DR. CLAXTON AT THE EXPOSITION

Speaks in Praise of the Advance Made in North Carolina.

Dr. Claxton, the exposition guest of honor Friday afternoon, was introduced by former Mayor C. A. Bland who referred to his rapid rise in the realm of education to the fact that much of his early life and work was spent in North Carolina schoolroom.

Dr. Claxton began his address by expressing his appreciation of the honor of returning to this State after an absence of many years and witnessing such a remarkable growth in North Carolina's resources and especially its re-awakened enthusiasm for the cause of education.

Dr. Claxton reviewed his first trip into North Carolina 35 years ago, telling of poor railroad facilities with small towns where Asheville, Greensboro, High Point, Durham and other thriving cities now stand, with now and then a cotton mill, a tobacco factory or other industrial plant. In 1860 there were 116,000 white men of voting age in the State and 124,000 of them went into the army, of whom 24,000 did not come back.

Cotton was worth 4 1/2 cents a pound. "That was when the old state was dying and the new state was being born," Dr. Claxton said, adding that most people were looking backward, but some were looking forward. The first graded school to survive was started in Goldsboro in 1881, Wilson, Wilmington and Durham followed the next year, with Winston-Salem a year later.

Forty years ago the salary of the school teacher averaged \$51 a year and the term lasted two to two and a half months. In 1880 all of the higher institutions of the state were run on \$56,000 a year.

EDUCATIONAL REVIVAL

He recalled that it was his great good fortune to work with Aycock, McIver, Joyner, Winston and later Dr. Alexander Graham in the development of educational facilities in the state. Dr. Claxton said that in 1888 in Raleigh he made the statement that he would like to see \$5,000,000 a year spent on education in this state and was laughed at. Last year \$14,000,000 was appropriated, he said.

In 1868 a man from Mecklenburg got a bill through the legislature providing for expending \$250,000 in the county to build good roads, but it was 10 years before that man Alexander was able again to go to the legislature, Dr. Claxton said.

In education, North Carolina is just making a start, said the speaker stating that he had long thought North Carolina was the most progressive state in the south. A westerner told him once to say in the nation. He agreed, he said, adding that this state is going to work with more rapidity and certainty than in any other state.

EDUCATION AND WEALTH

Speaking of the objective value of education, Dr. Claxton said that people engage in various activities that they may increase wealth and the only means to increase wealth is better education of the people.

Dr. Claxton said that while he was in Greensboro he asked himself the question of why one state or nation is richer than another. He took natural resources as a basis of applied it to many nations and states, finding many large nations with ample resources that were poor, with other small and with few natural advantages, rich and progressive.

Dr. Claxton used the Bible figure of the prophet who asked the woman to make him a cake with a little oil and meal she had left. She made it and then made cakes for herself and her son, having the same amount left. That old prophet spouted on her for several weeks that way. But that figure is the ideal of education, in spending for education, there is not only the same amount left, but the increase is many fold, he said.

When he came to North Carolina many said the atmosphere of this state was not suitable for spinning yarn and weaving cloth, Dr. Claxton said, adding that the atmosphere is changed. "I would like to come back to North Carolina 20 years from now and see every boy and girl have a free and full opportunity for education."

"The greatest enterprise is making men and women," said Dr. Claxton, who spoke of the development of the state school system from its beginning in 1823, revising it in 1852 and up to the present time, saying that it is the most American thing the state has, that it is fundamental for democracy for all of the people to pay in proportion to their ability in order that all children may have full, free and equal opportunity for education.

STATE'S NEW PROGRAM

Last year North Carolina paid more into the federal treasury than she has paid in the 27 years of the state's existence for education, Dr. Claxton said, adding that the state must double yet what it has been paying. Some say wait until the federal taxes are reduced, that it is too much at once, along with the road program and other activities. All go hand in hand and are supplementary. The state can't build roads and bridges without doing more for education, Dr. Claxton said.

Dr. Claxton drew his picture of his ideal of school facilities, with a 10-month term, well equipped elementary schools, plenty of high schools with modern application, fully equipped colleges and universities, both state and denominational, until every man or woman may become fully developed, make their own support, live clean lives and contribute their part toward making the state a better place in which to live.

EXPLORER OFF FOR SOUTH SEA

Shackleton Starts on Two-Year Cruise for the Antarctic Regions.

London, Sept. 17.—(By the Associated Press)—Quest, the small ship on which Sir Ernest Shackleton will explore the uncharted sections of the South Atlantic, the Pacific and the Antarctic seas, left the Thames today on the start of her two-year voyage.

Large crowds gathered on the docks to wish Sir Ernest and his party a successful voyage. The voyage of the Quest, the little 200-ton ship which is carrying Sir Ernest Shackleton and his party to frozen mysteries in the South Polar Seas, has for its objectives not only geographic research but the exploration of a petrified forest and the location of a "lost" island—Tuanaki—the adjacent waters of which have not been sailed for more than 90 years. In 1917 the Quest was the first to sail the ocean plateau surrounding Gough's Island in an effort to determine the truth regarding a supposed underwater continental connection between Africa and America.

Nineteen persons, representing each of the British self-governing dominions, are expected to be aboard when the tiny but staunch craft, "built for tight corners," leaves the Thames today on Africa, for two years of buffeting its way through the Antarctic ice.

The Quest, which uses both sail and steam, and which may cover more than 30,000 miles before its return home, was constructed according to the personal ideas of Shackleton, who has made several voyages to the Antarctic. He commanded the British expedition of 1907-09, which reached within 97 miles of the South Pole and also the expedition of 1914-15 to Weddell Sea. His present ship is 111 feet long, 25 feet beam and 12 feet in depth. She was built in Norway and has been tested in heavy ice. Her sides are two feet thick and her bows are of solid oak sheathed with steel.

Her steaming plant, which has a radius is 5,000 miles and under sail in a stiff breeze the Quest can make eight knots. She carries wireless equipment and an airplane with a 25-foot wingspread. She has a glass-enclosed bridge and a lookout that resembles a flour barrel.

Major C. R. Carr, an English soldier of fortune, the aviator of the expedition, plans to fly above the Antarctic ice to scout out passages between the fjords through which the Quest may pass. He is also the photographer and naturalist of the expedition. The Quest was ever built. The other two were flown, respectively, by Colonel Borton V. C., the pioneer flyer from England to Mesopotamia and by Sir Ross Smith, the first man to fly from Australia to England.

Other members of the Shackleton party, besides those already mentioned, include Frank Edlid, second in command; Frank Worsley, commander; Major A. H. Macklin, biologist; R. Stenhouse, lieutenant commander; Captain L. Hursey, meteorologist; J. S. W. Marr and N. E. Mooney, cabin boys.

The petrified forest that will be explored was found by Shackleton on the island of Trinidad at a certain point where he landed from Captain Robert F. Scott's ship, the Discovery, more than 12 years ago. Gough's Island is eight miles long and 4,000 feet high and in 1907, when visited for the first time on record by members of the Bruce expedition, was found to have at least four hitherto unclassified species of birds. Tuanaki, the "lost" island, has been mentioned in geological records but apparently has disappeared. A spot in the Pacific where it is supposed to be will be dredged for evidence to show that it is recently submerged land.

There is already in the South Polar regions, another British expedition. It is led by Commander John L. Cook, who left Norfolk, Va., on October 27, 1920, for a six-year voyage in the ice fields. The party is aboard a 7,000-ton whaler, the Thor I, and three auxiliary ships and numbers more than 100 men. One of its purposes is the commercial development of the mineral wealth of Antarctica.

EXHIBITORS WILL BE DINNER GUESTS

Exhibitors at the Made-in-Carolinas Exposition will be guests at the luncheon to be given by the Charlotte Chamber of Commerce in honor of Governor Cooper at the Selwyn hotel Monday at 3 o'clock, according to arrangements made Saturday by Business Manager T. T. Allison.

Reservations for the luncheon have been made by about 250. Mr. Allison announced that short talks are expected to be made at the luncheon by some of the exhibitors, in addition to the address by Governor Cooper.

The Palmetto State executive will be the chief figure of "South Carolina Day" Monday at the Exposition. He will speak from the bandstand in the amphitheater in the rear of the building at 3:30 o'clock Monday afternoon.

Mr. Allison called special attention to the selection of the Selwyn hotel as the place for the luncheon, fearing that some might look for the affair to take place at the Chamber of Commerce.

BEFORE AND AFTER CHILDBIRTH.

Mrs. Williams Tells How Lydia E. Pinkham's Vegetable Compound Kept Her in Health

Overpeck, O.—"Lydia E. Pinkham's Vegetable Compound helped me both before and after my baby was born. I suffered with backache, headache, was generally run down and weak. I saw Lydia E. Pinkham's Vegetable Compound advertised in the newspapers and decided to try it. Now I feel fine, take care of my two boys and do my own work. I recommend your medicine to anyone who is ailing. You may publish my testimony if you think it will help others."

Mrs. CARRIE WILLIAMS, Overpeck, Ohio. For more than forty years Lydia E. Pinkham's Vegetable Compound has been restoring women to health who suffered from irregularities, displacements, backaches, headaches, bearing-down pains, nervousness or "the blues." Today there is hardly a town or hamlet in the United States wherein some woman does not reside who has been benefited by it. That is why Lydia E. Pinkham's Vegetable Compound is now recognized as the standard remedy for such ailments.

Exposition Notes

CARS OVERCROWDED.

The Southern Public Utilities Company now has one of the interurban cars on the short-length track for transporting visitors from the Hoskins car line to the Exposition building. The trolley car, which was used the first three days, was usually overcrowded on its trips to and from the Exposition building and much inconvenience, consequently, was caused passengers. The big interurban car is capable of accommodating twice as many people comfortably.

The trolley car left the track as it was rounding the curve near the Hoskins car line Thursday night. Only the conductor was aboard it at the time. It was removed from service and Friday morning the interurban coach replaced it.

CHILDREN INVADERS BOOTH.

The Exposition proved a more interesting novelty to the thousands of school children Friday afternoon than a county fair. Virtually every booth was invaded, and nothing escaped close inspection by Charlotte's future citizens. Many souvenirs were given out at various booths and these went like hotcakes.

MACHINES ATTRACTIVE.

The booths at the Exposition which are attracting the most attention are those in which machinery is in motion. The Made-in-Carolinas management has called this fact to the attention of exhibitors, and it is expected that in future years booths with action will predominate at the Exposition. The Carolina Tobacco Company booth has perhaps drawn the largest crowd because of the operation of big machines engaged in the manufacture of cigarettes.

SATCHELS GIVEN AWAY.

Twenty-five hundred school satchels were distributed by the Chapin-Sack Cream Company. The school satchels created the booth as "the velvet kind" manufacturers gave out the book-carriers. Miss Mammie Jones, of Shelby, supervised the distribution of samples of marshmallow cream, peanut butter, candies, salted peanuts and potato chips made and packed by the Lane Packing Company, of Charlotte. The Lincoln Ice Cream Company booth was another place where the children were treated to cream delights disappearing with marvelous rapidity. Samples of salad were distributed by Mrs. H. C. Duke, originator of Duke's home-made mayonnaise. The Duke factory, located at Greenville, S. C., is the result of a small and inconspicuous beginning, and has the distinction of being the only plant to bottle home-made mayonnaise successfully.

DR. CLAXTON INTERESTED.

Dr. P. P. Claxton, former Federal Commissioner of Education, made a tour of the booths after he had completed his address at the Made-in-Carolinas Exposition Friday. Dr. Claxton marveled at the progress North Carolina has made since he first came to the State in 1882. That such a variety of articles are manufactured in this state was a pleasant surprise to the former Tar Heel.

Manufacturing enterprise and artistic merit are both demonstrated at the booth occupied in the exposition by the Hood Brick Company, which has an interesting display of its products on exhibition. It is in the folder handed out by the company that real artistry of a high quality is shown. The folder is illustrated with drawings by T. W. Pritchard, a Charlotte man who is rapidly forging his way into recognition as a leading artist. The folder was both originated and designed by him. It has won many complimentary remarks from visitors to the exposition, as has also the booth it represents. Mr. Pritchard is specializing in commercial art.

FREAK HOG ARRIVES AS AN EXHIBITION

Mr. Morris Barfield, from Mount Olive, has arrived in the city from Hickory where he has been exhibiting the wonderful freak two-legged hog which he had on exhibition in Charlotte some weeks ago.

The characteristics of this hog are that it has no hip joints, hams, hind legs or tail, but walks and balances itself on its two front feet while walking. The feats that it performs while in the act of walking are similar to the tactics employed by an acrobat in the art of walking on his hands.

The hog is seventeen months old, weighing approximately 130 pounds, is in perfect health. It has been examined by the local veterinarians in Charlotte and everything claimed for it by its owner has been found to be true. This hog is a native of Sampson county having been raised by a Mr. George Tyndal, of Clinton. Mr. Barfield has his hog on exhibition at the Carolina's exposition as a "Made in Carolina Exhibit."
