New Navigation Method Aids Shipwrecked Men

Emergency navigation methods requiring no instruments, except a good watch and a sheet of paper containing simple instructions, can now tell shipwrecked men adrift at sea where they are and in what direction they are going. So declares Dr. Charles H. Smiley, director of the Ladd observatory, Brown university, Providence, R. I.

"To navigate by conventional methods, one needs previous training, special instruments, and certain tables of mathematical and astronomical data," says Dr. Smiley. "The lack of any one of the three—training, instruments, or tables—is enough to prevent navigation as ordinarily practiced."

Commenting on the new emergency navigation methods, he says: "You need only watch for the first glimpse of the sun above the horizon at sunrise, and note the time. Then you must note the time of sunset."

"It takes a full day to get your bearings, but if you're lost or afloat on an ocean, time is the one thing you have a lot of. The number of hours and minutes between sunrise and sunset is enough to determine one's latitude, and from the time of local noon (halfway between sunrise and sunset) you can find the longitude west of Greenwich. All you need is simple arithmetic. The instructions and the necessary tables, together with an illustrative example, cover only one side of a sheet the size of typewriter paper. These are printed with waterproof ink on waterproof paper."

Modern Roads Planned For Rebuilt London

London is not waiting for the war to end before making reconstruction plans, according to advices received from British engineers by the American Road Builders' association.

One plan prepared by the London County council for study is centered around construction of three modern "ring" roads, highways which in the United States are called belt lines. These ring roads would encircle the London area, at convenient intervals, with radial roads serving as connectors to facilitate travel in and out of any section.

The inner ring road would surround central London, co-ordinating the railroad termini. This project would include a tunnel under Hyde Park and the Thames river, east of London Tower.

The second ring road would facilitate the circulation of dock traffic and industrial traffic. The third ring road would be several miles farther out. Nine major radial arteries, connecting the second and third ring roads, would extend well into the country.

Cookies as Placecards

Big six-inch cookies can be used as placecards, mantel decoration or original gifts to your friends and neighbors. Just roll chilled old-fashioned cookie dough and cut with a six-inch cutter. If you don't have a cutter, use the top of a coffee can, or plop down a bread and butter plate and whiz around it with a knife. Lift the cookie with a broad pancake turner.

When they're baked and cooled, put a dab of frosting in the center of a paper doily and plunk on the cookie. Spell out the person's name on the cookie with lines of frosting and these space cinnamon candies with a toothpick on the lines. With a pastry tube and confectioners' frosting, make a simple scalloped edge. Now fasten a red bow with red string and tie it at the back through the cookie and doily too. You can make a hole in the cookie with a toothpick or use a big darning needle and literally sew the bow to the cookie. If cinnamon candies aren't available, use confectioners' sugar frosting tinted red. Force it through a paper cornucopia in red dots to form the letters.

Changed Names

Saint Petersburg was founded in 1703 by Peter the Great, but after Russia entered the First World war the name was changed to Petrograd, as the Russians thought the form "Petersburg" sounded too German. In 1924, when Nikolai Lenin died, the city was renamed Leningrad in his honor, and the Soviet government announced that mail addressed to Petrograd would not be delivered in the future.

Leningrad has been the target for German bombs and shells for about two years and the outer sections have suffered great damage but observers relate that less destruction than might be expected is apparent in the central part of the city which has elaborate defenses in antitank barriers, pillboxes and blockhouses.

Pan-American Highway

Within a year or two after the end of the war, motorists from this country in large numbers probably will be driving as far south as the Panama Canal Zone, according to progress reported in road-building.

Although gaps exist on the Pan American highway beyond Oaxaca in Mexico, these are being eliminated rapidly by Mexico's accelerated construction program. Other gaps in the 3,300-mile long artery to Panama are chiefly in Costa Rica. However, the highway was to be open this fall from the south border of Mexico through Guatemala, Honduras and Nicaragua to within Costa Rica.

BONDS OVER AMERICA

Irrigating millions of acres, and providing unlimited electric energy, Boulder Dam on the Colorado river is one of the construction wonders of the world. It represents an investment of \$125,000,000.

Boulder Dam

"Let's All Back the Attack," with Extra War Bonds

Bombers and saboteurs are destroying years of labor in the water systems of Europe—the great dams built to provide for the comfort of man, not his destruction.

College Hints For Farm Homemakers

By RUTH CURRENT

Gardener's squeeze. Squeeze a handful of soil before starting to dig this spring, garden specialists advise Victory gardeners. The condition of the soil rather than the calendar or the weather tells when to start ground preparations. Experienced gardeners test soil with a squeeze. If the soil sticks together after pressing in the hand it is still too wet to work, but if it crumbles apart it is ready.

Home Tool Kit. Every family should plan to make household equipment last as long as possible. Daily care and needed repair of equipment will determine the length of its usefulness. The following tools will be helpful in making simple repairs at home: screw drivers, monkey wrench, knife, putty knife, nails, tacks, pliers, hammer, ruler, brush, solder, ice pick, flat file, round file, whet stone, and oil can. Keep your home tool kit handy and ready for use.

Press As You Sew. Success or failure in making a garment often depends on the way it is pressed during the making as well as after completion. Always test temperature of iron on scrap of fabric before pressing.

Press seams immediately after stitching. Do not wait until dress is completed. Never rest iron on fabric. Keep it moving constantly to avoid marking fabrics.

Press all seams up form bottom or in towards center of garment. Press darts on light fabrics to one side, either up or towards center. On heavy fabrics slash darts and press open. Lift gathers while working point of iron into them.

While pressing, always smooth garment into correct shape so that fabric is not stretched. Continue smoothing fabric before passing iron over it to avoid pressing creases into it.

Support Prices Hiked for Peanuts, Soybeans

Prices of both peanuts and soybeans above those originally proposed will be guaranteed North Carolina producers under the 1944 price support program, according to G. T. Scott, chairman of the State AAA Committee.

Announcement of the increase in price was made by the War Food Administration, and is in accordance with recent Congressional action authorizing the 1944 support program.

Under the program, peanuts produced in 1944 will be supported at base prices to farmers of \$160 per ton for Spanish, Virginia and Valencia types and \$145 per ton for runner types. These base prices are for peanuts having

SALE NOTICE.

Directed and authorized by judgment of Carteret County Superior Court in action "Carteret County et al vs Ann Franklin, et al" undersigned will, on

Saturday, April 8th, 1944 at 12 M o'clock

at court-house door in Beaufort, N. C., offer for sale, and sell, to highest bidder, for cash, or upon terms bid at sale (all subject to court's confirmation), the following lands:

Lot 157 town, Beaufort, N. C., on Northwest corner of Cedar and Queen Streets, with improvements. This 7th day of March, 1944.

J. F. DUNCAN,
Commissioner of the Court.
4t M9-16-23-30

sound, mature kernel content of 65 per cent in the case of Virginia, Valencia, and runner types, and 70 per cent in the case of Spanish, Scott said. Premiums and discounts will be established for other qualities. Prices originally announced were \$150 per ton for Spanish, Virginia, and Valencia types, and \$140 per ton for runners.

Soybeans produced in 1944 will be supported at a price to producers of \$2.04 per bushel for green and yellow beans grading No. 2 or better with 14 per cent moisture content delivered to country elevators or other normal producer delivery points. Premiums will be provided for lower moisture content and discounts will be in effect for lower grades. Prices will be 20 cents per bushel lower for brown, black and mixed beans.

"These prices were announced by the War Food Administration in an effort to encourage planting of full goals for these crops," Scott said. "The price of these two crops were increased above the prices proposed originally in order to give producers a price more in line with other crops."

North Carolina goal for peanuts is 330,720 acres and the goal for soybeans is 3395,913 acres, he added.

Lard

There is more lard on the market than cold storage warehouses can accommodate and it is suggested that housewives store a small amount of extra lard in their refrigerators.

Fertilize Pastures For Cheaper Feeds

Recent tests on pastures in North Carolina have shown remarkable increases in grazing from the use of fertilizers, report E. C. Blair, Extension agronomist, and A. C. Kimrey, Extension dairyman at State College, who say that good pastures furnish the cheapest source of feed nutrients for both dairy and beef cattle production.

Under feed shortage conditions they recommend about 400 pounds of 4-8-4 fertilizer per acre of pasture in the Coastal Plain and 400 pounds of 4-12-4 in the Piedmont and Mountains. Most pasture soils need limestone and an application of from 1,000 to 2,000 pounds per acre is suggested. Instead of commercial fertilizer, manure can be applied during the winter to excellent advantage.

In renovating old pastures, the

Sentinels of Health

Don't Neglect Them!
Nature designed the kidneys to do a marvelous job. Their task is to keep the flowing blood stream free of an excess of toxic impurities. The act of living—life itself—is constantly producing waste matter the kidneys must remove from the blood if good health is to endure. When the kidneys fail to function as Nature intended, there is retention of waste that may cause body-wide distress. One may suffer nagging backache, persistent headache, attacks of dizziness, getting up nights, swelling, puffiness under the eyes—feel tired, nervous, all worn out. Frequent, scanty or burning passages are sometimes further evidence of kidney or bladder disturbance. The recognized and proper treatment is a diuretic medicine to help the kidneys get rid of excess poisonous body waste. Use Doan's Pills. They have had more than forty years of public approval. Are endorsed the country over. Insist on Doan's. Sold at all drug stores.

DOAN'S PILLS

Extension specialists suggest that the weeds and shrubbery be cut and that the soil be scratched to a depth of about 3 inches. This may be done with a heavy, spike-toothed harrow, or with a disc set almost straight, so as not to destroy the old sod. Then apply the fertilizer and any seed that are needed. If the pasture is badly infested with noxious weeds, it is advisable to break the land and grow a crop before reseeding.

The specialists warn that the pasture should not be grazed too early in the spring before the grasses have made a good start and too heavily during dry weather. Soybeans, lespedeza and other

such crops can be used for grazing during the dry periods. Pastures should be mowed several

times to keep down the weeds. A few sheep will help control the weeds.
