The third new type of leaf and perhaps the most valuable of all is Oxford 26 which required more than 20 years to develop. It literally begins at Granville and is said to have cost \$32,000 to perfect. Before the introduction of Oxford 26 in 1944, Granville will look about 20 per cent of the tobacco crop in Granville, Durham and Wake counties, reducing the overall crop by at least 10,000,000 pounds each year.
