MORE ABOUT RUBBER

(Continued From Page One)

lands from which we got more than 90 percent of our rubber, we must be very careful of the rubber we have. One way of making our stock of crude rubber last as long as possible is to mix the crude with a percentage of reclaimed rubber made from scrap. This produces rubber up to Army standards—five old tires or 80 hot water bottles or fourteen 20-foot lengths of garden hose will supply the amount of reclaimed rubber used in the rubber parts of a 37 MM gun carriage. And the reclaimed rubber used in a flying fortress could be supplied by 20 tires or 320 hot water bottles or 16 20-foot lengths of hose. Guns and bombers will win the war. Help hurry them off the production line by taking your scrap rubber collection to the nearest filling station—Now!

— Rubber —

There's good rubber in that worn out tire, that split hot water bottle. The U. S. rubber industry always has used a certain amount of reclaimed rubber — rubber made from scrap—in its products. Automobile tires contain from twenty-five to fifty per cent reclaiming rubber, depending upon prices, substantial amounts were mixed with new crude rubber to make your overshoes and shower curtains. Scrap rubber is potentially as good as new rubber in many respects. Now it's needed to bridge the rubber shortage created when the Japs overran Malaya and The Netherlands' East Indies. Scour your attic, cellar and garage today, hurry your collection off to the nearest filling station.

— Rubber —

How much junk rubber is lying around your house? How many broken hot water bottles and old overshoes and worn-out tires? Scrap rubber has a wartime job to do. Scrap rubber refined into reclaimed rubber and mixed with crude rubber from our stockpile will help keep the wheels rolling toward victory! All the reclaimed rubber needed to manufacture the rubber parts of a pursuit plane could come from three discarded tires or nine 20-foot lengths of garden hose. The reclaimed rubber parts of a two-ton Army truck could be refined from six tires or 96 hot water bottles or eighteen 20-foot lengths of rubber hose. An old pair of four-buckle arctic boots could provide enough reclaimed rubber for an Army raincoat and an inner tube would yield enough or ten civilian gas masks. Get your scrap rubber collection to the nearest filling station now!

— Rubber —

Rubber reclaimed from scrap always has been an important source of material for the U. S. Rubber Industry. For a long while from a third to a fourth of all the rubber processed each year has been reclaimed rubber. Reclaimed rubber mixed with new crude rubber from our stockpile will make good, sturdy rubber articles for military and essential civilian use. Now, with the Japs in control of the sources of more than 90 percent of our normal crude rubber imports, scrap rubber is more important than ever before. We need every ounce we can scrape up, to make our stockpile of crude rubber last. Now is the time to get your collection of scrap rubber down to the nearest filling station.

Lost and found columns of Tokio newspapers are crowded these days. Every time an American buys a War Bond, the Japs lose face. Buy your 10% every pay day.

WANTED — ONE UGLY MALE bull dog, puppy preferred. Write to Beaufort News.

WANTED: PERSON TO LEARN dark room work not subject to draft. Apply to the Photo Shop, Beaufort, N. C.

APARTMENTS FOR RENT — Woolard Apartment House, Live Oak St., Beaufort.

MORE ABOUT PROBLEMS

(Continued from page 1)

zone chairmen for Morehead City and Beaufort met at the Civic Center in Morehead City on June 17 and after organizing a planning committee selected the name of "Women's Defense and Health League."

Mrs. Eunice N. Tyler, Health Educator of the United States Public Health Service, was present to offer suggestions and assist in the planning. Dr. C. P. Stevick, County Health Officer, acted as chairman of the combined meeting. The following program was outlined:

1. To make Carteret County the healthiest County in North Carolina by improving and protecting the health of every man, woman and child.

2. To organize the women of the county into neighborhood study groups that will be ready for any emergency and that will take an active part in solving defense problems.

The following plan of action was decided upon:

1. All chairmen will meet once a month to receive instructions and review materials. Reports of the activities of the neighborhood groups will be heard.

2. Every woman in the County will be asked to join a neighborhood study group. They will meet one hour a month to discuss health and other defense problems, see moving pictures and receive pamphlets on the topic under discussion.

The group decided to carry out an immunization survey during the remainder of this month and to begin the study of nutrition in July. The survey will be carried out by house to house visits of each sector chairman to the families in her neighborhood. The reports will be analyzed and the statistics presented to the next meeting of the League.

A moving picture was shown at the end of Wednesday's meeting in Morehead City. Movies will play an important part in the activities of the League. A movie projector with sound equipment will be available by appointment from the County Health Department for use at the neighborhood group study periods. Films and literature will also be available through the Health Department.

Mrs. Tyler will be present to assist in leading many of the study groups.

It is believed that this new organization can be made invaluable to the defense effort.

MORE ABOUT STEVICK

((Continued From Page One))

records on 300 cases that are treated outside the county or by private physicians.

Before showing the Rotarians a film "Know For Sure," an educational sound-movie prepared by the United States Public Health Service, Dr. Stevick outlined the Carteret County Health Department's extended program for venereal disease control. The program includes the following points:

- Case Finding**
1. Food handler examinations.
 2. Pre-natal examinations.
 3. Marriage examinations.
 4. Draft examinations.
 5. Contact examinations.
 6. Health Department examinations of prostitutes, prisoners, etc.
 7. Suspected cases. Health Department: School children with eye symptoms, mental defectives, etc. Physicians: Rashes, primary lesions, etc.
 8. New cases are diagnosed by combined physical and laboratory examinations: Wasserman tests and microscope. All positive cases

are contacted by private physicians, by mail or by follow-up worker.

Case Holding

1. Reports of all cases diagnosed are reported to Health Department and recorded. Cases are reported from: (a) Physicians, (b) Selective Service Board, (c) Health Department examinations, (d) Reports from other Health Departments—county and state.
2. Reports of regularity of treatment of all patients in county go through health department. (a) Physicians, (b) Health Department Clinics.
3. Delinquents revealed by this record are followed up by mail or follow-up worker.
4. State laws. (a) Marriage law, (b) Food handler and domestic servant law, (c) Examination of suspicious cases, (d) Treatment of infected individuals.

Case Treatment

1. Private Physicians.
2. Health Department, (a) White clinic, (b) Colored clinic, (c) Mobile clinic, (d) New clinic under consideration.
3. Institutions. (a) Samracon, (b) Industrial School in Kinston, (c) State Prisons.
4. Dispersing drugs by Health Department to private physicians.

Public Education

1. Talks and Lectures. (a) Movies, (b) Schools, etc.
2. Literature distributed. (a) Patients, (b) Meetings.
3. Exhibits, etc.
4. Results of Education. (a) Any program a failure without intensive education, (b) Directly affects case finding and case holding.

Prevention of Venereal Diseases

1. Suppression of prostitution.
2. Prophylactic stations. (a) Army, (b) Of questionable use for civilians.

The tin used in a single automobile, about 3 1-2 pounds, would make eighty No. 2 food cans, or enough for a whole year's allotment of tinned food for a U. S. soldier.

MORE ABOUT DUKE

(Continued from page 1)

College of Pennsylvania and did under graduate work at Mt. Holyoke.

Miss Eloise Johnson of Glen Burnie, Maryland—an ecological study of marine agar-digesting bacteria. This will be thesis for master's degree. She attends Duke University where she also did undergraduate work.

R. K. Holzworth of Syracuse, N. Y., is studying the respiration of turtles for a master's thesis. He attends Duke University and took undergraduate work at Syracuse University.

J. M. Davis of Terre Haute, Indiana, is studying the larval stages of marine polychaete worms for a master's thesis. He took undergraduate work at Indiana State and at present attends Duke University.

D. P. Gordon of Miami, Fla., is studying the marine plankton. He attended the University of Florida.

H. J. Humm, resident investigator, is studying the possibilities of producing agar-agar, alginic acid and other products from the sea weeds of the Beaufort region.

Prior to the war nearly all our agar was imported from Japan. It is now being made in California. This product is of great importance to hospitals where it is used to grow and study disease-producing bacteria. Mr. Humm attended the University of Miami for undergraduate work and later Duke University.

Reginald Hawkins and Randolph Johnson, both of Beaufort, are assisting in research work and doing maintenance work at the station for the summer. Hawkins just finished his first year at Johnson C. Smith University at Charlotte, where he was laboratory assistant in biology. He plans to enter medical school. Johnson recently received a B. S. degree, major in biology, from Greensboro Agricultural College.

tural and Technical College at Greensboro.

Three additional research students are expected to arrive at the station within the next week or so:

Louise Randall—A study of the polyps of the Beaufort region. Master's thesis. Has been teaching this past year at Limestone College, in South Carolina. Undergraduate work at Stetson University, DeLand, Fla. Home town, Daytona Beach, Fla.

Madeline Hill—A study of plant succession on dredge-produced fills in the vicinity of Beaufort. Master's thesis. Home town, Washington, D. C.

Josephine Bierman — Plankton of the marine waters of Beaufort. Master's thesis. Home town, Washington, D. C.

Dr. James Beal of the Duke Forestry Department, and son Raymond, visited the station over the weekend. They are on a trip collecting destructive bark beetles of southern timber trees for future study. Dr. Beal is a forest entomologist.

Dr. Bert Cunningham of the Duke Zoology Department and Dr. Willard Berry of the Geology Department were at the Fisheries Station over the weekend. Dr. Cunningham is working on the hormones of sea turtles.

Dr. A. S. Pearse, director of the Duke Station, will return to Durham on Friday. He expects to be back at the station about two weeks later. He will offer a course in animal ecology during the second six weeks. At the same time Dr. H. J. Oosting will teach plant ecology.

Last Saturday night the first of the weekly social gatherings of the Duke colony was held in the mess hall. Following card games, prizes were awarded and each person did a stunt. Dr. Pearse sang two humorous solos.

The following is the seminar program for the first six weeks. Dr. Pearse inaugurated the series last Wednesday with a description of his travels and work in Nigeria on the Yellow Fever Commission. His lecture was illustrated with over 100 slides.

June 17—The work of the Beaufort Biological Station of the United States Fish and Wildlife Service—H. F. Prytherch.

June 24—Work at the Beaufort Marine Laboratory of Duke University—C. G. Bookout.

July 1.—Observation on Beaufort Polychaetes — Martha Clark. Observations on Beaufort Molluscs—Hulda Magalhaes.

July 8—Plankton at Miami

Beach, Fla. — Donald Gordon. Polychaete Larvae—J. M. Davis. July 15—To be announced. Anyone interested is invited to attend.
