# A Great Throng Hears President Clevelan and Other Distinguished Visitors Speak.

FREDERICRSDUBG, V4. - The monit-licent to the mother of Washington, unveiled in the presence of the great multitude, is an obelisk of white marble, fifty feet. Its base consists of three courses, the upper ane bevelled and surmounted by a die bearing 12" simple inscription: "Mary, the Mother of Washington." A cap surmounts the die, and from this rises the beautiful white shaft. The site is at the tdge of a heantiful platents and near ie two grav boulders ilpoit which the patriot's mother was accustomed to sit r hours daily with her knitting.

The evereises at the monument were of a most interesting character. They were opened with prayer by Rev. James P. Smith, who largely inspired the movement that resulted in the erection of the monument. He was an aid to Stonewall Jackson and helped carry him off the field when mortally wound ed at Chancellorsville, Mayor Rowe then extended a brief and appropriate welcome on the part of the city, after which Governor O'Ferall delivered a 15 minutes address of welcome on be half of the State, concluding his elo quent peroration by introducing Pres-ident Cleveland; who spoke about half an hour in a beautiful and patriotic address.

Then followed the cabalistic rights of Masonry accepting the work of the architect and moulders worthily done. Mr. Lawrence Washington was next introduced and delivered a short but interesting address. He is the son of John Augustine Washington who sold Mount Vernon to its present owners the Ladies' Association.

Senator Jno. W. Daniel was the ortor of the day and dwelt upon the his-

toric features. President Cleveland then held reception, after which Vice President Stevenson was introduced as a Master Mason to respond to the second tonst, which was to "George Washington," a faster Workman

Catton Ties Manufactured by a New Mine. A Chattanooga (Tenn ) company has ust completed and had patented a continuous automatic roll train for onverting steel-billets into rods and oops, and it is claimed will revolutionize that portion of the steel manufacturing business.

The billet of steel, when once placed n the rolls, without being again handled can be brought out in any dimension or shape wanted. It is claimed it will save fully \$1.50 on every ton of steel handled. The patent roller was built by Stanley O. Haskins, a son of the patentee and builder of the first continuous rolls ever made, and which are now used in nearly every large steel mill in the United States.

A company has been formed in Chattanooga to put the patent into immediate use, and is now putting three of the rolls in place, and will within the next 39 days begin the manufacture of otton ties on a large scale. With the ew machine the billet of steel is put into the rolls, and when next seen is a otton tie ready for bundling and shipping. This machine will reduce the cost of manufacturing cotton ties by

about \$2 per ton. The Chattanooga Industrial Co. is the name of the enterprise, and they will establish their cotton-tie mill, production to commence within thirty days, Buildings have already been leased, and the machinery will include an automatic roll train for iron in-vented by Mr. Haskins.

## TAR HEELS AROUSED.

Industrial Progress of the Old North State. (Churies Halloch in the Philadelphia Times and Churiest, in News and Courier.]

Ten Seats ago the people of one section of North Carolina hardly knew what sucher section of the State pro-duced. People one, le didn't know, dneed. People ones to domain, for North Carolina is a gree, domain, half the length of Texas, with a larg-part mountainons and but little traversed by sailroads until recently. The inhabitants from way buch were always quiet, contented and unob-irusiter and careless withal about bus-iness parsuits, and the early school geographics summed it up 28 me-half wilderness, given to naval stores, and the other half water and sand banet teaming with fish. So that for mails graph the maily generations travellers passing east and weet movely shirted the heads of the sounds on the south of flanked the postern of the Commitmwealth away up north in the Ohio River busin. Whenever the Tar Heel State was mentioned the thought was of bears or segregated game preserve like the Yel-lowstone National Park.

But that was "lang syne," as a Scotchman would say, and many of the early settlers of North Carelina were Scotch Latterly the State has gotten a move on herself, whereby railroads now at last penetrate all but seven of its mucty-six counties. Wher-ever there is a bed of ore, or a stone quarry, or deposits of coal, trainways are sure to be found. Manufactorics liave spring up all over. No less than one hundred and sixty six cotton mills and one million spindles are in a stendy whirl, and five hundred and fifty miscellaneous factories supplement the clatter and hum. Only until her State exhibit was set up at New Orleans, ten years ago, and followed by fairs at Atlanta, Boston, Chicago and elsewhere, did the industrial world suspect that North Carolina was capable of anything but tar and iish. Progress has gone on so quictly and estentationsly since then that the whole country is amazed at the development. So insidiously did the spirit of industry invert the cleepy old turpentine orchards and mountain rifts that the ancient community got awake and astir before its advanced neighbors realized that there was any excitement afeot. And now, in the lat ter day, there is no place between the two oceans equal to the "Old North Carolina" for investment. Gould, Corbin and Vanderbiit found it out soon and have promptly led the van of an immigration from Northern and Western States which is growing apace. Hundreds of small capitalists and

men of limited means are moving fron. the North and West to occupy where opportunities best offer, not only in the mountain and Piedmont regions, but along the neglected and sleepy seaboard. They are bringing in n industries and revolutionizing old ones. Under a new system of agricul-ture they have lifted the farmers burden of debt by causing an acre of land to produce the amount of three. Three crops a year are now raised instead of one as hitherto, and the profit of each is enlarged. In the Newbern district alone the value of the trucking interests has reached three and three-quarter millions a year and is one-uinth of the total for the whole United States. Gold is being mined at a profit in thirty-one counties. Seven-eights of all the mica used in the United States are claimed to be produced within its limits. Its fisheries lead all others. Its whale fisheries engage the labors of a dozen vessels from New Bedford and Provincetown during the summer. ovsters receive the attention of eight packing establishments. Its lumber ontput is one hundred millions of feel per annum. It has more popular seaside and mountain resorts than any other individual State, and a greater

variety of gems and precious stones. Topographically North Carolina is like Old Mexico, with its three grand climatic divisions, only that the peaks of the mountain region are rounded and not so high by half, the loftiest lowest rates write to wine less th

et. And w find in both countries the same com prehensive plant life and exuberan flora. Botanists aver that there are

dairy and extile interests Experiments already made at Newbern, Elizabeth City and other points prove what the botanists have all along declared that pasture and meadow grasses grow as luxuriantly as other plant growths, and that all that farmers need to make their own good beet, hay, cheese, but-ter and milk is to adopt those courses which common practice clsewhere de clares are proper and right. Experiments in hay culture and beef and milk production are already well advanced, and the State agricultural experiment farm has listed twenty-six kinds of grass and clover, which it cases. The mill will be ready to begin advises to use for hay or pasturage. The upshot of all this is to demon

no beggars, tramps or toughs. Farm schools for whites and blacks, if established in available districts, would It is claimed that the directors of disseminate much needed information in respect to many lines of industry ed with the prospect that they have in contemplation the possible erection of which have been neglected to over looked since the war. Vine cultur would prove a most profitable business if conducted on intelligent methods.

#### HAIL AROUND GREENVILLE. Ferried Jeff Davis Across the Yadkin.

Cattle Are Injured and Crops Are Bad Camaged.

GREENVILLE, S. C .- This section h been visited by severe thunder storm accompanied with hail, doing seriou injury in many localities. At Saul Flat, fifteen miles above this city. o Saturday, the storm was very sever covering a section of six miles long an hals a mile wide. Hail stones as lar as hen eggs fell and so great was th fall that in some places the stonbanked up two feet deep. Cattle wer badly bruised and injured. Boo were broken in and cotton plants were completely destroyed. At Pelzer, twelve miles below Green

ville, two honses were struck by light ning and the inmates were badly shocked.

The rain was heavy in this city, with thieves are said to exist in the United considerable hail.
