REPEATED DOUBLES

WHEN YOU HAVE heard nothing but ordinary passes from your partner, your doubling at the first opportunity will be interpreted as a request for action from him. If the next player bids and your associate passes, your second double is a still more urgent request for action. Most good players treat repeated doubles as still informative up to the range of bids of three.

Hearts by West, North doubled again and East bid 2-Spades. South passed and West called 3-Hearts. North injected another double, over which East bid 3-Spades.

At the table where the contract was played there, the East player was able to make it. The lead by South was the heart 8, which was taken in dummy with the A and the diamond 5 discarded. Declarer lost two trumps and two clubs.

The South player at the other table came to life after his partner's third double and put in a 4-Diamond bid which the opponents did not dispute.

Tomorrow's Problem ♠ 3 10 7 3 ♥ Q J 10 8 ♦ A Q 6 3 ♣ Q J 10 8 ♠ A 7 6 4 2 ♥ 8 5 2 ♦ A K ♣ K 8 5 ♠ K 9 5 ♥ A K Q 6 4 ♦ 6 5 ♣ 9 7 2

(Dealer: East. Neither side vulnerable) What defense sets South's 4-Heart contract, the original lead being the spade Q?

Disorders of Spleen, Bone Marrow Bring on Anemia

By LOGAN CLENDENING, M. D.

WHEN WE consider the entire blood system, with the bone marrow as the place of origin of the blood cells and the spleen as the place of their destruction, it is easy to visualize the conception that the blood can be impoverished either by lowering the activity of the marrow or increasing the activity of the spleen.

In actual fact, both of these things occur and anemias of both types are known. The activity of the marrow is depressed by a number of things. Any infection will do it. It is well known that after even a sore throat or tonsillitis, there may be a weakness and pallor due to a mild anemia. As soon as the poison is eliminated, the marrow function is resumed again and the condition rapidly rights itself automatically.

We have gained great insight into the anemias from the work done by Whipple, Minot and Murphy, work which gained them the Nobel prize.

Described Anemia About a century ago an English physician, Thomas Addison, described a peculiar anemia that came on without apparent cause, and usually progressed fatally. It was called pernicious anemia. In the course of time it was found that in this disease the walls of the stomach are completely atrophied. Then

Whipple, Minot and Murphy, in 1925, showed that the stomach secretes a substance that stimulates the bone marrow to blood formation. So the stomach is also a part of the far-flung blood system.

This substance, known as the anti-anemic substance, is stored in the liver. Naturally, when the stomach is atrophied, the marrow ceases to work and anemia results. But the important findings of this work were that liver extract would entirely replace the missing substance and completely cure so-called pernicious anemia, which is now no longer pernicious. It is now called Addisonian anemia, after its discoverer.

Besides liver extract, iron will stimulate the bone marrow. And so will Vitamin B. A number of my readers write in to ask me where they can get Vitamin B. Ordinary yeast furnishes good quantities of it.

When the spleen becomes overactive and destroys too many red cells, an anemia known as splenic anemia results. It is treated by X-ray of the spleen.

EDITOR'S NOTE: Seven pamphlets by Dr. Clendinging can now be obtained by sending 10 cents in coin, for each, and a self-addressed envelope stamped with a three-cent stamp, to Dr. Logan Clendinging, in care of this paper. The pamphlets are: "Three Weeks' Radiation Diet," "Intoxication and Constipation," "Medicating and Gaining," "Infant Feeding," "Instructions for the Treatment of Diabetes," "Feminine Hygiene" and "The Care of the Hair and Skin."
