### NOTICE

NOTICE IS HEREBY GIVEN that the following order relating to the issuance of \$80,000 for the purpose of erecting additions to schoolhouses in McDowell County was adopted by the Board of County Commissioners of McDowell County in regular session on May 2, 1949:

Ordered that bonds of the county shall be issued to the maximum aggregate principal amount of \$80,000 for the purpose of erecting additions to schoolhouses necessary for maintaining the six months' term required by the Constitution. A tax sufficient to pay the principal and interest of the bonds when due shall be annually levied and collected. A statement of the county debt for school purposes has been filed with the clerk and is open to public inspection. This order shall take effect thirty days after the first publication thereof after final passage, unless in the meantime a petition for its submission to the voters is filed under The County Finance Act, and in such event it shall take effect when approved by the voters of the county at an election as provided in the said Act.

The following resolution was unanimously passed:

RESOLVED, that the county accountant is hereby designated as the officer to file with the clerk the statement of debt required to be filed in connection with the bond order this day introduced relating to not exceeding \$80,000 bonds for erecting additions to schoolhouses. The time and day for a public hearing upon the said bond order is hereby fixed as 10 o'clock A. M. on the 17th day of May, 1949.

The foregoing order has been introduced and a sworn statement has been filed under the county finance act showing the assessed valuation of the county to be \$21,894,883.00, and the net debt for school purposes, including the proposed bonds, to be \$189,327.18. A tax will be levied for the payment of the proposed bonds and interest, if the same shall be issued. Any citizen or taxpayer may protest against the issuance of such bonds at a meeting of the Board of County Commissioners to be held at 10 o'clock A. M. May 17, 1949, or an adjournment thereof.

**RUTH I. LACKEY,**  
Register of Deeds for  
McDowell County and  
Ex-Officio Clerk to the  
Board of County Commissioners.

This the 14th day of April, 1949.  
**MRS. ELLA WESTERMANN**  
Executrix  
c-o Dula Hawkins  
Marion, N. C.

### Answers Given To Farm Questions

**QUESTION:** Why should a farmer pay \$10 or more per bushel for hybrid corn seed when he can get other kinds of corn seed for much less?

**ANSWER:** A little figuring will show that extra money spent for hybrid seed is one of the best investments which a farmer can make. A bushel of corn will plant about eight acres. At a price of \$10.50 per bushel, seed for one acre would cost approximately \$1.30. So just one extra bushel of corn grown on that acre will pay for the seed cost. Hybrids generally yield about 20 to 29 per cent more than the best sources of open-pollinated corn. A field which normally produced about 50 bushels of open-pollinated corn yield about 60 bushels when planted to a hybrid. The extra 10 bushels should convince even the most skeptical that buying good seed is an investment which pays well at harvest time.

In terms of results, it is the open-pollinated corn rather than hybrid seed which is expensive to buy.

**QUESTION:** Should DDT be used on dairy cows for insect control?

**ANSWER:** No, says the U. S. Department of Agriculture. Studies over a period of several years show that the application of DDT directly to milk cows for controlling insects results in the presence of small quantities of the insecticide in milk. Even small amounts of DDT in a food of this type might prove harmful in time, particularly for infants and small children.

It is remembered that methoxychlor, another effective insecticide, be substituted for DDT in controlling insect pests on dairy cows. Farmers also are urged to make every effort to reduce fly breeding sources by proper clean up and sanitary measures. In addition, it is suggested that residual sprays be used in and around other buildings where dairy animals are not housed, and on fences and other places where flies congregate.

### THERE'S A DIFFERENCE!

When Mrs. Taylor emerged from her house and started down the street, she seemed to be in a great hurry.

"Going shopping?" her nextdoor neighbor called out.

"No, no," she called back over her shoulder, "I haven't the time. I'm just going to get some things I need."

The number of milk cows on United States farms dropped 2 per cent in 1948, leaving 12 per cent less than when the decline began in mid-1944.

### Perennial Flowers from Seed, Easy as Vegetables

To grow perennial flowers from seed, it is far better to sow them in the early spring than to wait for summer. There is no way in which an amateur can save money faster than by growing his own plants of those perennials which "come true" from seed.

Peonies, iris, and some others take several years to reach flowering size, and then cannot be depended to resemble the varieties from which seed were saved. But columbines, delphinium, coreopsis, hardy pinks, shasta daisies, hollyhocks, pyrethrum, poppies, and many other lovely kinds of the highest quality can be grown to full maturity in one year.

Many of them, sown early this spring, will give their first blossoms before the season ends; and for years to come will be beautiful performers in your garden pageant. Amateurs who have found difficulty growing summer-sown perennials are usually surprised at the difference, when seed is sown in the spring. The usual practice is to sow the seed in boxes, or in a seed bed; then to transplant to garden rows as soon as the seedling plants are large enough to handle. Give them space in the row to grow until fall when they will usually be ready to take their place in the decorative border.

If you have vegetable plot, perennials can be grown there and given the same feeding and cultivation. Most of them are as easy to grow as the vegetables.

Four Popular Perennials Grown From Seed.

Plants are difficult to grow in large scale operations because of the limited area over which they can be distributed satisfactorily and the high cost of packing such fragile subjects for shipment. The gardener who grows his own pays only for the seed. The task of caring for the plants and observing their growth is a fascinating recreation, if he is a true garden fan.

DEARBORN FARM EQUIPMENT

good farming starts with good plowing

## Dearborn LIFT-TYPE MOLDBOARD PLOW

No matter how much you disc and harrow you can't correct a poor plowing job. So why not get a plow that gives you a good job in the first place?

This Dearborn Moldboard Plow can be attached to a Ford Tractor in one minute, lifts and lowers by the tractor's Hydraulic Touch Control. Designed to give you even depth and clean, well-turned furrows with a selection of sizes and bottoms to fit every soil condition.

Phone or come in with your parts and service problems. Or just drop in and pass the time of day. We'd like to know you and your farm better.
