SAVE LAST YEAR'S SPECIAL AS WELL AS THIS ONE

OUR aim is to include in each "Reference Special" of The Progressive Farmer just as much new matter as possible—matter which has not appeared in any previous "Reference Special", exceptions being made only for a few unusually important subjects.

Every Progressive Farmer reader therefore will do well to file his "Reference Specials" together year after year. Then when he cannot locate needed information in one, he may find it in another. We here call attention therefore to the following important subjects treated in our 1921 Special and not repeated in this one:

Digestible Nutrients and Plant Foods in Feeding Materials; Cropping Fence Posts; How to Get Good Pastures in the South; Grazing Crops for Hogs; Planting Chart for All-the-year Garden; Treatment of Livestock Diseases, and many others of equal value.

Farm Women—Look for Woman's Reference Special, March 11
