**EXECUTOR'S NOTICE.**

Having qualified as executor of the estate of Martin Willis Harris, deceased late of Carteret County, North Carolina, this is to notify all persons having claims against the estate of the said deceased to exhibit them to the undersigned at Marshallberg, N. C., on or before the 30th day of June 1933, or this notice will be pleaded in bar of their recovery. All persons indebted to said estate will please make immediate payment.

STEPHEN F. HARRIS,  
 Executor of the estate of Martin Willis Harris, deceased.

**NOTICE.**

Having qualified as executrix of the estate of Charles P. Dey, deceased, late of Carteret County, North Carolina, this is to notify all persons having claims against the estate of said deceased to exhibit them to the undersigned at Beaufort, North Carolina, on or before the 20th day of July, 1933, or this notice will be pleaded in bar of their recovery. All persons indebted to said estate will please make immediate payment.

This 20th day of July, 1932.  
 SARAH JONES DEY,  
 Executrix of Charles P. Dey.

**NOTICE—RE-SALE OF LANDS**

In accordance with order of the Superior Court of Carteret County in matter titled Gurney P. Hood, Commissioner of Banks etc. vs D. M. Jones et al., undersigned Commissioner will, on Saturday, August 20th 1932, noon hour, at courthouse door in Beaufort, N. C., offer for sale, and sell to highest bidder or bidders, for cash or upon terms bid at the said sale (to be approved by the Court), the following described properties:

Jack's Island: "Jones-Beveridge Farm," on North River Road, containing 50 acres; lot 35 Hedrick Town; Lot 84 New Town; Part lots 26 and 27 New Town (consisting of three houses and part two lots on Ann street, known as John and Alex Moore places); part lot 50 New Town on Broad street; 210 and 208 Old Town (Mulberry, Queen Pollock Sts.); 104 Old Town, Orange and Broad (2 houses, and corner lot); 252 Old Town—Front and Craven Sts., 3 store buildings—25 feet on Front—then 20 feet on Craven St.—then 20 feet on Front St.

This July 28th., 1932.  
 JULIUS F. DUNCAN,  
 Commissioner

Reports from piedmont counties estimate that the corn crop has been cut 50 per cent and even greater than that in some of the eastern counties.

A group of farmers in southern Wake County report they have already threshed out 8,000 bushels of small grain, mostly wheat.

The six tenants on the farm of T. J. Purdie of Cumberland County have 72 hogs.

**POULTRY**

**SAVE THE POULTRY BY KILLING MITES**

**Simple Treatments to Get Rid of Lice.**

(By O. C. UFFORD, Extension Poultryman, Colorado Agricultural College—WNU Service.)

Many Colorado farmers and poultrymen save money and cut costs of production simply by preventing their poultry and poultry houses from becoming infested with lice and mites.

Lice and mite infestations affect the health, growth and production of poultry. These pests can be easily controlled by proper action. Lice, which live on the birds and are known as biting parasites, may be controlled by smearing a small amount of blue ointment mixed with an equal amount of petroleum jelly, lard or vaseline, around the vent. This treatment should never be used on small chicks. Dusting powders such as sodium fluoride may be placed in the feathers on different parts of the body to control lice.

When large flocks are to be treated for lice, nicotine sulphate may be applied with a brush or oil can to perches before the birds go to roost. Fumes from the nicotine destroy the parasites. This fluid will also kill mites if they come into contact with it. Badly infested flocks should be treated a second time in about ten days.

Mites live around perches and roosting places, gradually spreading over poultry houses and farm buildings when not controlled.

Stock dips, formaldehyde or carbolic acid are some of the common materials used for spraying roosts and houses. An effective home remedy can be made by using one gallon of crude crank case oil, one-half pint of stock dip or crude carbolic acid, and, if necessary, this may be thinned with one to two quarts of kerosene. The easiest time to control mites and lice is in the spring, before they become too numerous.

**Flock Will Respond to Well-Balanced Ration**

Eggs from chickens fed a ration full of vitamins A and D are better food than eggs from chickens fed rations less rich in these vitamins, according to the results of recent research available to the department of poultry husbandry at the Ohio State university.

Recent experiments indicate, says the department, that the amount of vitamin A and D supplied to the birds is directly reflected in the vitamin content of the eggs produced. Thus, in feeding his hens to maintain their health, the poultryman is feeding for eggs of better quality and more worth.

A ration for hens rich in vitamins would contain yellow corn, alfalfa leaf meal, or a high grade cod liver oil.

Vitamin D prevents rickets and assists with the building of bone. Vitamin A builds resistance to disease and infections.

**Early and Late Chicks**

Chicks hatched early have many advantages over those hatched late. As a general rule they are more vigorous; the mortality is less; and the cockerels may be sold for better prices, and the pullets will mature in time to lay high-priced eggs next fall.

Just why the early chick is more vigorous is hard to explain. That less mortality is experienced is probably due to the fact that coccidia and parasites, such as worms and mites, are less active before the onset of hot weather. It is true that more trouble from these pests is experienced later in the season.

**Poultry for Income**

Science has placed the rate of mortality among chicken flocks so low that it is now no longer a major risk. As an income source, both from meat and eggs, poultry offers returns measured fairly accurately by the number of chicks to be used. The initial investment in equipment is offered today at most attractive prices and since the life of equipment extends over a long period of years, the annual investment may be considered very low.

**Select Vigorous Chicks**

Vigorous baby chicks have full bright eyes, downy fluff, are plump and have well rounded shanks. Other points to look for in selecting chicks include the following: Freedom from bacillary white diarrhea, weight of eight pounds per 100 chicks at 24 hours of age, well healed body openings at which yolk was absorbed and richly pigmented shanks and beaks. Chicks from healthy breeding flocks and from birds high in egg production are always preferable.—Nebraska Farmer.

**Diarrhoea in Fowls**

Diarrhoea may be caused by feeding spoiled food of some kind and garbage should be pretty carefully inspected before being fed. It may easily contain spoiled bits of meat or moldy food of some kind. A dose of epsom salts, one pound dissolved in the drinking water of 100 fowls, or dissolved in a little water and mixed with a wet mash, so distributed that all can get their share, may be given to clean out the digestive organs of the birds.—Rural New-Yorker.

**THE DAIRY**

**NOT ALL ANIMALS REVEAL INFECTION**

**But Losses by Abortion Can Be Minimized.**

This question has been asked us: "Is it advisable to attempt to rid a herd of contagious abortion by selling every cow as soon as she aborts?" Little or no benefit will be secured from any such program, because many animals that have the infection present do not give any evidence of it and cannot be detected except by a blood test.

Doctor Metzger of the New York State College of Agriculture suggests that breeders who are unable to use the blood test to eradicate the disease, can reduce their losses by the following practices:

Isolate every aborting animal. If possible have a maternity stall with a concrete floor and clean and disinfect it thoroughly.

Raise all replacements on the farm except the herd sire. Research shows that heifers born of an aborting dam have the infection at birth, but by the seventh or eighth month the infection generally leaves. After breeding, they become highly susceptible.

Everything should be done to guard the bred heifer from taking the infection into her system. This means watching things not only in the barn but while on pasture.

All cows and heifers should be pastured separately from all outside stock. One aborting animal will often infect all bred animals in the pasture.

For replacements, some dairymen are buying four and five-year-old cows hoping that they have had abortion. Generally such cows are not as susceptible to the infection as heifers.—American Agriculturist.

**Testing Necessary for Keeping Check on Cows**

In these days of financial uncertainty how long would a banker last if he simply accepted the deposits that were offered and cashed the checks that were drawn on his bank, without going to the trouble and expense of keeping a line on each customer and entering each transaction in his records?

It sounds ridiculous, doesn't it, but it is no more ridiculous than for a dairyman to say he can't afford to test his cows simply because prices are down and conditions trying. The banker individualizes each account. If you are one of his customers and you write a check to pay the gas bill when there is no balance in your account, the check does not pay the account and possibly you will get in bad.

In like manner, the successful dairymen will individualize his cows, and when he is not keeping the deposits of food and care up to standard, the cow is going to return the drafts marked "Insufficient Funds" or, if he is doing his part up to the letter all the time, and the cow isn't honoring the checks, then there is something wrong, and the cow herself is very apt to be in bad.—H. E. Colby, in Iowa C. T. A. Report.

**Sunlight Affects Flavor**

A tallowy or even a burnt flavor in milk about which housewives in Chicago and other cities recently have been complaining may be caused by nothing more than leaving the milk exposed to light, according to P. H. Tracy, assistant chief in dairy manufactures at the college of agriculture, University of Illinois.

Milk users who take advantage of natural refrigeration during the winter months and leave bottles of milk standing in windows or unprotected out of doors are likely to find that the flavor is impaired, he said.

Either direct sunlight or diffused light when permitted to pass into milk through colorless glass hurts the flavor. Permitting the bottle of milk to remain in the sunlight even for 30 minutes may cause the milk to acquire a tallowy flavor sometimes described as a "cappy" or pasteboard taste. If the milk is allowed to remain in the sun long enough a distinct burnt flavor will predominate.—Exchange.

**Potassium Proved Value**

One lot of calves at the Ohio experiment station was fed on the milk from cows which were getting normal feeds while another lot was fed on the milk from cows which were being given one gram of potassium iodide per day each. The calves fed on the milk from cows getting the potassium iodide made better use of their feeds. Another test at the same station showed that cows on pasture produced butterfat approximately twice as potent in vitamin A as the butterfat of the same cows before turning them on pasture.—Successful Farming.

**Record Friesian Cow**

A German newspaper, Gemeinnetzger of Varel, Oldenburg, East Friesland, Germany, reports that G. Taben of Poggenkrug, Kreis Wittmund, East Friesland, has received highest reward for record Friesian cow, Gertrud 131181. In her test of 305 days she produced 13,819 kilograms milk (approximately 30,465 lbs.). This matter was brought to our attention, says the Rural New Yorker, by a reader, Carl Effken, whose early home was in that part of Germany.

**SUNDAY SERVICE**  
 Lodge Meetings

**ANN STREET M. E. CHURCH.**

R. E. Munns, Pastor.  
 J. A. Hornaday Jr., S. S. Supt.  
 Preaching services every Sunday, 11:00 A. M. and 7:30 P. M.  
 Sunday School every Sunday at 9:45 A. M.  
 Prayer service Wednesday evening 7:30 P. M.  
 Ladies Aid Society 1st. Monday of each month at 3:30.  
 Missionary Society 1st. Tuesday of each month at 3:30.  
 Mission Study Class 2nd, and 4th. Mondays of each month at 2:30.  
 Philathea Class at 7:30 P. M. on 2nd. Monday evening each month.  
 Teacher Council on 2nd Thursday of each month at 7:30 P. M.
