### HANGING ROCK LOOMS NIGH

GRADING WITHIN 1,300 FEET OF GOAL — HEAVY BLASTING NEAR LICK HOLLOW DELAYS PROGRESS — PROJECT OF INTEREST TO TOURISTS AND VISITORS.

The end of the Hanging Rock new road is approaching, though no work has been done for several days except drilling, the ledges of rock near Lick Hollow halting the progress of grading.

R. R. King, who has been supervising the work, tells the reporter that 13,800 feet of the project have been graded, and that only 4,200 feet remain to be done.

A small force of hands at work drilling and blasting on the trail near Lick Hollow, but no grading has been done for more than a week.

Sunday afternoon Chas. Munch, of Thomasville, who owns most of the land adjacent to Hanging Rock, was up and visited the development, expressing himself as highly pleased. It is learned that Mr. Finch is furnishing considerable dynamite, tools and other equipment in the work, at his own expense, and is giving all the assistance he can to the R. F. C. forces who are performing the major part of the work. The forces have been assisted to some degree by the State convicts, loaned by Chairman Jeffress.

Many cars of tourists and sightseers now traverse the new road on week ends, and express their interest and pleasure at the scenic attractions.

### LOOK OUT FOR STARS TO FALL

SHOWER OF METEORS EXPECTED TUESDAY, WEDNESDAY OR THURSDAY NIGHT OF THIS WEEK — THE SHOW WILL PROBABLY BE AFTER MIDNIGHT IN THE NORTHEAST SKY.

Danbury people are watching for the stars to fall one night this week — probably Tuesday, Wednesday or Thursday night.

The shower of expected meteors will probably be in the Northeast sky, and will occur between midnight and day.

That is — if it comes at all.

It was predicted last year but failed to arrive.

These showers of what the astronomers call Leonids are due three times in a century. One hundred years ago this Wednesday in the year 1833 they fell, and for more than an hour blazed through the elements, frightening many people.

There is no danger in the Leonids, which travel so fast that the atmospheric friction burns them up. None has ever been reported as striking the earth. They are said to be composed of the same material that bones are made of and contain bits of iron and calcium.

History records that 20 times since the year 902 A. D., the Leonids have been mistaken by some persons as the end of the world.
