

# An Invention that Claims to Add 50 Per Cent to the Value of the Cotton Crop.

on exhibition in the office of the clerk of the Superior Court samples of pulp made of the hulls and stalks of the cotton plant. The pulp is as white as snow and can be converted into the finest writing paper. It is regarded as valuable and is the prohitherto deemed valueless.

The process by which it is made is new. It is a process by which the ligenous substances of the hulls and seed are dissolved. By this process over 50 per cent of the fibre is extracted from the hulls which have been regarded as fit only for fuel in the mills or for feed and fertilizing purposes, and which were sold for four dollars a ton. These converted into pulp will be worth four times as much or about forty dollars aton. From the stalks usually left in the fields to rot this new process utilizes about 38 per cent of fibre at a very small expense. It has been settled that there 'are fertilizing properties in the oil of the cotton seed and it is asserted that the fibre will not decompose for six years and connot be used as a fertilizer. This is why the woody matter eliminated from the out by a slow and expensive process.

In the new process the ligine is simply dissolved out and the snowy films of the ramie and the tawnier threads of the sugar cane are coaxed out as easy as the infantile Litten to

has bought all rights for the entire South. Mr. Forbes takes pleasure and pride in showing the samples and explaining the modus operandi of the wonderful process. Among the specimens are four or five varietios of pulp extracted from the cotton hulls, from the stalk, from the linting and dustings of the cotton mills from the cactus plant, from

siasm and does not hesitate to say that the new process will revolutionize the methods of the cotton planter. He believes it will make the cotton crop 50 per cent more valuable than it now is. Mr. Forbes has been all through Texas, Louisiana, Mississippi and Arkansas and he met with encouragement everywhere. He contemplates establishing mills loneyed men of this city, to whom

ver vention and shown the products, pave expressed their confidence in th him in pushing it forward.

The modes of death's approach are various, and statistics show conclusively that more persons die from diseases of the Throat and Lungs than any other. It is probable that everyone, without exception, receives vast numbers of Tubercle Germs into the system and where these germs fall upon suitable soil they start into life and develop, at first slowly and is shown by a slight tickling sensation in the throat and if allowed to continue their ravages they extend to the lungs producing Consumption, and to the head, eausing Catarrh. Now all this is dangerons and if allowed to proceed will in time cause German Syrup. It will give you
