

# THE REST OF MY LIFE WITH YOU

by Faith Baldwin

### SYNOPSIS

Mary Norman, attractive widow, lived chiefly for her son, Dr. Matthew Norman. The income from her smart decorating shop had even been through college and would aid in establishing his practice. She was overjoyed when lovely Judith Lambert, daughter of an old friend now living in California, dropped in for a visit. Judith confessed Matthew used to be her secret love. "But he didn't know I existed." En route to Maine for the summer, Judith promised to stop off on her way home in the fall. As Mary awaited dinner with Lynn Mortimer, lawyer, she indulged in a little mental matchmaking about Judith and her son. For years Lynn has been in love with Mary, but his wife, a mental patient, was still living. Mary was stunned when a telegram from Matthew announced his marriage to Irene Murray, a nurse. She had met Irene but never suspected a romance. Early next morning Matthew phoned to ask if Irene might stay with Mary while he is on duty at the hospital. Mary found her daughter-in-law charming as the latter shyly explained their hasty marriage. "Matthew simply would not wait." She tells Mary she will continue at the hospital until Matthew opens his own office in the fall. Mary offers to help them and an agreement, although she had hoped they would live with her.

### CHAPTER SEVEN

Mary's brows were drawn. "I don't see why you wish to go on working."

"I want to help," explained Irene. "That's as much part of my job as anything else, don't you think? After Matthew leaves the hospital I thought it would be a good idea if I went on the regular. I can earn money that way. But he doesn't want me to, he would rather I helped him in the office."

Mary said, "So it's all decided between you?" She added before the other girl could speak, "I know about what a charge nurse is paid, and (you will forgive me when I say) it isn't worth your working all day and going home tired and worn out, when I can do so easily—"

Irene cut in hastily, "It isn't the money; I know how little that is. It wouldn't do more than pay the rent of a tiny place, perhaps not even that. But I— I'd like to be near him," she said, "I'd see him, every day, I'd be in touch—"

"I see," said Mary, "if you insist, I do understand." She rose and, as Irene came to her feet, she took her hands and pulled her close and kissed her. "You'll be a wonderful wife, Irene."

She followed her mother-in-law into Matthew's room. It was severe and masculine. It had twin beds, and a tall-boy and a dresser.

Mary explained, "We've lived here you know ever since Matthew was in medical school. He was al-

ways bringing some boy or other home with him, hence the amount of space. She added, "I'd planned to refurnish it in 1934."

Irene said shyly, "Would you help me with the apartment? I have a little money saved, but was used training. I thought I'd use that. I wish it was more, but I added, "but it wouldn't stretch to Matthew's office now."

"That's my problem," said Mary. "I'll look it over, but I don't know how you can help me. I'll have you and your son with you when you want to live."

"None the wiser," said Mary. "I'll look it over, but I don't know how you can help me. I'll have you and your son with you when you want to live."

"That's my problem," said Mary. "I'll look it over, but I don't know how you can help me. I'll have you and your son with you when you want to live."

"None the wiser," said Mary. "I'll look it over, but I don't know how you can help me. I'll have you and your son with you when you want to live."

"That's my problem," said Mary. "I'll look it over, but I don't know how you can help me. I'll have you and your son with you when you want to live."

"None the wiser," said Mary. "I'll look it over, but I don't know how you can help me. I'll have you and your son with you when you want to live."

"That's my problem," said Mary. "I'll look it over, but I don't know how you can help me. I'll have you and your son with you when you want to live."

"None the wiser," said Mary. "I'll look it over, but I don't know how you can help me. I'll have you and your son with you when you want to live."

"That's my problem," said Mary. "I'll look it over, but I don't know how you can help me. I'll have you and your son with you when you want to live."

"None the wiser," said Mary. "I'll look it over, but I don't know how you can help me. I'll have you and your son with you when you want to live."

"That's my problem," said Mary. "I'll look it over, but I don't know how you can help me. I'll have you and your son with you when you want to live."

"None the wiser," said Mary. "I'll look it over, but I don't know how you can help me. I'll have you and your son with you when you want to live."

"That's my problem," said Mary. "I'll look it over, but I don't know how you can help me. I'll have you and your son with you when you want to live."

"None the wiser," said Mary. "I'll look it over, but I don't know how you can help me. I'll have you and your son with you when you want to live."

"That's my problem," said Mary. "I'll look it over, but I don't know how you can help me. I'll have you and your son with you when you want to live."

"None the wiser," said Mary. "I'll look it over, but I don't know how you can help me. I'll have you and your son with you when you want to live."

"That's my problem," said Mary. "I'll look it over, but I don't know how you can help me. I'll have you and your son with you when you want to live."

"None the wiser," said Mary. "I'll look it over, but I don't know how you can help me. I'll have you and your son with you when you want to live."

"That's my problem," said Mary. "I'll look it over, but I don't know how you can help me. I'll have you and your son with you when you want to live."

# The Capillaries And What They Do

By LOGAN CLENDENING, M.D.

TO THE TRUTH that a man is as old as his arteries might be added the suggestion that a man is as happy as his capillaries. The capillaries, those smallest of the

Dr. Clendenning will answer questions of general interest only, and then only through his column.

blood vessels which carry the great sheet of blood around the surfaces of the body, are capable of contracting or dilating so that the sheet of blood is small and thin or large and thick.

These varying diameters respond to various factors—emotions and temperature to name two familiar ones. The emotion of embarrassment will result in dilation of the capillaries of the face which is blushing. Hot weather temperature will cause the capillaries of the skin all over the body to dilate, more blood is brought to the surface and exposed to cooling breezes and your bodily comfort in hot weather thus maintained.

Human beings vary a great deal in the amount of response on the part of these small blood vessels. One fellow in cold weather overcoats and has cold hands and feet. It is not too much to suppose that some have capillaries in the brain which do not expand under the influence of good company, a joke, or a good movie, they do not laugh so readily, so I am not exaggerating when I say that a man is as happy as his capillaries.

**Raynaud's Disease**  
Besides such purely functional changes due to the influences of weather and emotion and environment, there are conditions which go over this borderline and can be said to be diseases. Such as the people with what is known as Raynaud's disease, in which the fingers or toes turn white and bloodless and in some cases for so long a time that the skin becomes gangrenous and ulcerated. Such possibly are the people with migraine headaches. And such are the people who have persistently low blood pressure with no discernible cause that can be ascribed for it.

A test for vascular tone in a person susceptible to these conditions has been devised by Drs. Meyer and Naude of the University of Pennsylvania. It consists in determining the rate of fall of temperature in the extremities during the application of cold to the abdomen and the rate of rise of temperature on the application of heat.

It was found that normal persons varied enormously in their response. So much so that it is possible to grade individuals into seven groups running from very low to very high vascular tone.

**Blood Pressure Changes.**  
Of interest to most of us are the groups that have blood pressure changes. The doctors have nicknamed these patient groups. These are the "would-be top dogs" for the fellow who is inclined to have a little high blood pressure all the time. It is no accident that the doctor who specializes in the treatment of high blood pressure has a bunch of Federal judges and top flight executives and corporation lawyers as his clientele. Every once in a while one of these high vascular tone guys turns up with a couple of hundred thousand dollars in his pocket—so I don't see any real good reason for discovering a cure for the condition.

The low blood pressure group are nicknamed by the physicians "teachers," "nats," or "martyrs," or "muddlers." I didn't think up those names, so don't blame me. They would have a pretty good time if by some unlucky chance somebody didn't take their blood pressure and find it was low. They begin to worry about that which is the only thing they ever worried about in their lives. Otherwise you would find them on the waterfront a little quiet fishing. They do not run for elective office much.

The grand philosophical speculation along these lines would be to try to arrange all marriages so a hypertensive would marry a hypotensive. But Nature has other aims apparently and all too often you find two go-getters or two muddlers hitched together.

**QUESTIONS AND ANSWERS**  
R. D. T.: I have high blood pressure. Will eating eggs and salt cause this blood pressure to rise?  
Answer: Not in my opinion, although some doctors like to cut down salt and meats in the diet.

### THE OLD HOME TOWN

### Modern Equipment In State College Textile School

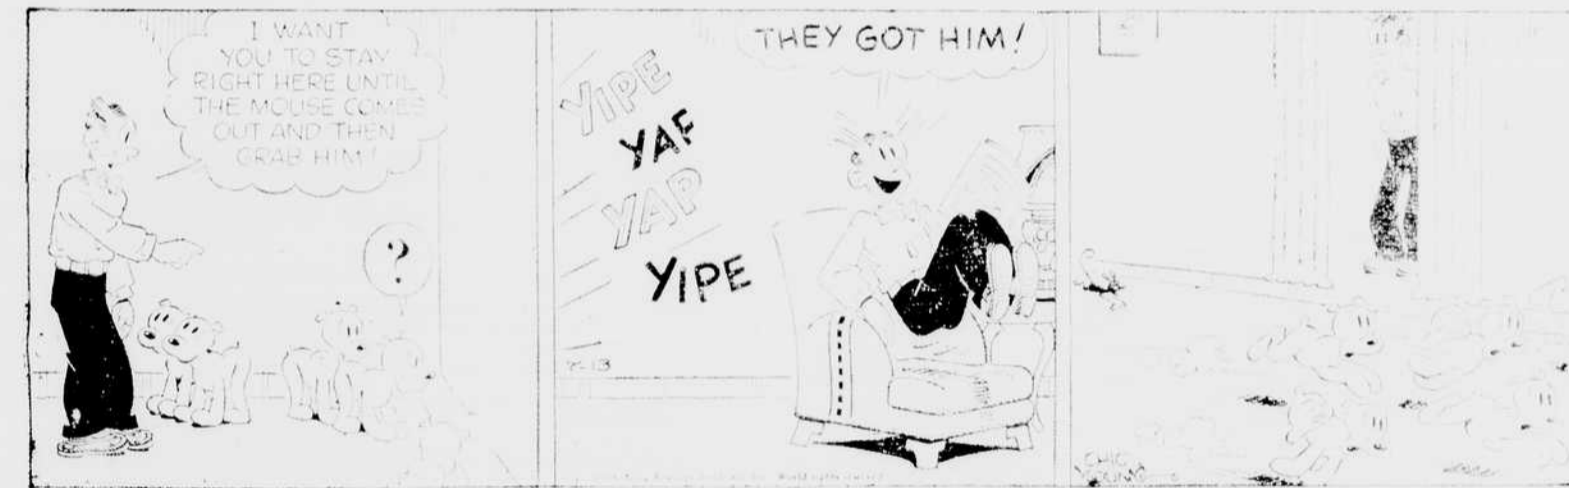

Raleigh, July 12.—Shown in the above photograph is a large slasher which is part of the mammoth collection of textile machinery in State College. Textile School, which is regarded as one of the foremost institutions of its kind in the world. Purpose of the slasher is to apply size compounds such as starches and gums to yarn to give added strength and better weaving qualities to the fabric. The machine, used in training textile students at State College, was built primarily for slashing rayon, but it is adaptable and is being used to slash cotton yarns. Shown above operating the slasher and demonstrating the latest techniques in the procedure are, left to right: Armand Pontas of New Bedford, Mass.; Arthur L. Fried of New York City; George H. Dunlap textile consultant and research expert at State College; and John M. Culp of Charlotte.
