New York

## Cantilever Golf Shoe For Men

*A Flexible Shoe for Your Flexible Foot*

Comfortable footwear is essential for good golf and a pleasant game. The Cantilever Shoe has a flexible arch (no steel piece in the shank) and, therefore, conforms easily to the shape of your foot, rather than making your foot conform to the shape of the shoe as in ordinary shoes.

The flexible arch is so built that it gives a gentle and restful support to the arch of your foot, and allows the exercising of the muscles in your flexible foot, thus strengthening the foot and giving you added endurance.

The idea of strengthening exercises is the same as after the splint is taken off a broken arm. Gentle exercising through normal use brings back the muscles to normal strength.

The proof is in the wearing.
