DISEASES OF WOMEN.

The marvelous advances of recent years in medical electricity leave no room to doubt that it will soon be considered criminal to subject any woman to the knife before electrical treatment has been tried. If men for one week were subjected to one-half the butcheries practiced on women, a shriek of protest would be heard all over the civilized world. The most eminent of medical editors, Dr. Gould, commenting on President McKinley's case, says: "An operation, no matter how slight, is always attended by danger, in spite of all the triumph of modern science and art."

ON THE CONTRARY,

Electricity is absolutely devoid of danger in experienced hands. It is not only safe, but painless. In fibroid tumors, the dread of every woman, a cure can almost certainly be promised, and the medical journals now teem with reports of cancer also cured by this means.

IN THE LESS SERIOUS

But no less painful diseases of women its action is positively magical. A few treatments will yield results that years of medication could not produce. Like in other diseases, though, the right kind of electricity must be used, in the right way and in the right amount. We have earnestly studied this subject for more than ten years, and we think our experience is worth something to you.
