COME BACK, YE STRAGGLERS FROM AFAR, AND BEHOLD HOW THE HAUNTS OF OLD BOTH BLOSSOM FORTH IN A NEW WAY

Next week will be "Homecoming Week," as well as Fair Week. It will be remembered that several weeks ago Secretary J. H. Canady issued a public invitation to those "afar off" to return home for the occasion. It will be an auspicious occasion for coming home.

Former Kinstonians will be here, too, in large numbers. Those who have remained away a few years will hardly know the town. It is truly Greater Kinston, and Growing Kinston. Simple figures, speaking more eloquently than words, prove Kinston's deeds:

The population, for instance, has increased practically 40 per cent. in five years. In 1910 it was around 6,900; now it is, by actual count, practically 10,000!

The postoffice receipts are far larger than they were five years ago. The grain the last September over September of 1914 was \$311.18, although, to be perfectly fair about it, the average increase isn't quite so remarkably good.

There are now six banks in Lenoir county. They have over \$450,000 capital, and more than a million and a quarter dollars on deposit!

Kinston's lumber mills pay a quarter of a million dollars in wages per annum. Their output is valued at from \$550,000 to \$600,000.

The output of textiles from local mills is valued at over a million and a quarter dollars a year. They pay more than \$150,000 in wages.

Kinston will this year sell around 20,000,000 pounds of tobacco.

Four carriage factories now operating here have an output worth a quarter million dollars.

There are eight or nine jobbing houses. They do almost a million dollar business.

If 8,000 bales of cotton are sold in Kinston this year, as is expected, the sales will aggregate, at say, \$55 a bale, \$440,000.

Corn is being shipped from Lenoir county! Former residents will be interested in this fact. Over 300,000 worth of local corn has been shipped out this year.

All kinds of crops suited to local production are being grown. Cotton and tobacco now have a lot of small brothers in the section.

Kinston's business amounts to over \$6,000,000 a year in the annual output of its factories, income from the bigger crops and the jobbing trade.

Three-quarters of a million dollars goes into payrolls.

Great is Kinston!

DESTROY THE CORN WEEVIL BY USE OF CARBON BISULPHIDE

Resident Farm Demonstrator O. F. McCrory today issued the following information for farmers:

"Carbon bisulphide, sometimes called 'biga life,' is a colorless liquid having a strong, disagreeable odor. It vaporizes rapidly at ordinary temperatures, is highly inflammable, and when ignited is explosive. Caution! Keep away fire of any kind, whether flame, stove, lantern, embers, lighted pipe, cigar, cigarette or any other means for conveying fire of any kind. It may be purchased at any drug store or chemical wholesaler at about 25 cents in pound lots, while in larger quantities the price is less. This liquid and the vapor coming from it is heavier than air and will sink. Therefore, the application is made at the top of the corn and not from below.

"It is used for fumigating grain and seeds to kill weevils, rats and also mice. It is also used to kill ants on lawns and insects feeding on the roots of plants. May also be used for treating soil that is infested with bacterial diseases.

"Where only a small quantity is to be fumigated, such as seed corn, it may be accomplished by pouring it in a barrel. A kerosene barrel is about the right size. Each barrel will hold about three bushels of corn. Three ounces of carbon bisulphide is poured over the surface and the barrel then tightly closed for about twenty-four hours.

"For grain or corn in tight bins and cribs: Use at the rate of one pound to 100 barrels, or 1,000 cubic feet of space. The corn should be of uniform depth before the treatment is made. The Carbon Bisulphide may then be distributed over the surface in shallow pans or it may be sprinkled directly on the grain. There is no danger in using corn thus treated.

"In open cribs the dose should be increased to three pounds to every 100 bushels or 1,000 cubic feet of space.

"Be extremely careful to keep fire away while using it, as it vaporizes as gasoline does and is extremely explosive.

"Additional information will be furnished by the county agent."

Barrowers--Howard!

Gophers and pocket mice are the bane of western farmers. Each year the east would be invaded by the type of barrowing in fields. One of the latest of the soil to be a pest of these things is the double kill. It is very deadly.

Don Leonardo, a California rancher, says: "I have found the proper medicine to give against gophers, pocket mice, etc."

Take an inch and a half or two inches of dynamite. Put it in a cloth or several pieces of paper to form a ball and roll it. Tie the cloth or paper around one end of a piece of pipe twelve or fourteen feet long, and then use it.

Insert one of these charges well into the mouth of every hole and pack loose dirt around the base, leaving enough of the end outside to light easily. Light the fuse and go on to the next hole. There will be an explosion.

These being to run or other detonator, the dynamite will simply burn, filling the hole with dense, poisonous fumes that will almost instantly stifle and then kill every living thing inside.

their flow. Numerous irregularities cause them to meander about in apparently wasteful ways; and man's carelessness has added to these troubles by allowing driftwood and loose earth to form dams and sandbars.

All of these things help to hold the flood of waters back and cause either flooding or swamps, which not only occupy land that could be more profitably used for farming, but also form fine breeding places for mosquitoes and other obnoxious pests. Incidentally, they cause an annual loss running into millions of dollars per year.

In this day of enlightenment such things are both wasteful and, one might add, criminal, especially so in view of the fact that almost instant relief may be had by a few well placed charges of dynamite. Not only will these blasts straighten out the kinks and bends and remove ledges and sand bars, but they will deepen and improve the channels as nature has really intended. Incidentally by straightening the winding course of a creek much area of tillable land can be obtained and farm operation in many instances made much easier.

HUSBAND RESCUED DESPAIRING WIFE

After Four Years of Discouraging Conditions, Mrs. Bullock Gave Up in Despair. Husband Came to Rescue.

Catron, Ky.—In an interesting letter from this place, Mrs. Bettie Bullock writes as follows: "I suffered for four years, with womanly troubles, and during this time, I could only sit up for a little while, and could not walk anywhere at all. At times, I would have severe pains in my left side.

The doctor was called in, and his treatment relieved me for a while, but I was soon confined to my bed again. After that, nothing seemed to do me any good.

I had gotten so weak I could not stand, and I gave up in despair.

At last, my husband got me a bottle of Cardui, the woman's tonic, and I commenced taking it. From the very first dose, I could tell it was helping me. I can now walk two miles without its tiring me, and am doing all my work."

If you are all run down from womanly troubles, don't give up in despair. Try Cardui, the woman's tonic. It has helped more than a million women, in its 30 years of continuous success, and should surely help you, too. Your druggist has sold Cardui for years. He knows what it will do. Ask him. He will recommend it. Begin taking Cardui today.
