HOW THIN PEOPLE MAY BECOME FAT

Excessive thinness, besides being unsightly, is a danger sign. Either you are not eating enough food, or the food you eat is not digesting normally and being turned into flesh. In either case something is wrong. If you do not eat enough, your appetite is not what it should be. If your food is not digesting properly, it is decaying and poisoning you while robbing your system of strength-renewing material.
IROGEN prescription, written by a famous physician for his own patients, is without equal in mauling needed weight and strength.
