tion, halted the speaker; " Will Mr. Vertrees inform us," he suggested gently but firmly," exactly which of the commandments he refered to.

The United States Senate is undoubtedly a dignified body, and the house of Representatives is little if any less dignified, but it is reported that the simple query upset the composure of the members than in attendance for the entire Tamaind

that sitting, Mr. Vertrees, cepty has not yet been made public, but it is a prettly safe guess that the next time he feels an inclination to quote the Bible he will refrain, unless there are several copies of the text close at hand for ready reference. the one for improvement.

THE SORT OF IMMIGRATION THE SOUTH NEEDS AND HOW TO GE

One of the South's greatest needs is immigration— of the right kind. Our whole section is too sparsely settled. Our eleven Southern States, excluding Texas, support only 16,000, 000 people of both races, and only 10 000,000 white people, while the same area in Europe supports 160, 000,000 white people. And it must be remembered that up to a certain point, which we shall not reach for centuries yet, and other things being equal, presperity depends upon density of population. Emerson was right wh he said that " every man who comes into the city with any purchasable talent or skill in him gives to every man's labor a new worth," and if any ignorant negro slave in the old days was worth \$1,000, certainly we may assume that a thrifty and intelligent Westerner bringing not only his self, but im most cases substantial accumilations as well, should be wort many times as much as an asset to

Of course we dont want the lowest European immigration. If we can get immigration from England, Scotland Ireland, Germany, Holland, Sweden, ect,-the countries whose blood has gone to make up our vigrous Amercan stock-it would be of great help to us We are all of such immigrants ourselves or desendanas of such immi grants. From some countries of South ern and Eastren Europe, on the other hand, immigration is of a decidely lo wer cider and objectional because of low standign of intelligence and effi-

On the very same principle, however, in migration of normal or high standard of intelligence and efficiency is desirable. Such immigration can be had, and ought to be had-in some measure perhaps from our English, Scotch Dutch and Irish kinsfolks a-Northern and Western States. For years now hundreds of thousands of the most enterpriseing and progressive farmers in the Middle West have been going into Canada with long, hard winters and bitter climate not only giving up American citizen-ship, but actually paying two or three imes as much for land in that inhospitable region as land of the same fertility commands in the South. We ought to have brought these men to the South. They know our instutions, our language, they are industrious, thrifty wide-awake, and many of them are of Southern ancestry, who should naturally come back home. Lets bring them back.

If there were no other reason for advocating such immigration from the Norh and Wetst, we should favor it as our surest deliverance from our race problem. The proportion of negroes to whites is to large in every Southern State, and our hope is that ultimately the itdes of migration and immigration will equalize population until the proportion of negroes in no State will exceed 20 per cent. We must train the negro-but at best the process will be slow, and at present would probably not be to much to say that in considering our whole population, including our great constructive leaders and captains industry, the average negro in economic worth net productiveness, and efficiency is only half as useful the overage white man. In other word rating general averages of eficiency we should put the white man at 100 and the negro at 50, so that a co try half white and half black would eor a handicap of 25 per cent. as com pared with a county with an exclusive white population of a normal degree of eficiency.

Whether or not the difference is as much as this, certain it is that the larger proportion of whites, the highthe average of eficiency, the more prosperous will be our every industry, and the better it will be for every individual citizen, includ ing the negroes themselves.

There are just two basic and fundamental ways to build up the South. First and of paramount importance is Education, the development of the people already here; second is immigration, getting more people to come

In the last census year North Caroliha, Virginia and Georgoa each had in round numbers only 1,200,000 Sout Carolina had less than 600,000 whites when it should have had 3,000,000. And even th en not one of these States, including its negro population, would be one-third as thickly settled as Massachusetts; consider for a m ment how much more important every instution in the State would be; harm would have been done as the sections which must other wise re-American press has survived such main dormant and back-ward for long statements several times in the past long years; how important our cities and will in all human probability, should become; and how much more be called upon to survive a few attractive would be country life in similar ones in the years to come. our thickly settled communities, and
