Battle Against Disease Goes on Forever

The war against disease is one in which there is no armistice. It's a big war, too, for the toll of lives from diseases exceeds that of the battlefronts. These pictures take you to medical headquarters of the Children's Aid Society in New York and show you a phase of the battle against disease. Left: Dickie is next. Johnny has already gotten "the works." Center: "No fair." Johnny trusted the nice man and was pricked with a nasty needle. Right: This little chap cuddles up to the doctor as if the doctor were his own dad.

THERE are two ways to make a slip cover. One is to pin and then cut the actual material right on the chair; the other is to cut muslin or old sheets on the chair and then use the pieces for a pattern. Whichever method is used, fit and pin the pieces smoothly but do not stretch them. Allow 1/2-inch

seams and a 4-inch tuck-in around a spring seat. Notch the seams to show how they should be joined. When fitting a pattern, mark each piece with an arrow, as shown, to indicate which way the grain of the goods should run.

At the bottom of the sketch the pattern pieces are shown pinned to the material. If figured fabric is used, be sure to place the pattern pieces so that the design is centered for the back and the seat of the chair.

NOTE—This illustration is from BOOK 3 which also contains working directions and diagrams for other types of slip covers and many illustrated ideas for giving your house a fresh start this spring. Price of BOOK 3 is 15 cents. Address:

INOCULATE ALFALFA—SOYBEANS ALL LEGUMES WITH NITRAGIN
It costs about 12¢ an acre and takes only a few minutes to inoculate seed with NITRAGIN. Yet it frequently boosts yields of alfalfa, clover, soybeans, other legumes up to 50% and more. It increases feeding value of legume hay and pasture, helps build fertility. Tests prove it pays to inoculate every seeding of legumes regardless of nodules on roots of previous crops. NITRAGIN provides selected, tested strains of nitrogen-fixing bacteria. NITRAGIN is the oldest, most widely used inoculant—in the yellow can, at your seedsmen.
Twin plots of alfalfa, growing side-by-side produced these vastly different yields. Inoculation made the difference. Test by Experiment Station.
