Sweden's "More Money" Experiment.

The theory that a decree of the government can give intrinsic value to money metals has been exploded in the tion is afforded in the history of Sweden under the reign of Charles XII, known as the "mad king." Baron Gortz was the leading spirit, or rather the power behind the throne and minister of finance. War had impoverished Sweden, and the baron devised the brilliant scheme of making more money by attempting to give copper the same value as silver, so that a piece of copper money whose intrinsic value was only one-half penny should, when stamped with the king's mark, pass for 40 pence. Some of this coin was stamped with the figures of heathen gods, and later on the people in derision called the pieces the "gods of Baron Gortz."

At first this money was issued with discretion and reserve, but, as might have been foreseen, it was hard to draw the line and fix the quantity, and it soon got beyond the baron's control. All kinds of goods and provisions rose to inordinate prices, and the baron was foreed to increase the value of his money to meet the demand and volume of trade. home is common property.
