# CALOMEL IS MERCURY! IT SICKENS! ACTS ON LIVER LIKE DYNAMITE

#### "Dodson's Liver Tone" Starts Your Liver Better Than Calomel and Doesn't Salivate or Make You Sick,

Listen to me! Take no more sick-ening, salivating calomel when bilious or constipated. Don't lose a day's work! Calomel is mercury or quicksilver which causes necrosis of the bones. Calomel, when it comes into contact with sour bile crashes into it, breaking it up. This is when you feel that awful nausea and cramping. If you are slug-gish and "all knocked out," if your liver is torpid and bowels constipated or you have headache, dizzinens, coated tongue, if breath is bad or stomach sour just take a spoonful of harmless Dod-son's Liver Tone on my guarantee.

NEW PERFECTION

### **"THE** BEST WAY TO COOK"

"Is the New Perfection way. It's a cool way, a clean way! It costs less than any other and cooks better.'

The New Perfection Oil Cook Stove frees you from working over hot coal and wood ranges. It means gas stove comfort with kerosene oil. Saves time, strength and money.

The long blue chimney gives a perfect draft and the proper heat distribution. It assures a clean, even flame and lasting satisfaction.

Fuel cost—only 2 cents a meal for 6 people. More than 2,000,000 users prove the popularity of the New Perfection.

New Perfections are made in many styles and sizes.

Consult your dealer who can supply you with the size best suited to your needs.

Has Not Driven Mad So Many Soldiers as Was Expected.

WAR AND INSANITY

FIRST REPORTS EXAGGERATED

Dr. Dumas, Who Has Treated All Cases of Mental Trouble In One of French Armies, Describes Queer IIlusions of Demented-Cases of General Paralysis Few.

Paris .- The war has not driven mad o many persons as was expected in the early stages. Statistics thus far show that the first reports of men going crazy under the infernal fire of modern artillery were exaggerated.

A report made by Dr. Dumas, who has treated all the cases of mental trouble in one of the French armies, covers 1,188 cases of derangement, of which only 3½ per cent were cases of general paralysis, while in most asylums in time of peace the proportion is 15 per cent. This he takes as conclusive evidence that the fatigues and commotions of war have no influence upon the development of this form of insanity. General paralytics, however, when they become delirious. rave about the war, the same as cases in which the symptoms are quite different, and Dr. Dumas concludes that the life of the combatant often simply gives a war color to delirium that would have existed under normal cir-

umstances, but in a different form. Horror inspired by battle scenes sometimes works directly on the nervous system, developing symptoms such as hysteria, speechlessness, deafness, loss of the sense of feeling, fits of mental confusion or paralysis, not always accompanied by hallucinations or delirium. Optimism of the most exagger-ated type is the dominating note in the hallucinations of the paralytics, and Dr. Dumas considers it a wonder that officers do not in fits of exaltation give absurd heroic orders that lead to disas-In one case a lieutenant who declared to the doctor that he had "clean-ed out a German trench with two machine guns that he had carried on his back from a point several miles in the rear" had remained in command of his section until forty-eight hours before he was examined. A few days later a captain was brought to Dr. Dumas fresh from the command of his company suffering from an equally radical fit of "exaggerated optimism."

A considerable number of the mentally debilitated have the mania of inrention. Dr. Dumas is of the opinion that the number of these cases outside the army would be found greater in proportion if the minister of munitions could make public the correspondence he receives from civilians. Among the debilitated were several men and offi-cers who didn't know where and for whom they had been fighting. One de-clared that he was unaware that France was at war.

#### **NEWSBOY RETURNS A JUDGE.**

Once Poor Boy Goes Back to Newark as Distinguished Guest.

Newark .- Eighteen years ago Samuel H. Silbert, fifteen years old and until then a newsboy, left Newark, where he was born, with his widowed and ailing mother, a younger brother and two younger sisters for Denver, friends

having in part paid for the long trip. Recently Judge Samuel H. Silbert of the municipal court of Cleveland, O., was the chief guest at a dinner at the Frogress club in Newark given by for-mer and present day newsboys of the city.

CUTTING CORN FOR SILAGE.

Proper Time Is When the Ears Are In the "Glazed Stage."

The New Jersey station draws attention to a tendency among some of the best dairymen, who realize the value of corn silage as a feed, to put their corn into the silo at such an early stage of growth that it is practically impossible to make a first class grade of silage, even though it is stored in a perfect silo. Silage cut at the right time and kept in a good silo is one of the most economical and palatable feeds which can be fed to the dairy It is economical because a large amount of food nutrients can be raised to the acre in the corn crop, and these nutrients can be handled and stored in a most economical and convenient way when the corn is cut and put in the silo

Another point which is of considera-ble value is the action which the corn undergoes when placed in the silo. This is a fermenting process during which the sugar in the corn is changed to several acids. This softens the fibers, makes the protein more digestile and adds desirable flavors.

The proper time for cutting corn is when the majority of the ears are in the "glazed stage." If cut for silage at an earlier period it contains such a

CUTTING CORN FOR SILAGE

high percentage of sugar that the re sult will be silage containing such a large amount of acid that it will be unpalatable. It is much better to make the mistake of cutting too late rather than too early, as the only objection to late cutting is the loss of moisture, with the result that the stalks contain too much air and are liable to mold. This may be remedied by the addition of water while the silo is being filled.

Corn when cut during the "silk stage" contains practically half the amount of dry matter and food nutrients as corn that is cut for the silo from seven to fourteen days after the kernels have begun to glaze. This em-phasizes the importance of allowing the ears to get well glazed before the corn is cut for silage.

Stacking Clover. Clover left in the windrow overnight

#### GROCER GAINED SIXTEEN POUNDS THROUGH TANLAC W. C. Turner Says It is the Great-

est Health Restorer. And He Knows.

"I have gained 16 pounds of good solid flesh on two bottles of Tanlac, the greatest health restorer the world has produced and I'm back for more of it," declared W. C. Turner, prominent grocer of Raleigh, to the Tanlac Man.

"Yes, sir," he continued, "Tanlac brought me out from a general run-down condition when all other medicines failed and it has won for itself a place in my home. Why, I don't know what nervousness is now; I have a hearty appetite; I am free from all pains; I enjoy unbroken sleep; I have gained in strength and feel an entirely different man. Before taking Tanlac I had fallen off 30 pounds and didn't know what a well day was for months. I'm glad of the chance to praise Tanlac for I know it will help others who give it a trial."

Tanlac is sold in Marion exclusively by J. W. Streetman.
