IDEA OF SCARCITY OF RUBBER IN GERMANY

This interesting French official photograph, which was taken at Oise, Quesmy, gives a very good idea of the scarcity of rubber in Germany. The bicycle wheel that the man in the picture is holding is a German wheel lacking rubber tires. In place of the rubber that is not put on, because of the rubber being so scarce, springs have been put on it instead.

Motor Accidents

A large per cent of auto accidents are really MOTOR accidents. Your motor is the heart of your car. When it goes bad there's something doing.

INSURE YOUR MOTOR

by bringing it to us for a thorough over-hauling. If it isn't too far gone we can put it in first-class condition.

We have facilities for repairing ANY part of ANY motor.

Bring it to us for SAFETY.

We are agents for the Maxwell car and will be pleased to show it to you; \$990 delivered.

Heath Motor Co.

WRIGLEYS

Is Sealed!

LOOK for the sealed package, but have an eye out also for the name WRIGLEYS

That name is your protection against inferior imitations. Just as the sealed package is protection against impurity.

The Greatest Name In Goody-Land —

SPARK PLUG TROUBLES

Two frequent causes of spark plug trouble are oil or particles of carbon collecting between the points and sooting of the porcelain. The first mentioned is remedied by carefully removing the oil or carbon and thus clearing the gap. If the carbon on the porcelain is hard, do not attempt to scrape it off. Soak the porcelain in kerosene or liquid carbon remover until the carbon is soft enough to wipe off cleanly with a cloth.

Points out of adjustment or burned away will also cause missing. The points should be adjusted to a gap of from one-thirty-second to one-sixty-fourth of an inch, depending upon the ignition system, carburetor adjustment and design of motor.

AUTO JACK WILL DO MANY THINGS

Four of Them of Different Sizes Will Save Car Owner Much Time and Temper.

WILL JACK CAR OUT OF MUD

Device is Indispensable During Spring Overhauling or When There Are Bent Parts to Body or Frame of Machine.

That little Jack stowed away under the seat of your car will do many helpful things, but three more of them, of different sizes, will save you much time and temper.

For instance, when you get hopelessly stuck in mud, sand, clay or even snow your Jack may be the means of getting your car out of its predicament and save you that six-mile walk to the nearest village to get a span of horses.

Every Jack should be fitted with a two-inch block of wood as broad and long as will conveniently fit into the car. If the Jack is so equipped, it will allow the car to be jacked up out of the mudhole, so that the rear wheels can have boards slipped beneath them for traction. If necessary, it is not a bad idea even to use the car cushion for traction; that is, if no planks are at hand and you are hard-pushed for

OIL FOR THROW-OUT COLLAR

There Are Several Self-Feeding Cups on Market Which May Be Used for This Purpose.

In certain cars it is necessary to remove the floor boards in order to lubricate the clutch throw-out collar. As a consequence many car owners neglect this important item of lubrication, until trouble in the units makes the need evident. In cases of this kind where no provision has been made for lubrication by having a grease cup that extends up through the floor boards it will be wise to install an oil line to feed this part. This can easily be done by arranging a large oil cup to feed through a small opening into a metal pipe running to the throw-out collar. It is necessary to have a small opening, so that the flow of oil will not be too rapid, for obvious reasons. There are several self-feeding oil cups on the market, which may be used to advantage in this connection.

MOST CONVENIENT TIRE TOOL

Little Wedge of Wood Can Be Slipped In Between Beads and Pulled Around Surface.

One of the most convenient little weapons for use in tire repairing is a little wedge of wood, three-quarters of an inch thick and three to five inches long, depending on the size of tires used. This wedge is slipped in between the beads and can be pulled around the entire circumference of the tire with one hand, while the other is free to hold the tire. This is much easier than trying to use both hands to force the casing open, while holding it on the shoulder.

DO NOT NEGLECT UNIVERSALS

Joints Wear Rapidly and Frequently Break if Grease Is Lacking—Look After Them.

A dry universal wears rapidly and frequently seizes and breaks if it lacks grease. Do not neglect, therefore, the lubrication of your universal joints. True, it is usually a lot of trouble to grease them. They are under the car and just when you feel like doing the job no grease gun is handy. However, to neglect them is to court disaster. They should be lubricated about once a month.

GOOD ADJUSTMENT OF BRAKES

If Too Tight, Friction Results and Unit Becomes Hot—Good Plan to Feel Brake Drum.

Heat is the inevitable concomitant of friction. When the brakes have been too tightly adjusted, friction results and the unit becomes hot. It is a good plan to feel the brake drum after an adjustment has been made and the car run awhile, for if the parts are too tight, the heat present in the drum will indicate the trouble.

Do Not Neglect to Increase Your Jack Family by at Least One or Two Before Taking a Tour.

the necessary material. In fact, anything that will enable your car to get on solid ground is cheaper than waiting all night for assistance.

One of the cleverest uses for the Jack was seen recently, when a wounded soldier drove into town in a heavy car that had a broken spring. As he had a crippled leg, he was not strong enough to lift the body of the car to place a bumper or log between the axle and the frame. But he had wisely provided himself with a small low Jack, which conveniently fitted into the space between the axle and the body.

The Jack is indispensable during the spring overhauling or when there are bent parts to the body or frame. For example, bent body parts may be straightened by giving the Jack a leverage against the garage wall.

Jacks have long been used in garages that are not equipped with huge machinery for straightening bent frames and even front axles. In addition to this, when straightening a bent frame with a Jack the chassis does not need to be dismantled, as it would if heat were applied.—G. F. Collins in Popular Science Monthly.

LOOSEN INACCESSIBLE NUTS

Best Plan is to Use Socket Wrench of Proper Size With Big Wrench for Leverage.

The best way of loosening large and inaccessible nuts, which are sometimes found about the chassis, is to use a socket wrench of the proper size, with a big wrench to furnish the leverage. This combination will handle almost anything.

A SAFE GUARD

This is a world of chance, and the prudent man will make use of every means of SAFETY.

That piece of property, for which you have toiled and sacrificed, is not safe. Fire may consume it; wind may wreck it.

INSURANCE WILL SAFEGUARD IT.

Your health may be perfect today. But have you any assurance it will be the same tomorrow, or next week, or next year?

INSURANCE WILL SAFEGUARD IT.

That is, while it will not prevent your becoming sick, it will prevent FINANCIAL LOSS through sickness.

Come to us for any kind of an insurance policy you may need—Fire, Life, Tornado, Accident, Flood. Safe companies and attractive policies.

FURNITURE THAT WILL

OUTLIVE YOU

FURNITURE — FURNITURE — FURNITURE

Not the cheapest, but as good as the best. We do not desire to be known as the cheapest store on earth. Our goods are what we claim them to be—worth the price—and our prices are extremely moderate when quality is considered. You can get goods cheaper than we care to sell, for we do not care to handle the ordinary cheap glue pot variety of furniture; but no reliable store in any other city can offer you better values than we do, and our service is good—ask your next door neighbor about it, and about us. Come and see us. Remember it is our business to please you.
