,000 people from this and other states had congregated to take part in the celebration.

Before the unveiling, eminent men from various walks of life addressed the assembled throng and paid tribute and respect to the spirit of the pioneers who first ventured into the mountain fastnesses and thus started the onward march of civilization westward.

Indians Smoke Pipe.

Twenty Indians, representing the tribes of Catawba, of South Carolina, and Cherokee of western North Carolina, were seated on the speakers rostrum. All but Chief Carl Standing Deer of the Cherokees were accoutered in the clothes of the white man. The old chief donned his war bonnet for the occasion. Each of the speakers had a good word for the Indians and turned to them frequently during their addresses.

Little Martha Nesbitt, six-year-old great-great-grand daughter of Mrs. Martha Burgin, the only white person that was born in the fort, pulled the cord that caused the veil to drop.

Talkies Recorded.

A sound news reel company sent a camera and equipment from Atlanta, Ga., to record the unveiling.

When Food Sours

Lots of folks who think they have "indigestion" have only an acid condition which could be corrected in five or ten minutes. An effective anti-acid like Phillips Milk of Magnesia soon restores digestion to normal.

Phillips does away with all that sourness and gas right after meals. It prevents the distress so apt to occur two hours after eating. What a pleasant preparation to take! And how good it is for the system! Unlike a burning dose of soda—which is but temporary relief at best—Phillips Milk of Magnesia neutralizes many times its volume in acid.

Next time a hearty meal, or too rich a diet has brought on the least discomfort, try—

PHILLIPS Milk of Magnesia

Success for Her

"I know now why people who use Herbine praise it so much," says Mrs. J. G. Wade, who lives at 902 South Vernon, in Dallas. "For more than two years I was in bed most of the time, I was so exhausted. My nerves were so 'shot to pieces' I couldn't rest, and food didn't interest me a bit. Our druggist told us to use Herbine to get me straightened out and here I am as well as ever. I have even gained the forty pounds I lost." Herbine is a vegetable liquid which does nothing more than help your stomach and bowels take care of the food you eat. It keeps them active so your blood gets plenty of vitamins to build red corpuscles.

PEOPLES DRUG STORE

The camera got a shot of two Cherokees and two Catawbas, once bitter enemies, smoking a peace pipe together for what is said to be the first time in the history of the two tribes.

Among the speakers of the day were Rev. Clarence Stuart McClellan, Jr., of Fletcher; Hampton Rich of Winston-Salem; Zebulun Weaver of Asheville, and J. Austin Lattimer, secretary to Governor Richards of South Carolina.

The Indian Fort, built about 1756, marked the outpost of civilization for two generations. This territory was then embraced in Rutherford county.

Common Toad Is Enemy Of Insects

A healthy supply of toads about a place is an insurance policy against heavy insect infestation as about 90 percent of the toads food consists of insects.

"The common toad is generally recognized as an important enemy of insect pests," says Dr. Z. P. Metcalf, head of the department of entomology at State college. "Those who have studied the habits of the toad have come to the conclusion that insects make up about 90 percent of its food and the number eaten at a single meal is almost beyond belief. While the toad eats nearly any kind of insect which comes its way, it especially destroys large numbers of cut worms which are active early in the morning and late in the evening, the principal feeding time of the animal."

Dr. Metcalf suggests that toads could be readily increased about any garden by building permanent pools with water plants in which the toads could breed. Eggs laid in long strings hatch into tadpoles which live in permanent pools. If loose boards are laid about such a pool, especially under the shrubbery where the toads might find a safe retreat during the heat of day, the number of toads would be materially increased.

The chief enemies of toads are snakes and herons while fish and ducks prey upon the tadpoles. However, it is a constant warfare for existence in the animal world. Sometimes the enemies of the toad gets the upper hand and the number of toads decreases. At other times, these enemies are lessened and the toad population increases rapidly.

Dr. Metcalf says he fed 177 May Beetles to a toad in his yard in Raleigh in five nights. If each of these 88 pairs of beetles laid 100 eggs, this one toad prevented the development of 8,800 white grubs in his lawn that summer.

Quality And Selling Governs Hog Profits

With cold storage holdings of pork more than 63 million pounds less than they were one year ago and with the price of live hogs \$2.73 lower than it was last year at this time, what is the farmer going to do, asks W. W. Shay, swine extension specialist at State college.

"The price he receives for good hogs is something that the farmer cannot control, but he can control the quality of pork he produces and also the time or date of selling," says Mr. Shay. "These two factors affect to a large extent the price he receives and to a much greater extent the net returns which shows the profit or loss from this farming activity."

According to Mr. Shay the average market price of live hogs during the week ending July 19th was \$2.73 less than the price during the same period last year.

Mr. Shay states that prices for hogs have shown the highest average during September with August following a close second over a five year period but that only twelve percent of the market hogs produced in North Carolina are sold during that time. During these months a 200 pound hard hog will bring as much as a 300 pound oily hog will in December. In spite of this many spring pigs are now loafing in woods lots and pastures with little other feed, he says.

Another factor that the farmer can control is that of feed, says Mr. Shay. Where there is not sufficient feed on any farm shows a lack of foresight on the part of the farmer except in cases of crop failures. In many cases feed crops were planted but the yield was reduced through weather conditions or from insects. Under these circumstances Mr. Shay recommends that the herd be reduced so that the remaining hogs will be full fed.

Garren Gives Hints On Raising Wheat

Five points in wheat raising are given by G. M. Garren, cereal agronomist for the North Carolina Experiment Station as follows: A stiff, red clay soil; a red clover sod; land turned the latter part of August; seed drilled about October 20; crop fertilized with acid phosphate at planting, and, an average yield of 40 bushels an acre.

These five things were all done by S. W. McCachern of Linwood in Davidson County who is recognized generally in his community as a good wheat grower, says Mr. Garren. Mr. McCachern grew an average of 26.8 bushels on one 30-acre field. He then made 410 bushels on another ten acre field which had received the special attention as suggested by Mr. Garren.

One this ten acres, the soil was a stiff red clay, that seems to be best adapted to wheat growing in this State. A clover sod was turned as the initial preparation. This, says Mr. Garren, saved the expense of a high priced commercial nitrogen fertilizer. The sod was turned the latter part of August. All the data secured by the North Carolina Experiment Station confirm the desirability of turning land early for wheat. During the latter part of October, the land was disked and har-

rowed thoroughly until a finely pulverized seed bed was prepared.

Then, says Mr. Garren, the wheat was drilled in immediately at the rate of five pecks an acre. Four hundred pounds of 16 percent acid phosphate was drilled with the wheat at seeding time. This was the only commercial fertilizer used.

Mr. Garren says there are other methods of growing wheat. Where the land has not been enriched by growing and turning under clover, commercial nitrogen must be used. However, Mr. McCachern followed methods which any farmer may use at little cost and yet obtained an average yield on his ten acres which paid him for the labor and expense involved.

OWENSBY-SHEHAN.

Rutherfordton, July 28.—Friends will be pleased to hear of the announcement of the marriage of Rucker Owensby and Miss Annie Lou Shehan, which occurred May 19, the ceremony having been performed at Shelby and kept a secret until last week. Miss Shehan is the daughter of W. W. Shehan of Rutherfordton R-2.

The Peace Societies should get busy in New York, Chicago and other large crime centers and stop the gang war.

Observes Birthday Of Mr. J. L. Griffin

Approximately fifty members of the Griffin family, and others, gathered at the home of Mr. J. L. Griffin here Sunday and gave him a surprise birthday dinner. His brother, Mr. George Griffin, called for him early Sunday morning and in company with him attended preaching services at Pleasant Grove. When he returned at twelve o'clock he was surprised to find a large number present to greet him and offer congratulations on his birthday. A basket lunch was spread, which was greatly enjoyed by all. Due to inclement weather the table was placed in the dining room.

CAROLEEN WINS TWO GAMES SATURDAY

Caroleen, July 28.—Caroleen defeated Harris here in a nice played game of baseball Saturday, winning by a score of 12 to 5. Ray and Reinhardt were batteries for Caroleen while White and Bryant were batteries for the visitors. Alley secured three hits for Caroleen, while Melton, Reinhardt, Hawkins, Painter, Phillips and Ray each secured two hits. Matheny was the heavy hitter for the visitors, getting three hits, while A. Kendrick and Alexander each secured two hits.

Just before this game Caroleen

defeated Shingle Hollow by a 12 to 6 score. Hill and Reinhardt were the batteries, while Camp and Hammett performed for the visitors. Reinhardt secured two homers and a single in four times up, Monteith featured for the visitors at bat.

Adults Contract Children's Diseases

Adults can, and do, contract many children's diseases. And, usually, they suffer from them much more than children do. For instance, many adults contract worms, an ailment usually associated with children. Sometimes they suffer intensely and take expensive medical treatments, without realizing that worms are the cause of their troubles. Yet, the symptoms are the same as in children, loss of appetite and weight, grinding the teeth and restless sleep, itching of the nose and anus, and abdominal pains. And, the same medicine that surely and harmlessly expels round and pin worms from children will do the same for adults—White's Cream Vermifuge, which you can get at Peoples Drug Store.
