This Overland is the world's most powerful low-priced car.

It has a 31 1/2 horsepower en bloc motor that is a perfect marvel for speed, power and endurance.

By increasing the bore of the motor from 3 1/8 to 3 3/8" we are able to offer a power plant which at 1950 R. P. M. develops full 31 1/2 horsepower.

Tests under every condition in all parts of the country dem-

onstrate that it easily develops better than fifty miles per hour on the road.

Speed of course varies under different conditions, but in practically every instance it has been getting fifty miles an hour and with ease.

We have scores of telegrams showing that twenty to twenty-five miles per gallon of gasoline is not unusual.

The performance of this car is almost beyond belief.

Take any other low-priced car on the market. Pit it against this new Overland. Compare them for sheer speed, for abundance of power, for riding comfort and economy, and you'll find this car will back anything else clean off the boards.

That's a strong statement, but a fact nevertheless.

Try it yourself and see. Here are more important facts.

It has four-inch tires which are more than generous for a car of this size.

Not only has it a large and roomy body, but it has an attractive, up-to-date streamline body.

It has the latest and most improved system of ignition.

It has the cantilever springs—the easiest riding springs in the world.

What's more, it's complete. Not a thing to buy. You get the finest Auto-Lite electric starting and lighting system, magnetic speedometer, one-man top, demountable rims and practically every accessory found on the highest priced cars.

It only goes to prove how big production can cut cost and save you money.

First come, first served. Place your order now.

+ PROFIT IN ORCHARD RENOVATION. +  
+ A county agent in Massachusetts began in 1914 a demonstration in the renovation of some old apple orchards. The following year from a two acre orchard heavily infested with San Jose scale, when the demonstration was begun, a net profit of \$210.77 was realized after paying for spray materials, man and horse labor, 5 per cent interest on the land, trees and working capital, taxes and all other expenses incident to the proper management of the orchard. +  
+ The net cost of developing young orchards in the same county has been reduced greatly by growing cash crops among the trees, as suggested by the county agent. In the case of an eight acre young orchard the crop so grown in 1916 met all the costs of the year properly chargeable, besides paying for some permanent improvements, and lacked only \$10.88 of paying for the trees, planting, etc. +
