Besides freezing, there are other excellent methods of preserving peaches while they are in abundant supply and the price is attractive, the specialist notes.

As with any fruit or vegetable and any method of conserving, it is important to begin with a recommended variety that has been harvested at its peak in maturity and flavor.

Canned peach slices or halves are wonderful to have in the winter for delicious desserts and salads, Miss Pritchard observes. Since peaches are an acid food, they are safely canned by the boiling water bath method. Your county extension home economics agent can give you the recommended procedure for this food conservation method.

Another real treat any season of the year is home pickled or spiced peaches. They may be canned whole, using the firmer, less mature peaches that we usually feel do not freeze or can quite so well as fully ripe ones.

An extension publication, "Pickles and Relishes," offers directions for making peach and other pickles. You may substitute the spices your family likes best for those spices suggested in the recipes.
