#### Gives Details Of Farm Program

Soil conservation grants of 15 cr 20 million dollars probably will be paid North Carolina farmers this year under the new farm program. The exact amount, said Dean

O. Schaub, of State College, will depend largely upon the number of farmers entering the program and the amount of land on which grants are to be paid.

Although no contracts will be signed, as under the old AAA, farmers will be paid for devoting part of their land to soil-building or soil-conserving crops, he explained.

The three major objectives of the soil conversation and domestic al-Conversation of the soil through wise use of the land. This will also

building or conserving crops. A diversion payment of six cents of land thus taken out of cotton the husband should die?

has been recommended. The recommended tobacco payment is at least five cents a pound, but in no event less than the rate per pound on cotton.

For peanuts, the recommended in no case less than 25 per cent of

the rate for cotton. Diversion payments on other soil-depleting crops will be fixed

later, Dean Schaub stated. The maximum amount of cotton land on which diversion payments will be made for shifting to soilbuilding or conserving crops is 40

per cent of the base acreage. The maximum diversion on which tobacco payments will be made is 30 per cent of the base, and the maximum for peanuts is 20 per cent of the base, the dean pointed

No diversion payment will be made on food and feed crops if the farmer, in diverting land in these crops to soil improvement, reduces his food and feed production below the amount needed on his

### Running Farm Is Family Affair

Running the family business should be a cooperative enterprise, said Miss Pauline Gordon, extension specialist in home management at State College.

A man is not protecting and providing for his family in the best way when he keeps all business transactions and worries to him-

self. she stated. He needs the help of the family circle and the members have a right to know something about his business. This is especially significant in the case of a farm family.

Not only can the family help the husband and father with his problems, they can also plan their own affairs more satisfactorily when they are aquainted with the family's business.

The training young people get in this way will be of great value to them when they go out into the world, Miss Gordon added.

Discussions of the cost of shelter, food, clothing education, travel, axes, automobiles, and entertainment can be made a valuable part of the childen's education.

Every family should study its income and so arrange its mode of living not to exceed that income. The bases and normal average By working together, the farm family can often develope projects

which will increase its income. The family council, in which all members pool their best judgement,

#### Care Of Chicks Shows In Hens

The future success of the poulrate is 1 1-4 cents a pound, but try flock depends a great deal upon the seed in storage for two years the care and management of growing chicks in the spring.

Give them proper care, said Roy they will grow into strong, vigorous, profitable birds.

Some of the fundamentals to observe while the chicks are young were pointed out as follows:

Do not overcrowd. See that there are not more than two chicks for each square foot of floor space in the brooder house.

Provide two half-gallon drinking founts for each 100 chicks. One five-foot mash hopper will be enough for each 100 chicks during the first three weeks. From the age of three weeks

100 chicks should have two mash hoppers four inches high, six inches wide, and five feet long. Inadequate feeding and drinking facilities is one of the worst

until they reach broiler size, each

faults in poultry raising. Have adequately controlled ventilation. More chicks are killed or weakened by overheat than by

chilling. Keep the feed hoppers filled with a well balanced mash.

Aim to have the chicks consumscratch feed at the sixth week. Maintain rigid sanitation.

Cull all slow developing chicks. prove profitable.

When the weather permits, get form of protection, Dr. Shaw said.

will lead to sounder decisions on the chicks out on the ground. A The other part of the grant will various problems and at the same great deal of benefit is gained from

### Disease Checked By Ceresan Dust

Two methods of controlling the damping-off disease in cotton are recommended by the State College agricultural extension service.

One is to treat the seed with Ceresan dust and the other is to keep before planting it, said Dr. Luther Shaw, extension plant pathologist.

The disease is caused by a num-S. Dearstyne, head of the poultry ber of organisms, some of which department at State College, and live over the winter in the lint on cotton seed, he said, but it seems they cannot live on the seed much longer than one year.

> Sometimes the organisms are in the soil. When the land is infected, Ceresan dust treatments give the most effective control, he explained. for enough dust will cling to the lint to protect the seed and young plants through the seedling

Weather conditions favorable to to occur early in the season, Dr. damping off disease is more likely Shaw stated, and for this reason cotton planted a little later than usual will stand a better chance of

avoiding the disease. Three ounces of two per cent Ceresan dust will dust a bushel of seed. It may be obtained from any of the larger seed houses for about

75 cents a pound. A discarded churn, a feed mixer, a home-made barrel duster, or a commercial treating machine may be used as a container. Fill the container half full of seed, put in the ing about equal parts of mash and right amount of dust, then agitate it briskly for five or ten minutes. Store the seed in a bag or bin until ready for planting. If the These seldom "come through" and dust has been mixed thoroughly with the seed, it will give a good

FOR THE CONSERVATION OF LOCAL BUSINESS TO LOCAL BUSINESS FIRMS

Published By

THE WARREN RECORD

Is A Business That Isn't Worth Advertising Worth Patronizing?

Occasionally we see a man in business-actually trying to establish a business-who says he does not advertise because he would have to increase his prices if he did.

The truth of the matter is that the merchant who does not advertise and increase his volume of sales must increase his prices on the limited amount of stuff he sells and charge more than the merchant who by the use of regular advertising turns his goods three or four times to the other fellow's once. It is simply the old story of the nimble nickle.

The nationally advertised brands of goods, with few exceptions, are the best and lowest priced products that we can buy today. The big busy store that advertises and draws trade for miles around is always the best and cheapest place to trade, and has always been so.

No one ever hears it said of the big mail-order houses that their great advertising expenditures in sending out millions of catalogues and follow-up literature, including large monthly supplements on groceries, clothing, dry goods, shoes, furniture, hardware, farm implements, paints, wall paper, etc., made them charge more for their goods.

But you do hear just the opposite. Ask any farmer who buys goods of a mail-order house why he patronizes them and he will tell you that he believes he does a little better in the way of price. If you ask him why their prices are lower than the local stores, he will tell you it is because of the great amount of business they do through sending out catalogues and other advertising matter regularly to every farm home throughout the country.

The home newspaper affords the only effective means of counteracting the trade-pulling influence of these mail-order catalogues in taking business away from your home community.

By the use of regular space in the local paper a merchant can soon educate the home folks to appreciate the fact that he is doing everything he can to serve them to the very best of his ability. This cannot be done as quickly and successfully in any other manner than by advertising.

Advertising is the economic factor of business. Without it few buyers would know of the exceptional values offered and the turnover would be reduced to almost nothing. Merchants would be compelled to increase their prices in order to remain in business, and higher prices would mean fewer buyers and business failure to those merchants who have not taken the time to study and learn the real value of persistent advertising.

Meet your advertising competition in our newspaper—Talk to the home folks every week.
