## SOUTHEAST BECOMING A LIVESTOCK SECTION

TEN DAUGHTERS OF A GREAT SOUTHERN SHORTHORN BULL

LSEWHERE in this issue Mr. W. W. Shay presents the inquiry, Will the "Hog Belt" move South? He then answers that peanuts cheaper corn, soy beans, fish meal and our long growing seasons for hog pastures will certainly do the moving. The boll weevil, as Mr. Shay aptly remarks, doesn't simply "advocate" diversification or "recommend" it; he COMPELS it.

The result is undoubtedly going to be a big boost for all forms of the livestock industry in our Southeastern states. Even before the boll weevil came, the Carolinas, Virginia and Georgia were making remarkable progress in cattle and hog raising, and

Numbers of Livestock (in thousands), 1917. and 1920.

their cotton-growing sections will go forward even faster from now on.

In this connection, we present the following striking table showing the increases or decreases (by thousands) in numbers of livestock in each Southern state from January 1, 1917, to January 1, 1920. Of course, the fearful drouth in Texas explains the decreases in cattle and hogs shown in that state, but all the South, east of the Mississippi River, shows a really astounding development, especially in hogs. In view of the fine speed we are already making, and with the boll weevil putting spurs to us for still greater speed, the South is indeed fast becoming a livestock section.
