The room was not nice enough to suit them, so they papered and painted it, and it is said they did their own carpenter work. There was not a man on the job. These are all new women. -Allegan (Mich.) orquering scrofula in whatever way may manifest itself is youched for thousands who were severely afflicd by this prevalent disease, but who ow rejoice over a permanent cure by od's Sersaparilla Scrofula may

stems of cereals and grasses in late summer and fall. These black spores are the winter or resting spores and will under favorable circumstances retain their vitality in the straw or even on the ground for a year or more. Eventually some of them alight upon

it, varying the stock collar to match and Accidio spores and these the uredo and teleuto spores. The three fungi which attack grasses and cereals do not all have the same alternate host. Pucinnia graminis has for alternate hosts, the barberry. mahonia and probably other shrubs. Pucinnia coronata, has for its alternate hosts the buck thorns, Rhamus lanceolota, frangula and other species. Pucinnia Rubigo-vera has for its alternate hosts the common and disagreeable weeds Viper's buglass, Echium vulgare, and Gromwell, Lithospermum arvense. Knowing that to complete their cycle of growth these fungi require a host widely different from grasses and grains if we could extirpate all such

in North Carolina.

pests in one or two seasons even by less than was actually made for sale. black form, the teleuto spores, which are then able to stock the ground or in-

low to remain. As these spores are extremely small incredible numbers the few aiternate host plants which may survive even the most watchful care may supply ecidio spores enough to infect hundreds of acres of grass or grain.

Common and destructive as the rust fungi are in the United States, in Australia they are still more so and soveral conventions of scientific men and practical farmers have been held there to devise methods for repressing the pests but so far without much success. Practical experience recommends the following measures: 1. Use dry or well drained land for

2. Plant only hard stemmed, hairy,

early maturing varieties of wheat 3 Plant those varieties which in your locality resist rust best-the socalled "Rust proof" wheat and oats 4 Sow thinly to give plenty of sanight and air to the plants. 5. Prow the land deeply as soon as the crop is harvested to destroy volunteer growth or burn the stubble and straw on the field. The latter plan is

. Carefully search out and destroy all alternate host plants found within one half mile of a wheat or oat field. 7. Rotate crops so that some crop other than grasses or cereals will come on the land each two years out of three. 8. The use of fungicidal sprays on growing grain has not so far given satsfactory results. The best fungicides for this class of plants are: 1. Simple solution of Iron Sulphate. 2 Copper sucrate. Directions:-Apply in the finest possible spray as soon as the grain begins to flower-repeat every ten days until grain is in the dough. Then harvest it. For formulas for preparing these fungicides see bulletin No. 84 of this Station-Formulas 1 and 3 page 7. - Gerald McCarthy, N. C. Experiment Station.

Advanced Monthly Summary of Meteoro logical Reports for North Caroline, September, 1895

The North Carolina State Weather Service, issues the following advanced summary of the weather for September. 1895, as compared with corresponding month of previous years:

TEMPERATURE. - The mean tempera ture for the month was 74.2 degrees. which is 4.0 degrees above the normal. The highest monthly mean was 78. at Newbern; lowest monthly mean 62.6 at Linville. The highest temperature was 104 on the 22d and 23d, at Tarboro lowest 32 on the 30th, at Blowing Rock and Highlands. The warmest Septem ber during past twenty-two years was in 1881, with mean 749 degrees, the next warmest is September, 1895. The coldest September was in 1875, mean 67.0 degrees.

PRECIPITATION. -Average for the month 1,25 inches, which is 3,40 inches below the normal. The greatest amount was at Hatteras; least amount 0.05 at Kitty Hawk. The wettest September occurred in 1877, with an average of 10 13 inches. This September of 1895 was the dryest on record for past twenty-two years.

WIND .- Prevailing direction, Southwest. The normal direction as deducted from many years observations is northeast. Average hourly velocity, 6.5 miles. Highest velocity, 48 miles an hour from the Northeast on the 50th at Kitty Hawk.

MISCELLANEOUS. -Thunderstorms oc curred at various places on the 1st, 5th, 6th, 8th, 9th, 13th, 16th, 17th, 18th, 19th. Lunar halos on the 2d, Solar halos on 2d and 3d. Meteor observed at Settle on 22d. Frosts appeared in 29th and 30th.

The North Carolina Agricultural Experiment Station During 1894

The above is a title of a work issued by the station. In connection with the volume. "North Carolina Weather During 1894," it includes all the finished work done by the station during 1894, are recorded 140 of these, and a more expense. detailed summary might easily multiply them to a considerable degree.

The report includes all the bulletins issued during 1894, from Nos 94 to 110 readily be found. The general subjects | not contain so much sugar. embraced in addition are the operations of the Fertilizer Control Station and the State Weather Service, which are integral parts of the Experiment Sta-

detail. The above report is not sent to the full mailing lists of the station, but is supplied to those in North Carolina who apply for them. To others on receipt of 25 cents.

Co-Operative Dairying.

The station has been ready for some time to assist farmers in undertaking some co-éperative dairying.

A bulletin (No. 112) has been issued by the North Carolina Agricultural Experiment Station, describing the methods deemed advisable for raising trucking crops especially in North Carolina. These crops are asparagus, beans, beets, early and late cabbages, cauliflower and lettuce, cucumbers, celery, egg plant, muskmelons and watermelous, onions, peas, Irish and sweet potatoes, radishes, spinach, tomatoes and turnips. There are 68 pages devoted to this bulletin and the various subjects are treated in a thoroughly practical way. An appendix of 14 pages describes the various formulas suggested for the several crops, what ingredients to use to give the desired best where grain is grown on a large percentages for the different crops, and how to mix them. This bulletin is sent free to parties in North Carolina requesting it, and to others on receipt of 10 cents in postage.

> Questions and Replies. The Station will be glad to extend its sible by the member of the

turist N. C. Experiment Station. It depends upon how you propose to sell your onions. If you wish an onion to sell early as a green bunch onion, I would advise you to plant in October sets of the Early Pearl, or of the white potato onion. If your object is to grow a mature crop of onions, that will keep for late sales, then I would sow in February seed of the Southport White Globe, or the Opal (red). Or you may, if you have some glass sashes, sow seed of the Prizetaker in a frame under glass, in January, and transplant the young plants in March and get a crop of extra sized onions. But this variety must be sold as soon as ripe for they will not keep. The big yellow onions now seen at the stores are of this va-

beetle that is destroying my cabbages and turnips?—J. R. G., Durham, N. C. [Answered by Gerald McCarthy, En

Fenopin or Harlequin Bug, now becoming the worst pest of the cabbage | would like to at times. A king's life is | day of October, and when I send to a family every where throughout the South. This pest seems proof against all available poisons. Hand picking is the only practical remedy for this insect. Use a shallow pan with a handle. About one fourth fill this with water and on the water pour a film of kerosene oil one-fourth inch thick. Place the pan under or at side of the plants and shake or jar the plants; the bugs will easily drop into it and be killed by the oil. Be careful that the oil does the western portion of the State on the not spatter on the plants as it will burn them.

FOR LITTLE FOLKS.

NOT MUCH FUN.

Being a King, Young Alfonso Cau't Romp and Play Like Other Boys. If there is anything a healthy, active boy hates, it is being watched all the time. "A feller can't do nothin when nurse is always round," more than one energetic little American has sputtered after being dragged out of the water because the vigilant nurse thinks he will

fonso XIII, king of Spain, undoubtedly - on her wedding day the completion of a feels much like other growing boys on this matter. Young Alfonso is over 9 now, but he is watched and guarded as carefully as he was when he became king, a mere baby in a cradle. Alfonso doesn't like being watched either. He thinks he is old enough to go in swimming without having a nurse along to see that he

doesn't get into deep water. Poor boy,

nobody has taught him how to swim, so the cloth," said the aunt, and she got it,

that he has to paddle along the shore owning now a set of which a princess

and wonder why he can't jump around might be proud. - New York Times. and have fun as other boys do. Most every boy thinks he would just like to be a king for awhile and order everybody to do things for him, but they would soon get tired of the situation. Just think, no fun at all such as American boys have, for him. He can't, in the first place, have any playmates, for no boys in Spain are supposed to be good enough to associate with him, and what fun can a fellow have with no boys to play with? He has, to be sure, two sis-

ters, but they are older, and what boy of 9 cares to play with dolls with a conple of girls? He has one advantage, however, with his older sisters that ter man, has opened a first-class oyster come and Low Rites. many boys would like to have. They can't "boss" him. All he has to say to Peterson's store, where he will be SWINDELL HOTEL, them is, "Remember that I am king," pleased to see his old friends and rat. them is, "Remember that I am king," and they have to bow down and beg his forgiveness. That in itself is some compensation for being a king.

The worst part of his life is that he has to be dressed up nearly all the time. It would never do, you know, for any body, even for his mother, to see himthe king-in soiled clothes or with dirty face and hands. So he has to be washed a score of times every day and has to put on a clean suit of clothes at tice is hereby given that the taxes for least three or four times a day. When 1895 will be collected promptly. I he exercises, he goes to a room with one | shall use every means to collect as the of his teachers, who shows him how to law directs. It will be to every one's swing dumbbells and Indian clubs, and how to draw himself up on the horizontal bar. He never plays any outdoor and some for 1893. I have employed games after dark, though, of course, he an extra man to commence on the 1st too precious to risk his taking cold by lax payer for any back taxes that may being out in the damp night air. He be due and fail to get it, I shall progoes to the theater, though, as often as | ceed to collect as the law directs. he wants to, and that is something that many an American boy would like to do. He is a soldier, and that's how he gets most of his fun, for he has a small

army of boys in Madrid, where he lives in winter, and he frequently marches at the head of this army and sometimes drills it. He knows a good deal about marching, for he has been instructed by the best teachers in the world. He never tires of learning new points about army life, for he has been taught to know that some day he must direct the armies of his kingdom. He is the generalissimo of the Spanish army and the grand master of all the military orders of the kingdom. His names are Alphonse Leon Maria Francisco Pascal. He does not know his last or family name. Kings don't have any-in theory.-New York

Weight In Football. The greatest danger, apart from those which arise from the abuses that all lovers of this manly sport condemn, comes from inequality in weight of the players. Men should never be allowed to play with boys nor big boys with little ones. The rules which require the average weight of teams to be given in the challenge may often be nullified by the challenging team having two or more members so much beavier than the others that the average does not fairly represent the players. By this means teams composed mainly of young and slender boys meet antagonists whose bulk alone creates serious danger .-

The drought continued during the Who is not weary of the woman who has no resources of entertainment but these tiresome themes? She is everywhere, and she talks only of this threadbare "trinity" of topics as if there were no clever new book, no delightful collections of pictures and no practical discoveries in the realms of science. It is only fair and just to appreciative women

Rust in Small Grain.

The rust disease of wheat oats, barley and grasses generally, are caused by one or more of three species or microscopic tungi. The most commoon rust on grasses in this State is Pucinnia graminis, generally called "Mildew" on grasses, and "Black Rust" on cereais. Our most common rust fungus on small grain is Pucinnia Rubigo. vera, usually called "Red Rust." Pucinnia coronata, also called Red rust is the third. The last species is more common on oats than on any other and might be properly called oat rust. All three species belong to the class of parastic fungi called Heteracismal, that is to say, fungi which at different times in the cycle of their growth live as parasites upon two or more hosts. Grass mildew, Pucinnia graminis, begins its spring growth by attacking the young leaves of the Barberry, Mahonia, and possibly other shrubs. Upon these it produces small redish patches with elevated margins

called "cluster cups." These cups are filled with the red Aecidio spores of the fungus which wafted by the air or carried by insects, birds or other agent fall upon the leaves of grasses or cereal grains and there penetrate the leaves through the breathing spores. Once within the leaf the spore sends forth a net work of root-like tissue called Mycelum. Through this, it sucks up the sap that should go to nourish the seeds he glands of he neck, or bresk out in of the plant and these latter shrivel readful running sores on the body or up. Very soon the fungus bursts imbs. Attacting the mucous ment through the epidermis of the leaf and rane, it may develop into catarrh or appears upon the outside as the well lodging in the lungs lead to consump- known, elongated, narrow red spots, ion Come as 't may, a faithful popularly called "Red rust." These course of treatment with Hood's Sar- are the uredo spores of the fungus and saparilla will overcome it, for working are able to reproduce themselves upon the same or other grass like plants and subsequently they produce the last form in the life cycle, the black, telento spores which form the narrow black lines seen on the leaves and

pound realized for the making and seliing. When the selling price was 27 feet any chance alternate host plant cents per pound there was realized \$0.597 on ten pounds and seven ounces of butter. This would be 5.7 cents per splash his pants. And poor little Alpound which, if it could be carried out and light and are produced in almost on a sufficiently large scale, would pay well. It would also pay well to produce milk at 11 cents per gallon for the butter fat contained in it, and have the skim milk returned to feed pigs, calves and chickens, or possibly lambs -F. E. Emery, Agriculturist, North Carolina Experiment Station. Trucking In the South.

usefulness by answering as far as possible questions on agricultural topics sent by any one in North Carolina who may desire to ask for information. Addres all questions to the North Carolina Agri-cultural Experiment Station, Raleigh, N. C. Replies will be written as early as staff most competent to do so, and when, of general interest, they will also appear in these columns. The Station desires in this way to enlarge its sphere of usefulness and render immediate assistance to
