# Cantilever Golf Shoe For Men

*A Flexible Shoe for Your Flexible Foot*

A good golf shoe must be comfortable, must have a sole that will not slip under any circumstances, and be made of leather that will stand many wettings.

With shoes that not merely cover but really fit the foot, your stance is better, your swing surer; and most important of all, your mind is on hitting the ball, and not on favoring your feet.

For comfort, a shoe should be built like a glove around the arch and heel of your foot, leaving the toes entirely free. It should be flexible and easy on your foot, supporting your foot where necessary and allowing, at the same time, perfect freedom which your flexible foot demands for the utmost comfort and ease in walking.

The Proof is in the Wearing.

*The Cantilever Shoe has all of these qualities—and more*
