## The Plague of the Fourteenth Century.

There was one disease called the black death, the black plagne, or the great mortality. The most dreadful visitation of it was one that began in China, spread over Asia, and in the year 1348 entered Europe. Europe was then, however, not unused to plagues. Six others had made themselves famous during the preceeding eight-and-forty years. The black plague spread from the South of Europe to the north, occupying about three years in its passage. In two years it had reached Sweeden ; in three years it had conquered Russia. The fatal influence came among men ripe to receive it. Europe was full of petty war ; citizens were immured in cities, in unwholesome houses overlooking filthy streets, as in beleaguered fortresses ; for robbers, if not armies occupied the roads beyond their gates ; husbandmen were starving feudal slaves ; religion was main-

ly superstiton ; ignorance was dense, and morals were debased ; little control was set upon the passions. To such men the pestilence came, which was said to have slain thirteen millions of Chineese, to have depopulated India, to have destroyed in Cairo fifteen thousand lives a day. Those were exagerated statemen's, but they were credited, and terrified the people. Certain vessels with dead crews drifted bout in the Mediterranean,and brought corruption and infection to the shores on which they stranded. In what spirit did the people, supersritious as they were in those old times, meet the calamity! Many 1 24, The Pope can decide beyond the
