The Fabric Doctor

"Why Does Terry Cloth Wear Out So Quickly?"

Asks Mrs. E. V. S.

Dear Mrs. E. V. S.: You feel that cleaning your terry cloth robe has weakened it, causing it to wear out quickly. To understand why terry cloth does not hold up well, you must understand the terry weave. "Terry-weave" fabrics, robes, towels, mats have two distinct thread systems. Each serves a definite purpose. "Ground threads" hold the material together as a unit. On this foundation loops or pile threads are woven so as to absorb moisture. While the bulk of the "terry weave" makes it seem stronger, actually it is no stronger than the "ground threads" that hold it together. Terry cloth is generally made so that only every second or third "filling" thread will be long enough to reach the outside yarns of the selvege. They are held by about one-third of the "filling threads". Once the "filling threads" are worn, the support for the outside warp threads is gone and the selvege falls apart. "Terry" fabrics are deliberately made with loose, soft yarns to absorb moisture. Strength is of minor importance here and absorption is gained at the expense of wear. That is why terry cloth weaves deteriorate more quickly. It is not the manner in which the cloth is cleaned.
