Farmers To Grow Dyestuffs.

It may be of some interest to the people of the state to know that before the Revolutionary War the production of Indigo was a leading industry in N. C. and S. C. In 1777 over a million pounds were produced in the Carolina's for the purpose of making the dyestuffs that we now get, or fail to get, from Europe.

Economic conditions caused the production of this crop gradually to cease, but the Commissioner of Agriculture of North Carolina feels that the recently changed economic conditions furnish a very strong argument in favor of reviving this abandoned industry among the farmers, and thus not only render our textile manufacturing industry in-

dependent of Europe but put into the hands of our farmers whatever profits might accrue from the production of the plants from which the dyestuffs are made as well as the cotton from which the cloth is made as well the pork.

The Commissioner, therefore, advises the growth of Indigo, in a small way, at least, among the farmers of the state during the coming season. Seeds may be secured from the leading seedmen and instructions for growing the crop may be secured by application to the Commissioner of Agriculture.
