

Senior Vespers Largely Attended And Impressive

Rev. B. C. Keavis and R. C. Gary Are Speakers; Candlelight Number and Memorial Included; Band Plays Several Numbers.

Warns of Inflation

John Maynard Keynes

Prof. John Maynard Keynes, famed British economist, is pictured upon arrival in New York by clipper plane to confer with U. S. Treasury officials and the British Supply Council. To register, he issued a warning that inflation must be stopped in the United States, as, he said, it has been in England and Germany.

Several numbers were played by the band, including the "Annunciation March" as a prelude to the "Glorious" by Schubert. The band also accompanied the singing of "The Rose Tree" and "The Rose Tree" by the choir.

Reynolds Wins Vote

(Continued From Page One)

The steering committee's recommendations usually are followed, but the Senate must finally approve. The action of the steering committee, informed persons said, followed an earlier meeting of Democratic leaders in the Senate, at which it was decided it would be better not to wage a floor fight against selection of the North Carolinian.

acting as a definite check on the President against any move to order use of the Navy to convoy war shipments to belligerents. In a formal statement announcing

Hear Rays for Aches

New Way to Apply Infra-Red Vibrations

By LOGAN CLENDENING, M. D.

For spring muscle aches due to the sudden return of bodily activity, as well as many other conditions, heat by infra-red light rays is of great value. Of course, heat of any kind will help such muscular discomforts, fibrositis and stiff joints.

But when heat is applied to the human body, at any one area, the blood stream immediately does everything possible to distribute the heat to other parts of the body. Depth penetration to any one area is accomplished with the application of heat faster than the blood stream can carry the heat away. Infra-red rays penetrate the outer skins of the human body with little, if any, resistance. Reaching the flesh tissues, a resistance is set up, and while the penetration continues, the process of penetration is through conduction.

With ordinary heat applications such as warming pads, hot packs and the like, which are applied to the surface of the outer skin, it will be seen that the heat cannot carry the heat to other parts of the body quite rapidly and the good effects are often temporary. When there is pain connected with afflictions of the body and the affliction is one which requires medical treatment (I refer to rheumatism, arthritis, neuritis and the like), infra-red ray treatments will do much toward relieving the pain, as the effects are soothing and numbing to the nerve ends.

For painful congestions caused by spring chills, it will be found that these congestions can quickly be dissipated with the application of infra-red rays. The length of time for these infra-red ray applications depends on circumstances. About forty or fifty minutes is required for a deep congestion. Remember the blood stream will distribute the heat to other parts of the body, so the treatment should be repeated every few hours.

Injuries to the body such as pulled muscles, sprains, bruises and the like are all relieved by the application of infra-red rays. The length of time for these infra-red ray applications depends on circumstances. About forty or fifty minutes is required for a deep congestion. Remember the blood stream will distribute the heat to other parts of the body, so the treatment should be repeated every few hours.

EDITOR'S NOTE: Dr. Clending has been published in the "New York Times" and "The Washington Post" for his work on infra-red rays. He is a member of the American Medical Association and the American College of Surgeons.

Babson Sees Army Force As Potential Peace Force

(Continued From Page One)

The bigger an army is, the more dependent it is upon supplies; the bigger a navy is, the more dependent it is on bases; but the biggest an air force is, the less dependent it is on anything. Lindbergh talks of the 30,000 or more planes which Hitler has; but you note that Hitler does not do any bombing about these numbers. He realizes that the risk of detection increases as the number of his airplanes; yes—some mathematicians claim that they will increase as the square of the number of his airplanes.

How Long Will the War Last?

The military men with whom I talk appear to look forward to a long draw-out war, extending from five to ten years. The navy men, who are "ready to go," talk of a war of from three to five years. When, however, I talk with officers of the air force, I find that they look forward to a very much shorter war. They visualize the tremendous destruction possible to both sides with a constantly increasing force of bombers. One prominent officer of the United States Air Corps gave me the definite date of November, 1942, when the air force of both sides will say, "Let's quit. This routine destruction has gone on far enough. We owe something to our wives and children."

Be Prepared for Anything.

We hear much today about preparedness. I am for preparedness, but for preparedness in every sense of the word. We should prepare for war, but we should also prepare for peace. We should keep our feet on the ground, but we should also look up to the heavens. We should be realistic, but we should also be idealistic. What the real truth of the

an army because I believe that the war ultimately will do the whole world a lot of good. But we all have our strong points and our weak points. I confess that my weakness is the belief that the world always has been growing better and is growing better every day, even now. It is true that airplanes have developed into terrific weapons for destruction, but they will also serve as many-
