Mr. and Mrs. W. G. Petree and children spent last Thursday in Winston-Salem.

FARM DRUDGERY LESS CHURCH SOCIAL WITH

300,000 Farms Lightening Work by Electrical Means.

On Others Women Carry an Average of Forty-five Tons of Water Every Year.

Old fashioned drudgery without any social compensation is decreasing among the farms of America. This can be positively stated after examining a survey of farms made by electrical interests. The chief revelation of that survey was that one-tenth of all the farms of the United States are equipped for electrical operation.

sounds significant to say that 300,000 farms are now "doing it elec-But it sounds even more significant to state that there are 2.700,000 other farms where electricity

On these latter the old burdens are borne in the old way. The women feel them probably more than the men. Any farm woman who has reached middle life and who has never had an electrical appliance in her house knows how drudgery can kill the spirit.

The investigation mentioned brought out certain information. It was found that 61 per cent of the farm women on unelectrified farms carry water from the well every day and average about forty-five tons of water a year. Often the women assist in the dairy work of the farm, and 88 per cent of them wash the milk pails, while 65 per cent clean the cream separators.

In their daily housework-the same sort of work that city housewives perform-94 per cent of the women do their own baking and 95 per cent of them do their own sewing.

They cannot fall back upon the convenient corner bakery or grocery for a loaf of bread or a dozen or so of rolls. Neither can they readily call in a dressmaker when they want to have new clothes. And on most farms the noonday meal is the big meal of the day, representing an appalling amount of labor. Then, if ever, they need a power aside from their own hands if black drudgery is to be overcome.

On farms where electric power has been put to work the story is not what been put to work the story is not what it used to be. And the spread of the electrical idea among farmers is brightening the future for young farm wives just "setting up" with their hus-bands, so that these young women may avoid the bowed backs and untimely traces of advancing age which their mothers and their grandmothers

The new emancipation, most observers will say, is going to come among those 2,700,000 farms where electricity has not yet taken up its abode.

BIG SURPRISE FOR ALL

Electric Lights Brought About a Regular Transformation.

and social that has occurred in years in a certain town in the middle west rural community in the center of a farming territory of considerable ex-

Because of the scattered population the church supper is one of the annual occasions when everybody meets everybody else and a whole year's supply of gossip is exchanged in the course of a single evening. More than that, however, the supper enjoys a big reputation. And when the last one was announced the whole countryside

planned to be on hand. suspended from various points about the building, were a number of gleaming electric lights, replacing the battery of kerosene lamps with which the church had previously been lighted.

The curious farm folk soon discovered the "system"—a self-contained farm electric light and power plant, consisting of the gasoline engine, an electric generator, the necessary wiring and the Mazda lamps. It was a contribution to the success of the social by the town's electrical supply agent, and it certainly made a hit. The whole church was filled with the brightness of the lights, and the so-cial atmosphere was greatly increased

NEW TOY TO AMUSE CHILDREN IS NOVELTY

The children in many homes are finding amusement through various electrical inventions. There is, of course, the miniature electric train and the miniature electric range, ap pealing respectively to boys and girls

Recently there has also appeared a simple but fascinating little toy con sisting of a little balloon with a tiny trapeze suspended from it, to which is attached a dainty acrobatic girl. When held over the tube of the electric va cuum cleaner long enough for the cur reat to be turned on the rush of an from the tube will both keep the bal loon suspended in the air and wil cause the little performer to whir about on the trapeze to the great de light of small folk of 7 or 8 years
Little electric current is required for this amusement to keep a child pleased North 15 degrees East 125 feet.

North 11 degrees West 182 feet. er a long period.
