SOWING GRAIN WITH TRACTOR AND DRILL

The grain drill is an important factor in fall seeding. Sowing with the drill helps reduce possible damage from winter-killing.

Seven Live Subjects in This Issue

HOW Club Work Helped a Tenant Farmer's Son.—We've often heard it said that where there's a will there's a way. Reuben Forman had the will and he found the way. Being a tenant's son didn't keep Reuben down. That's one of the beauties of club work, as it is being conducted by county farm and home demonstration agents. Through it, every farm boy, every farm girl has a chance for attainment. We dare say, Reuben, the tenant's son, will be one of the leaders in his classes at the college of agriculture.....Page 16

Cooperative Marketing Insures Fairness.—Don't be fooled by anybody who tells you that cooperative marketing will undergrade or underprice your products. Such tales are fabrications. Ask yourself what motive, object, or purpose cooperative marketing could have for doing any such thing. It can have none. But the old system of selling has. Cooperative marketing will also help farmers get on a cash basis....Page 13

Four Questions for Tobacco Growers.—What wages does your tobacco pay you for your work? Has your neighbor made his land more productive than yours? Have you tried remedies for these tobacco diseases? Why not try this program for cover crops? These are the four questions asked and discussed by Mr. E. G. Moss.....Page 8

Travel Notes from Virginia, North Carolina, and South Carolina.—It is a great help to good farmers to know what other folks are doing. When traveling the editor is always on the lookout for things of interest and value to Progressive Far-

mer readers. We are sure you will be interested in his most recent observations. They contain some valuable suggestions for farmers in every section.....Page 12

Organic Matter and Fertilizers Increase Crop Yields.—Mr. David Long, author of this article, is a soils expert of long experience. He takes all of us to task for the common fault of just seeing one thing at a time. He very aptly points out that organic matter in the soil is necessary if we wish to get full value from the use of fertilizers and that fertilizers are necessary to get full benefit of the organic matter we put into the soil. The Virginia experiments help us to see the necessity for both factors combined.....Page 10

Livestock Suggestions for September.—"Seeding the crops that are to supply any green feed the livestock will have during the late fall, winter, and early spring, and the saving of the feeds on which the livestock will be fed are the lines of work of chief interest to the livestock grower during the next two months," says Tait ButlerPage 3

Jelly Making: How It Is Done.—The jelly-making season is right on us. With Scuppernongs and wild muscadines ripening, apples falling from the trees, and crab apples growing more crabbed, it's high time to top off the supply of good things for winter. What is finer than the jellies that can still be made? "I promise success," says Mrs. Jane S. McKimmon, "if the housewife will follow directions to the letter." Be sure to read Mrs. McKimmon's "directions to the letter.".....Page 17
