Upon These Arguments We Rest Our Case

YOU, the buyers, are the real builders of wagons. You put the final Ockly upon the use of certain materials and construction when you buy a wagon containing them—and you want to buy a wagon that does not. We want to show you how the Thornhill Wagon is built. Upon a plain statement of facts we are willing to rest our case. We believe the Thornhill way would be your way if you should build a wagon.

THORNHILL WAGONS

Bolsters Can't Hang in Turning
In turning and backing up, with the ordinary circle iron, which is only a half circle, bolsters run off the end of the track and hang. It is difficult to make short turns and back up. The Thornhill full circle iron gives a continuous track on which the bolsters can turn.

Note the Adjustable Brake Lever
On the front bolsters of Thornhill wagons are heavy iron plates running along top and bottom—connected by rivets that run clear through the bolster. Strength and lightness are combined. Rear gears are strongly ironed. There are rivets on both top and bottom that extend the full length of the bolsters.

Long Wear Beds
Solid trust bars extend the full length of the axles giving them double strength.

If you examine the beds of Thornhill Wagons closely you will see at once the superiority of the construction. The bottoms are re-inforced over front and rear bolsters. Come in and examine this wagon for yourself. We will take pleasure and pride in showing you a Thornhill—The wagon made of tough highland oak and hickory—with features all others lack.
