HOLSTEINS
Facts in
BLACK & WHITE
Purebred HOLSTEIN COWS Lead
After a 6-year study of dairy operations on over 20 farms in three different parts of Minnesota, Prof. Cooper of the State Experiment Station finds that dairying is most profitable in the "Holstein Section" of the state.
In 1905 the average profit per cow was only \$10.10. In 1909, it had increased to \$38.45 per cow, or 43 per cent on capital invested. Increase was due to improved herds, purebred Holsteins having been substituted for grade beef breeds. As soon as dairying is put on a systematic basis, the Holstein cow comes to the front. If facts and figures mean anything to you, send for our illustrated literature.
