## GREI N-BOROUGH WEDNESDAY AUGUST 80.

A hint to Drunkards.-The Grand Jury of this County, last week, presented a Juror for being intoxicated in the jury box, and the Court fined him fifty dollars ; the fine is to be re mitted to one dollar, if the Juror will prove to next Court that he has kept sober since the last terin.

The late anniversary of A merican Inde.endence was cel brated ar Pa is by a large party of American citizens. At the dinner, Mr. Barnet, the American Consul, presided, as sisted by Mr. Peabody. Among the guests, were Gen. Lafayette, G, W. Lafayette, Mr. Levasseur, and Count Lasateyrie. Count Sagur was prevented, by indisposition, from attending. Gen. Lay fayette was toasted, to which he reterned an appropriate adurcas.

Trugedy of Beauchamp.-The New* bern Sentincl states, that Mr. Joseph Hutton, of that place is engaged in writing a tragoly, foulded on the murder of Col. Sharp, the execution of Bcauchamp. \&c.

Early Crop.-'The Augusta Chrnoicle of the 12 th inst. notices the arrival in that place of a load of Cotton

ven bales. A nother load was daily
expected from the same plantationThe Cotton is said to be of a very superior quality, and was $r$ : ised on Whantation of Panl Fitssimmen. E. whose agricultural anterpriz and ability is sposen of in the high. pst terms.

The American Colonization Society received as Donations, the sum of 81.82 z , from April 1st, to July 26, 1826 .

C $n \mathrm{~m}$. Porter has resigned his com. misgion in the Nary of the Cnited States, and it has been accepted at the Navy Department. The Commodure has been appointed cominan. d. of the Mexican Navy, wilha salary of about \$2t.000.

## ELECTION RETERNS.

Anson-Spnate, Juseph Pirkett.
Communs, Clement Marshal, and John Smith
Ashe-Senate, A. B. M'Millian. Blevins.
Brunswick-Senate, B. R. Lurke.
Commons, Jacob Leonard and A fred More.

Bunconb-Senate, A. M'Dowell.
Commons, John Clayton and D.

## L. Swain.

Burke-Senate, Mathew Baird Commons, Edward Poor and David Newland.
Cabarrus-Senate. L. H. Alexander.
Commons, R. Pickens and John
Columbus-Senate, James Burney.
Con mons, Caleb Stephens and L.

## . Simmons.

Camden-Senate, Willi4 Wilson
Commons, Thomas Dozier and Simeon Jones.
Currituck-Senate. S. Salyear.
Commona, W. D. Barnard and Enoch Bail.

CTMumbanserstay. Wuliock.
$C$ mmons, doseph MK Kerremy Jackson.

Davidson-Senate, J. M Smith. C wann, I omas Idampton and ohn Ward.
Duplin-Senate, Stephen Miller. Commans, Win. K. Frederick and Bemamin Best.
Town of Edenton-James Iredell. Gutes-Senate, E. K. Hunter. Commons, W. W. Stedman and John Walton.

Hyde-Senate, Benj. Foreman. Commons, Cillman Farrow and Jum J Bunner.
Heartford-Senate, E. H. Sharp. Commans, B. I. Montgomery and Loma d Martio.
Jones-Senate, R. U'Daniel. Commons, E. Fioy and O'Bryan Cox.

Iredell-Senate, Samuel King. Commons. R Alliyon and Ale ander Torrence.
Lincoln-Senate, D. M. Furney.
C mmons, O. Holland and B. Ship...
Montgomery-Senate, E. Deberry Commons, John Dargan aud T. C. Dunn.

Martin-Senate, L. Cherry.
Commony, David Latham and J. Co per.

Pasquitank-Senate, T. Bell.
Cominons, Win. I. Hardy and T. Jordan:
J'itt-Senate, John Joyner.
Commons, M. Dickinson and W. Andrews.
Biwan-Senate, John Beard.
C inm ins, Jionn Clement and John Linn.
Town of Salisbury-C. Fisher.
Sampson-Senate. John Sellers.
Commons' David Underwood and Chimas Sutton.
 John saintclair.

## For the Patriat.

Mr. Editor-1 mist apolngiqe (or some grammatical er rore, which have orcur red in the "Citizens brief "pimarks on Capt. Symmes Theory." lu ine place the sense is entirely ob-4cured-..covered by the acceleration of falling bodies." It should have been " the law of gravitation 9 ascertained ty the acceleration of Palling borlics"-1 give up all the 0 . ther errors without correction, to thuse whi can best support their dig. nity by smiling at them-While hav. ing seen more of the Captains reasons for the vacuum at the centre : I will again briefly remark, that the centrifugal force at the eartl's centre terminates in nothing- $1 t$ is greatest at the surface of the earth where the motion is greatest. and as the squares of the distance terminates finally in nuthing: the slade of the sun dial is not descernable, for it revolves on it but once in 24 hours, and if any dislocation of particles is to be ac. rounted tor by the cenirifugal force. it would seem rather tor apply to those on the surface than those at the centre. - 19 to the neutrality and destruction of cohesion at the centre from subcumbent mater gives me no idea, for the attractive matter tends to that point from every point on the surface; but as this effluvia or aura of gravitation is constantly tending to the centre, it appears natural to conjecture, that some modifiration should be made on it by comdensation, to make space for the aura ef gravitation, which must be constantly returning to the centre. We have an example in the solar focus formed by the burning elass, also, in the electric jar, when highly condensed it issues forth in the form of light from the jar ; also the sun himself, white he is continually receiving the returging aura of gravitation, he is forever emitting his light. The at mosphere being accumulated at the poles, the poles will be centres of arrial gravitation; and the aura of arrial graviation ; and be there accu.
mulated to such a degree as to senc Torth the Aurora Burealis, and from the artic circles, the climate towar the poles (where the expansion of (his aura of gravitation has taken place) may be more temperate. But to sup pose the Eiarth perforated by a hollow of 5000 miley, we must suippose that the returning aura of gratitation trom the cavity of the Earth, would create a vacuum of that aura in the centre of this cavity; this might ac count for the stream of this aura to the north pole; but if this was the construction of the eat th in fact, we qhould look fir another and another cavily in the different comical shefl. of the earth; but ther ${ }^{\text {is }}$ is no necessi iy of recurring to this cavity to account for the constant currant of at tray ve aura to the poles; and i this wis the case we could not account for that power which holds all the plannets with their poles pointing for a partirular point in the heavens. This enquiry is extensive, and its investigation leads us deep into the hidden arcana of nature, the best theory is that which is universally applicable to all motion and life.

A Citizen.
The last Dricn Gazette records the following sirgular cireumstance : A circumstance occurred in this city which, fur its singularity, may not be deemed unworthy of notice in the transaciions of the day-1 Gun which had been dubbed Thomas Jefferson, on the 4th uit. which was brsught out to perform the funera salute, in commemoration of the de parted Great. This sturdy " But Dog," as if proud of the honor con
 disgorged of 82 thundering lads. withut complaint: but the matich was no sooner applied for the 83d and last for the age of Mr Jeffersoti: Than he expired as a Gun! That tionte burst as if determined after pe:forming the last duty to the m cm ory of him, afier whomethe was named, to quit the world forever.
We are lappy to state that $n$ person was injured by the accident.
Horse racing appearg to be carried on in Russia upon an extensive scale-67 wersts ( 43 iniles) at a single heat.
The European papers mention race recently run on the banks of the Don, in which a horse belonging to Count Platoff perlormed that distance in two hours and five minutes -many fine horses that started in the race, died before they could reach the goal, or immediately after their perfr.mance-U S. Gaz.

The University of Virgunia has a present aboul 170 students within it walls. If the Law Lectures had commenced with the present session it is calculated that the number would have increased to at lea-t 200. There are students from all the states south of Delaware. Two from N. York. The Faculty are stricter than they were during last session ; and the students generally more orderly and studious. Why should there be a single exception to this general result ? Fortunati nimium si sua bona norint! 「he Architects are going on with the Anatomical Hali and the Rotunda. Of the later the Library and the Portico are rapidly advancing. The Italian Capitals to the columns of the Por ico are of the purest marble and of the most veat tiful workmanship. The Faculty have established a Dispensary to be attached to the Medical school ant to be attended three times in thi week by the Professor of Medicine and his students; when medieines will be distributud on the most libe ral terms, and the students will havr in oppormanity of seeing the attend ing patiento
nich Einq.
