The Staked Plain of Texes. As Smooth as an Inland Sea and a Mystery to Geologists.

The geological mystery of Texas is the Llano Estacado or Staked Plain. It lies south of the Canadian and east of the Pecos and west of the 101st meridian. "In surface features," Prof. Hill says, 'the northwestern half of this plain is

similar to the plains of Colorado, Kansas, and northward. But there is this differareas, it is surrounded on every side, except a few miles at its southeast corner, by a more or less precipitate escarpment isolates it from the surrounding region except the Edwards plateau, which is its

southeastern connection already mention. The Staked Plain is there, a great, steepsided island in an ocean of land. This elevation surface embraces 50,000 square miles. The geographical tradition their way across. This accords pretty

The Philosophy of the Gizzard. It Explains the Digestive Ability of the Ordinary Hen and the Extraordinary Ostrich.

**VOLUME XXXX.—NUMBER** 1424

A fowl's gizzard, where so many lost articles turn up, is a curious trap as well as a necessary vital organ of the fowl. Diamonds, pearls, coin, buttons, tacks, orange peel, and about everything else, save dynamite, have been found in the gizzards of fowls.

A study of the organ is interesting. Experiments have demonstrated that ence. Instead of extending to the Rocky what may be called the gastric juice in Mountains on the west or imperceptibly fowls has not sufficient power to dissolve rading into the level of the eastern their food without the aid of the grinding action of the gizzard. Before the food is prepared for digestion, therefore, the grains must be subjected to a triturating of erosion resembling palisades. This process; and such as are not sufficiently bruised in this manner, before passing into the gizzard, are there reduced to the proper state by its natural action.

The action of the gizzard is, in this respect, mechanical, this organ serving as a mill to grind the feed to pieces, and then, by means of its powerful muscles, pressing it gradually into the intestines, is that the Spaniards gave the name be- in the form of a pulp. The power of this cause they had to drive stakes to mark organ is said to be sufficient to pulverize hollow globules of glass in a very short well with Prof. Hill's description. He time, and solid masses of the same subsays this vast surface is perfectly smooth, stance in a few weeks. The rapidity of with the exception of an occasional this process seems to be proportionate depression - so much so as to resemble generally to the size of the bird. A the level of the ocean at dead calm. It is chicken, for example, breaks up such unbroken by trees or bushes or deep substances as are received into its stomach drained channels. It is carpeted with a less rapidly than the capon, while a goose rich growth of gramma grasses. The performs the same operation sooner than new railroads of Texas and New Mexico either. Needles and even lancets given have made accessible to the geologists this to turkeys have been broken in pieces largest of all Texas plains, and perhaps and voided without any apparent injury the greatest and least studied plateau of to the stomach. The reason undoubtedly our country. The small amount of sur. is that the larger species of birds have face water which is not drunk up by the thicker and more powerful organs of soil is found in a few widely distributed digestion.

ponds. Two streams flow around the It has long been the general opinion plain. They are the Canadian and the that from some deficiency in the digestive Pecos. Both have cut nearly 1,000 feet apparatus fowls are obliged to resort to to impose any amount of taxes for the privilege of holding office or filling their banana meal for the New York market Yet the rainfall on the Staked Plain from the plain. Some have supposed that below the level. Neither of them receives the use of stones and gravel in order to pockets with republican gold. Within will soon be carried on in that region. June to September is from 20 to 25 the use of stones is to sheathe the gizzard the next three months these matters will He states that a company has been inches. The soil is rich and from 6 to 30 in order to fit it to break into smaller be fully discussed before the people. Let organized with a capital of \$75,000, under feet deep. It seems like a lake deposit, fragments the hard, angular substances them listen to reason, and all will be well. the name of Banana Food Company, for and it differs from all other parts of which might be swallowed. They have also been considered to have a medicinal Notwithstanding the rainfall, the plain effect. Others have imagined that they is covered with nutritious grass. As one acted as absorbents for undue quantities approaches, the edge of the Staked Plain of acid in the stomach, or as stimulants rises like a precipice. This wall can be to digestion, while it has even been seen at a distance of fifty miles. The edge gravely asserted that they contribute is serrated and cut into by the rain directly to nutrition. washes to such a degree it is evident the Repeated experiments, however, have wearing-away processs is going on rapidly. This extensive washing is the same kind as that to be seen in the edges of the Bad Lands of the Dakotas. The geologist easily estimates that the Pecos the usual food of fowls can be bruised and the Canadian, flowing around the without their aid. They do, however, west and north sides, and the Red, serve a useful auxiliary purpose. When Brazos and Colorado, heading near the put in motion by the muscles, they are eastern border, have already worn away capable of producing some effects upon great slices of the Staked Plain. The top the contents of the stomach; thus assistof a book resting on a flat table gives a ing to grind down the grain and separatgood idea of the Staked Plain. This ing its parts, so that the digestive fluid or gastric juice comes more readily in contact plain, taking it from the top downward, consists of, first, porous sediment of soil, with it.-Hartford Times.

of or commented on by the 50,000 people who make Quito their home.

## History and Mystery of Playing Cards.

The origin of playing cards has been Part of the floor is composed of the and still is a disputed point. Some historians credit them to the Chinese, who, sands have been worn away by the conby the way, invented or popularized many of the ingenious devices now in The conditions are very curious to the common use. Some antiquarians attriscientist, but the main question with a bute them to the Hindoos, who are very practical generation is about the water skillful players at a card game in which condition of this great plain. Running ninety-siz cards are used, which makes eight suits of twelve each. The story stream on the vast plain. It is a bright, that cards were introduced into Europe sparkling stream that suddenly breaks for the diversion and amusement of out of the ground, ripples over pebbly Charles 11., the mad King of France, has bottoms for a distance of ten miles, and long since been disproved. They made then mysteriously disappears. How is this absence of running water to be accounted for on 50,000 miles of country their appearance in Holland, Britain, Spain and France long before the demented monarch was born,a fact which the editor of "Notes for the Curious" The answer is, the great capping strata of the Staked Plain are as porous as a bind the times cyclopedia makers, if they sponge. Every drop of water either care to change the old stereotyped falseevaporates of sinks downward through hood. The early European packs conthe soil. Until recent years the Staked Plain was considered utterly waterless. But there have now been dug into these But there have now been dug into these porous strata more than 1,000 wells. stood between the queens and the knaves. Besides these, the early Western devotees These wells do not flow, but the water of the game often used as many as twenty from them is pumped freely by windmills, cards with the same power that the and the Staked Plain is thereby made a "joker" of the present pack has. Some pasture for countless herds of cattle. writers claim that Western Europe was the first to use wood or ivory in place of parts of the Plain. Digging is no longer paper for cards, but Captain Dubois regarded as an experiment. The water mentions a Thirteenth Century pack of soaks into the ground and is stored in the Chinese cards "carved the one and the other from solide woode ; the figures on the same being carved alsoe insteade of painted on nutgals, which in most common.'

There was a great deal of history in the game of cards as originally intended. The four kings represented David, Alexander, Cæsar and Charlemagne. The queens were Esther, Judith, Palais and Argine. During the time of the American Revolution the soldiers whiled away the hours of camp life with cards which had the pictures of Washington, Franklin, Adams and Lafayette in place of the kings. A pack of these historical oddities is now worth many times its "weight in gold."-
