OUR ALLIANCE COLUMN.

The Farmers Discuss the Railroads in Missouri.

Eight Crisp Reasons "What the Alliance is Here For."

In the National Farmers' Congress at Sedalia, Mo., Congressman John T. Heard, of Missouri, delivered an address on railway transportation, which, he said, was a subject of supreme importance to the farmer.

One of the solutions was found in State railway commissions. Missouri had been among the first of the States to deal with the question that way, and Missouri's experience showed that the method had been successful. Another method of controlling a railroad corporation in the interests of the people was through the national railway commission. Some professed to believe that a railroad should be placed under Government management. Government railroading, he believed, would be a gigantic failure. In the first place the Government would have to buy the railroads, and that would cost \$10,000,000,000. That would be impossible and impracticable, because there was in circulation only \$1,500,000,000.

H. C. Brown, of Georgia, endorsed everything that he had heard said. Georgia, he said, had tried State ownership of railroads. Georgia owned the Western and Atlantic Railway. Under State control the rates were high, the service was bad and deficits were extraordinary. The State found that it had been too expensive to run its own railway, and the line was leased to private individuals. Under private control the road charged cheaper rates, gave better service, paid a rental of \$3,000 a month and made money for the lessees.

Resolutions were introduced recommending that the President of the United States and United States Senators be elected by a direct popular vote; demanding an extension of the signal service reports issued by the agricultural department; requesting the Federal Government to aid the States in the irrigation of arid lands. The resolutions were all adopted with the exception of the latter, which the Congress defeated by 44 to 17.

A resolution asking Congress to improve the harbor of Savannah was loudly applauded and unanimously adopted. The committee on finance presented a report requesting the various State Legislatures to make appropriations for the expenses of State delegations to future congresses of this character in order that each State may have full and proper representation. The report was adopted.

The administration of the department of agriculture by Secretary Rusk was highly commended in the resolution. The following additional resolutions were also adopted: Requesting the Secretary of Agriculture to increase the number of representatives in foreign countries to push the work of introducing American corn as food, believing that marked success in that direction attained already is warranted for such a request, and requesting Congress to appropriate sufficiently to cover the expenses of this increased representation abroad; demanding a systematic and thorough improvement of the waterways and harbors of the United States; requesting the extension of the delivery of the mails among farmers; demanding the control of all trust and monopolies, so that they shall work no harm to the people.

WHAT THE ALLIANCE IS HERE FOR.

The Alliance is seeking to make the rich man pay his proportion of the taxes.

It is seeking to pay up the bonds that have almost ruined the people and nation.

It is seeking to forthwith reduce the salaries of officials to an equal of other salaries and prices.

It is seeking to break up the speculator's corner in grain and pork.

It is seeking to make it possible for a poor man to get money as cheap as a banker can get it.

It is seeking to have the government issue all money in sufficient quantity to do the business of the country.

It is seeking to watch the Congress from the people's side for the next 25 years.

It seeks to make a profit in farming and industry and not in money-lending.

It attacks the giant monopoly and it intends to follow him to his overthrow—Vindicator.

The Raleigh Progressive Farmer says "That the growth of the Alliance has been too rapid to keep track of during the past month."

"There has been a net increase of 400 members in the Alliance in Oklahoma, 62 Sub-Alliances have been formed in North Dakota with a net increase of 2,000 members, Iowa is said to be 'doing some glorious, aggressive and successful work' with 9,000 new members of the Order, 14 counties have been organized in California, an increase of 1,000 members is reported from South Dakota, West Virginia is credited with 10,000 new members, and of Ohio it is said that 'the Buckeye State heads the list' with 13 new counties organized with 170 Sub-Alliances and an increased membership of 10,000. Mississippi is credited with a net increase in membership of over 1,000 since December 1, 1890, and the growth of the Order in Louisiana is put down at 500 members. The following statement is made in regard to the situation in South Carolina:

"Twenty-two new Sub-Alliances have been established, with about 1,000 new members, but a loss of nearly as many have been sustained. This is the only State recently heard from in which an increase in membership is not reported."

Jay Gould says he "can buy the vote of a farmer member of the legislature for the price of a bull calf." Again he says, "I can hire one-half the farmers of the United States to shoot the other half to death."

Upon four and one-half acres of land a

colored planter near Fort Gaines, Ga., raised five bales of cotton this year. He finds it profitable to raise cotton at five cents a pound, and his name is Henry Johnston. He is shrewd enough to hold his crop for a rise in the market.

Oil from American corn is being used by German soap manufacturers. The farmers of this country have not only to feed Europe but to wash Europe's face.

SCIENTIFIC AND INDUSTRIAL.

Boston, Mass., has the largest fly-wheel.

Tiny incandescent lights are now made for surgical uses.

Electric welding has been applied to the manufacture of projectiles for light guns.

Two Maine women have discovered an acid that bleaches wood pulp designed to be used in the manufacture of paper.

The Calumet and Hecla Works have a capacity of which will be 250 tons per month.

When you are floating through ice fields in the ocean you go very slowly. The Jeannette drifted through the Arctic Ocean at the rate of two miles a day.

The wear upon Cape Cod, Mass., coast is shown to be at the rate of 755-756 cubic yards per year, or an annual wear of the coast equal to a distance of about eight feet.

G. W. Dana, the California naturalist, has collected over 70,000 insects belonging to the horn-winged family, 5000 of the cricket tribe and about 4000 butterflies, and numerous rare plants and animals.

A rack railway seven miles in length is under construction on the Usui Mountain, Japan, to connect the terminus of the State railway at Yokohama and Kurisawa. There are twenty-one tunnels, 12,200 feet in length in all, along the line, and the steepest grade is one to fifteen.

A recent improvement in making barrels consists in making each alternate stave of soft wood and somewhat thicker than the others. When the staves are put together and the hoops driven down, the hardwood staves are thus crowded into their softer neighbor, making a tight joint.

A new saddle has series of spring connecting the upper saddle-tree, or seat, with the lower, to relieve the rider from constant jolting. The springs are cone shape, working within each other, are of tempered steel, so as to work freely wherever the motion of the horse may bring the weight of the rider.

The hair that is taken from hides at tanneries has found a new use. Formerly this hair was of little value. By a new process it is taken from the hides by a machine which at the same time cleanses it, and it is then baled and sent to the factory, where it is utilized in making cloth "all wool" and a yard wide.

A sixty-seven-ton gun on board the British armored vessel Howe has developed a defect in the inner tube similar to that recently found in one of the big guns of the English ironclad Anson, the flagship of the Channel Squadron. The Admiralty is greatly exercised over the repeated discoveries of defects in British guns.

The absolute conversion of tar into gas can now be effected without leaving any residue in a retort. The process consists in injecting a spray of tar by means of a Korting jet supplied with superheated steam into a red-hot retort half filled with coke. The gas has a high candle-power and does not need the use of expensive enriching material.

The injury of metallic sleepers from corrosion has been greatly overrated. Even in the damp climate of the Netherlands the loss from corrosion does not, it is said, exceed four per cent. in twenty years. Experience in India shows that metallic sleepers which are subjected to a special treatment before leaving the works are thoroughly to be relied on for efficiency and lasting wear.

The new artificial quinine produced by Messrs. Grimaux and Arnaud, of Paris, is mentioned as one of the greatest discoveries of the year. It is obtained by treating the base cuprein of a Brazilian shrub with sodium, then treating the resulting compound with chloride of methyl. The product is quinine absolutely identical with the substance that has become so familiar and so indispensable.

Meat-Eating Plants.

Notwithstanding the admitted fact that bits of meat, insects and other animal substances are more quickly decomposed in the leaves and other trap-like appendages of the pitcher plant, Venus fly-traps, sundews and various others of the so-called "insect-eating plants" than they are in open air, there is a body of scientists who deny that the plant itself has anything to do with the matter. These same scientists, who have frequently given their views to the world, deny the old supposition that the plants of the insect-eating kind even exercise vital power in capturing the prey which falls into their nets. The learned Dr. Morsetti is one of the skeptics. He says that the effect produced upon insects by these plants is a chemical change similar to that produced upon the skin and flesh of one who has come in contact with any poisonous plant or vine.—St. Louis Republic.

Six Legs and Two Tails.

A farmer living six miles east of Sarcoxie, Robert Schooling by name, has a pig with six legs and two tails. Four of the legs are on one side, each possessing a perfectly formed foot, while the extra tail is situated on one side. It can move the two extra legs about the same as the others, but does not use them in walking as they do not quite reach the ground. The pig now weighs about ninety pounds and its mates weigh nearly 300.—Sarcoxie (Mo.) Vindicator.

Kansas City, Kan., is to have a \$1,250,000 cotton-mill.

Wet Feet Cause Colds.

The dispensaries are crowded with women and children who have caught cold. The doctors have all sorts and degrees of rheum to attend to, from the sniffling, wheezing small boy to the coughing and straining old man. One of the physicians said to a Sun reporter: "If these people would only have sense enough to keep their feet dry they would be all right. I tell you that wet feet fill more graveyards than an epidemic of cholera. All the children that came in here to-day with swollen eyes and heads stopped up had wet feet. It's the same way with men. You would think that an intelligent business man would know enough to take care of himself, but he doesn't. The average New Yorker goes down town and tramps around in the wet until his feet are cold and damp. He gets into a perspiration and goes back to his office, where he takes off his coat and sits in his shirt sleeves. There is not an office in this city where there is not a draught, and that man will find that draught and sit in it. Then he sneezes a few times and says: 'I will catch cold if I sit this way any longer.' He does not appreciate the fact that he has caught cold already."

"When he goes home, instead of putting on dry socks and warm slippers, he takes a drink of hot whisky. Now, what connection is there between hot whisky and a cold in the head? None. He gets into another perspiration, and the chances are that he will catch more cold."

"With the women it is all the same way. Take the young girls you see tramping about in the mud of Fifth avenue and Broadway. Nine out of ten have got on low shoes. Is it surprising that they have colds? They have not had time to lay in their winter stock of foot wear, or else they think their feet look better in low shoes, and they wear them until the snow falls. But it is of no use talking. As long as the earth turns on its axis people will have colds."—New York Sun.

London Police.

The accompanying illustration gives a representation of an officer and a private in the Metropolitan Police Force of London. The government of this body,

which is the largest civic patrol in the world, is decidedly more military than obtains in any American city, for the Chief is a Crown official and receives inspiration from the British War Office.

The roundsman, who is familiarly known as a "Bobby," is not the dignified and imperious creature people in American cities are accustomed to obey. For a slight remuneration he will hail a cab or hold your horse, while a sovereign discreetly administered will grant the most hilarious roysterer immunity from arrest.

A Long Night Reduced.

The long Polar night will be henceforth more bearable to the 2000 inhabitants of Hammerfest, in Norway, the northernmost village of Europe. Electric light has been introduced into every house in the hamlet. The power is brought from three small streams a short distance from Hammerstein, whose currents are so strong and swift that the water does not freeze even in winter. The people of the town have reason, indeed, to be grateful to the inventor of the electric light. The long night begins at Hammerstein on November 18 and lasts until January 23, so that the artificial illumination will be of service for sixty-six days. On the other hand, it will be practically useless and unnecessary from May 16 to July 26, during which time the sun never ceases to shine.

Hammerstein lies in north latitude 70 degrees 30 minutes 15 seconds. At 67 degrees 23 minutes, north latitude, the longest night lasts one month; at 69 degrees, 51 minutes it lasts two months, and at 73 degrees 40 minutes, three months. The polar night is shortened and the polar day is lengthened by the refraction of light. The inhabitants of Hammerstein, in fact, have no real night between March 30 and September 12.—New York Tribune.

Substitute for Glass.

An Austrian inventor has produced a substance which he claims to be a good substitute for glass. It is produced by dissolving from four to eight parts of collodion wool in about 100 parts, by weight, of ether or alcohol or acetic ether, and with this are intimately combined from two to four per centum of castor oil, or other non-resinous oil, and four to ten per centum of resin or Canada balsam or other balsam (soft resin).

The compound when poured upon a glass plate and subjected to the drying action of a current of air of about fifty degrees Centigrade solidifies in a comparatively short time into a transparent glass-like sheet or plate, the thickness of which may be regulated as required. The sheet or plate so obtained has substantially the same properties as glass, as it will resist the action of salts and alkali and of dilute acids, and like glass is transparent and has no smell. On the other hand, it has the advantage of being pliable or flexible and unfrangible to a great degree, while its inflammability is much less than that of the collodion substitutes.—Boston Transcript.

What We Want

Is something to suit the times. Knowing so well as I do that crops are short and money scarce, I have endeavored, especially this season in selecting my stock of Toys, to get something nice

To Please the Children,

and the larger children as well, for the least money. My stock is simply immense and this means if they are not sold by Christmas I must take a "back-seat." All I ask is to get my prices and I am sure that you will buy.

WITH OUR HANDSOME TOYS

I have added also this season a beautiful line of Bronzed Statuary and Disk Figures of various designs, that will be sold close, which means that they must and shall go. Fireworks, Candies, Nuts, Raisins, Apples, Oranges and in fact everything for the holidays.

And Doll Baby Carriages,

Express Wagons and thousands of other things too numerous to mention. Don't forget my OYSTER DEPARTMENT where you will find the New York and New River Oysters, by either plate or measure. Groceries, Wood and Willow-ware, Tinware of every description. Best Sugar, Coffee and Butter, all cheap for cash.

JAS. D. DANIEL,
East Centre St., next to Odd Fellows' Building, GOLDSBORO, N. C.

A SPLENDID ARRAY

ELEGANT SILVERWARE

JUST RECEIVED.

The public are invited to call and see it and also to look at my varied stock of

Diamonds, Watches, Clocks and Jewelry.

Repairing of Watches and Jewelry a Specialty.

WATTS & WATTS.

Nowhere In This City

can economical purchasers get better, more, and even as much value for their money as at our house. We care not what article you may want to buy in the Grocery line, we guarantee to SAVE MONEY for you on the purchase at our house. We keep constantly on hand

FAMILY GROCERIES OF EVERY DESCRIPTION.

Our Store is supplied with every line of goods kept in a first-class Family Grocery store, which can be bought at the most reasonable prices. We also handle all kinds of heavy groceries, and every supply a family or farmer may need

Either Wholesale OR RETAIL.

Planters will find our stock of Field Seeds fresh and embracing every variety they may need. If you want the best planting potatoes you must come to us. It makes no difference what you may need in our line, come to our store and make your wants known, and you may rest assured that you will be supplied. BIZZELL BROS. & CO.
West Walnut Street (Kornegay Building)
GOLDSBORO, N. C.

YOU CAN'T

Please Everybody

Is a fact admitted by all who have tried, but we can please all who are seeking the

Best Goods for the Least Money.

In our store, which has just been replenished for the fall trade, you will find anything you want in the line of

FAMILY and HEAVY GROCERIES.

Our aim is to keep always on hand a FRESH STOCK of the CHOICEST Goods which can be found in the market. We also carry a large supply of the best and leading brands of CIGARS, TOBACCO and Snuff.

A LARGE STOCK OF BAGGING AND TIES JUST RECEIVED.

We guarantee to sell goods in our line TEN PER CENT. lower than any other store in the city.

Country Produce bought and highest market prices paid.

BROWN, LATHAM & CO.

A HAPPY WELCOME

Is guaranteed to those who will call at my Saloon, which is stocked

at all times with the Choicest of Domestic and Imported

Liquors and Wines.

All the Latest Drinks Compounded and Manipulated by Skillful Men.

DOMESTIC and IMPORTED CIGARS

And a Large Lot of Fine Tobacco.

FOR PURE NORTH CAROLINA CORN WHISKEY MY

PLACE IS HEADQUARTERS.
