Your Cotton Will Come Up Standing Like This

When Planted With the LEDBETTER "One Seed" Corn and Cotton Planter

COME in and see the only real cotton planter. The planter with a positive, precise force feed, that will take linty cotton seed, just as it comes from the gin, and plant the seed in a straight, narrow line—one at a time, equal distances apart—as regular as buttons on a card.

Other planters can be set to plant "thick" or "thin," but this planter will plant thick—a bushel or more of seed to the acre—without bunching, or thin—down to a bushel to six acres—without skips.

Each plant stands alone with its own few inches of growing room—cuts the work of chopping down to one-half, and you can take your own time about chopping—plants keep on growing and make stocky, vigorous bushes.

When you plant your cotton with a Ledbetter "One-Seed" Corn and Cotton Planter—**one seed at a time, evenly spaced**—you can plant the best seed that money can buy at no more cost than ordinary seed, because none are wasted in useless bunching. And you get 5 bales of cotton on the same land that grew only 4 before, because there are no skips in the row.

When the Ledbetter "One Seed" Corn and Cotton Planter is set for planting corn it is strictly a corn planter, without an equal for that purpose—dropping without fail a single grain at any distance desired from 8 to 48 inches. And the same is equally true when set to plant other seeds, such as peas, beans, canteloupes, watermelon, sorghum, millet, etc.

With peanut attachment it plants peanuts, large or small, shelled or in the shell, with equal success. A double guarantee is behind every planter, that of the manufacturers, The Southern Plow Company, Dallas, Texas, and ourselves.

COME IN TODAY—We want you to see this planter whether you intend buying a planter now or not.
