

Leonard Is Sentenced To Five Year Prison Term After Conviction In Court Here

Order Verdict Fright After Deliberation Several Hours.—Noticed Filed.

When court opened Friday morning there were indications that the case would be given to the jury during the afternoon. The State had practically concluded its rebuttal when court recessed Thursday afternoon and the presentation of this evidence required only about an hour this morning.

After the defendant declared on the stand Thursday that George Vogler was driving the car at the time of the accident, his mother and father, Mr. and Mrs. J. H. Leonard, took the stand, followed by their son, Harry. They said the first time they saw Leonard after the accident he told practically the same story he told on the witness stand.

George F. Klutz, of Concord, was one of the defense witnesses and he stated that when he reached the scene of the wreck soon after it occurred, Vogler and Mrs. Claude W. Davis were together. He said Leonard was not on the front seat of the car and that he heard Vogler say to Mrs. Davis, "Dearie, let's get away from here."

Vogler was the first rebuttal witness for the State. He said he drove Leonard's car from Charlotte to Salisbury but turned it over to Leonard at Salisbury. He denied that he drank home brew at the Davis house before the party left for Salisbury, declaring that Mr. and Mrs. Davis said they would ride with Leonard, who had been drinking and that Leonard asked him to drive.

He did not drive toward Derita, Vogler said, but went directly from Charlotte to Salisbury. In Salisbury, he said, Leonard bought some liquor and it was after drinking some of this that Leonard demanded the keys of the car.

Vogler said he carried Mrs. Davis from the wreck because he saw her first after the crash and because she said, "I am dying." He did not look for Davis and Leonard he said on cross-examination.

Under cross examination he said his home had been raided since the wreck and a quantity of home brew found there. He also said he had been previously indicted for violating the prohibition law. He also said that he had been discharged by the Seaboard Railway following the accident.

He denied that he called Mrs. Davis "Dearie," and said he had never seen Mr. Klutz until the latter stood before him in the court room.

Davis corroborated Vogler, adding that he did not see the Gentry car before the crash because he had laid his head on his wife's shoulder and was dozing when the accident occurred. He said at the time he and his wife were on the back seat of the car and Leonard was driving.

HOW TO LIVE 125 YEARS.

Review of Reviews.
Dr. Serge Voronoff believes that the average healthy human being should live 125 years. He is the man who would make old men young again by means of his now famous monkey gland operation. None of his patients has yet reached the century-and-a-quarter mark—it is too soon for that. But Dr. Voronoff insists that his work has restored a measure of youth to old persons; and in a series of articles for the London Graphic he explains how and why this can be.

The idea is that all deaths occasioned by no other cause than "old age," and that mental and physical weakness due to advancing years without disease complications, are almost invariably due to the premature weakening or atrophy of the endocrine glands, without which the body even when otherwise healthy, cannot function. Dr. Voronoff compares these glands, upon which all other glands depend for vital fluid, to the spark in the motor of the automobile.

The average human being, Dr. Voronoff asserts, does not die a natural death. "Those who die in their early eighties, for instance, of either accident or disease, die through the failure of their endocrine glands to furnish generative energy to the principal organs of their body; and, as this condition is almost always brought about by unnatural living, death in such circumstances is preventable by the removal of the cause."

This is done by grafting healthy young glands from monkeys of the highest type, preferably chimpanzees, in place of the weakened or atrophied ones of the human being. The difficulty, not to say impossibility, of obtaining human "spare parts" for his work forced Dr. Voronoff to turn to the animals, and the difference in the callipers of all but monkey blood and human blood precluded the success of grafting the glands of any other animal onto the human body, as such grafted glands would promptly die.

It is a preposterous absurdity to think that the monkey glands will in any way affect our natures, Dr. Voronoff asserts. The cost of monkey-glands, which has hitherto been almost prohibitive, should become less in the future, as Dr. Voronoff has established a monkey-farm at Grimaldi on the Mediterranean coast from which monkeys can be transported to his laboratories in Paris safely and quickly; close watch can also be kept over their health in this way.

Not only do abused or atrophied endocrine glands shorten human life, but they are often the cause of thyroid insufficiency or atrophy, which invariably causes idiocy. When endocrine lack is the cause, grafting produces remarkable results. Often, of course, thyroid atrophy comes from other causes; in this case the thyroid gland itself is restored by grafting. The first thyroid-gland graft was performed in 1913 on a fourteen-year-old total idiot; he was accepted by medical authorities and sent to the front as a normal young man when the war broke out.

The first endocrine gland grafts were performed on animals; a ram twelve years old, the average span of life lived by sheep, was grafted and resumed life as an equal among much younger members of the herd. Later on, the glands were removed; the ram aged rapidly and was shortly at the point of death. A third operation was performed, re-grafting the gland, and the sheep is still healthy and "young" eight years later.

"I shall remember for the rest of my life how I trembled with anguish a few moments, before I performed my first 'rejuvenation' of a human being, in 1920—despite my conviction that there was no possible danger," writes Dr. Voronoff. Since then over 1,000 successful gland grafts have been accomplished by him and by doctors all over the world who are students of his methods.

The general effect has been to restore to men of seventy or over the muscular power they possessed twenty years before. In many cases, improvement in mental condition as well as in health has been reported. One woman also has undergone an operation for gland graft. Although it was in every way a success, and the woman greatly restored in health and looks, the operation in women is far more serious than in man, and Dr. Voronoff prefers to spend his time, therefore, where more and quicker results can be obtained, for the purpose of perfecting his method and broadening his field.

ONLY LIVING QUADRUPLETS!

America's only living quadruplets are vacationing in Los Angeles. Here they are: Roberta, Mona, Mary and Leota Keys, twelve-year-old daughters of Mr. and Mrs. F. M. Keys, of Hollis, Okla.

Girl Quadruplets Far Ahead of Their Class

By DIXIE SHELBY,
International Illustrated News Staff Correspondent.

SCIENTISTS have it all figured out that quadruplets occur but once in some 400,000 cases. Just what the percentage is where all four babies are girls isn't known, but it's so rare as to be almost in the miracle class. And when you consider that the four girls are all alive and healthy at the age of twelve—well, it doesn't happen once in a blue moon, that's all!

The quadruplets who merit special attention are the daughters of Mr. and Mrs. F. M. Keys, of Hollis, Okla. So far as is known, they are the only quartet of the same sex born. What is more, they have never been ill in all their lives.

The girls are Roberta, Mona, Mary and Leota Keys. They were born on June 4, 1915. With the exception of Leota, who is a blonde, the others are brunettes. They are of almost uniform size and appearance, and furnish their parents with plenty of perplexities in trying to distinguish them from each other.

FAR AHEAD.
The quadruplets in their intelligence and educational ratings are far advanced for students of their age. They play hard, study regularly, go to bed early, arise early, help with the household work, vary their musical instruments, take long hikes and are fond of swimming, riding and other forms of outdoor exercise.

There have been a number of cases of quadruplets where the children were of both genders. In most instances, however, the foursome was broken up by early death.

A sixty-two-year-old Venezuelan woman gave birth to five normal children within eight hours. This was in 1922.

Trustworthy cases of quintuplets and sextuplets are rare, however. There are but two authentic cases of the latter in the United States. On December 30, 1831, a woman in Droplu just motored to Southern California, who lived long enough to be baptized the same day, but died that evening.

The Boston Medical and Surgical "angles."

WORLD'S RECORD.
What's supposed to be the world's record—only, unfortunately, definite proof is lacking—is believed to have been held by the Countess Margaret, daughter of Florent IV, Earl of Holland, and wife of Count Herman of Henneberg. The event is supposed to have taken place on Good Friday, 1278, according to Dutch folk-lore.

The Countess, who was forty-five years of age at the time, was credited with bringing forth 265 infants at one birth!

If that record could be proved, it would make the Keys' quadruplets pale into insignificance. In the meantime the four pretty girls are showing that multiple births are far from a hindrance to their social or educational progress. They have just motored to Southern California, where they're having a wonderful time on their vacation, with the four other Keys children, all of whom are "angles."

"Uncle Josh Says."
The things which hurt, instruct.
The sting of a reproach is the truth of it.
He that won't be counseled, can't be helped.
Trouble springs from idleness; toil from ease.
He than can have patience can do what he will.
Do not do that which you would not have known.
Friendship increases by visiting friends, but by visiting seldom.
Nothing brings more pain than too much pleasure; nothing more bondage than too much liberty.
A certain amount of audacity goes with genius, but too much gall kills it.
Love will not make the family budget balance.
Get ahead, by all means, but not by any means.
