

EVENTS OF INTEREST TO LITTLETON CITIZENS

PACIFIC GLIMPSES
Today you smile and are kind
Your waves touch the shore gently,
Leaving with soft caress
The happy sands.

Ere this, I saw your anger
Strike with vicious might
And scatter widely
The fleeing sands

I think I share your secret
And that, today, you are kind
Because 'tis God's Day
And all is peace.

The spacious home of Mrs. Newsom was beautiful with decoration of cut flowers in class colors, blue and white.

The dining room table covered with an exquisite lace cloth was centered with a large white cake, on which was written in blue letters the Class motto, "Never Anchored". Silver vases of blue flowers and white burning tapers completed a scene of loveliness as the class stood around the table enjoying cake and cream, which also carried out the class colors.

Bright Suggests Control Methods Harmful Insects

By R. H. BRIGHT
Teacher Vocational Agriculture
John Graham School

Insects are probably doing more damage to crops at the present time than at any other season of the year, except in late summer when the boll weevil infestation is greatest. This is especially true of vegetables.

Irish potatoes will suffer great damage within the next few days from potato bugs as they are commonly called. Beans and peas will be attacked by the Mexican Bean Beetle, cabbage by larvae and bugs. Other vegetables by aphids or plant lice as they are commonly called.

The control of all insects mentioned above is rather simple. Insecticides are inexpensive compared to the damage done. A great number of growers are afraid to apply insecticides because of some damage done in the past. We have on the market at the present time several different insecticides and it is difficult to know just what to buy to control the particular insect that you are having the trouble with.

For the bean beetle, the potato bug, the cabbage bugs and worms, you will find that Arsenate of lead mixed in the following manner will control them. Mix one part of lime or ashes or flour with one part of Arsenate of lead and apply as thickly as you think necessary. This insecticide may be applied without any danger of burning or

damaging the plant.

Paris Green is sometimes used but this will burn the plant if the person applying is not careful. Calcium Arsenate will also burn plants.

The insecticide may be applied as a dust or as a liquid. The dust will be found to be more satisfactory if applied early in the morning or late in the afternoon when the plant is damp.

For the aphid or plant lice you may apply Nicotine Sulphate or Black Leaf Forty as it is called. It will be necessary for you to apply this insecticide as a spray rather than a dust. Mix one tablespoonful of black leaf 40 with one gallon of water and cover the leaves well under the bottom as this is the greatest damage done.
