Soil Conservation News

Land Smoothing Makes Tractor Farming Easier

Soll Conservation Service One of the most needed jobs on tobacco farms in Warren County is land smoothing. In this operation eroded land is top soiled, outlets are constructed to take excess water from the field, old bench terraces and other obstructions are removed, low places are smoothed over, and parallel terraces are constructed. The operation not only makes the field more productive, it leaves it so tractor farming is easier and faster

Few farmers have the equipment needed to do this work, so contractors with heavy equipment are employed. Soil Conservation technicians stake the system before the equipment moves in, laying out the waterways, parallel terraces, and other work. If the farmer wants to do all the work at one time stakes are set showing how much to cut or fill at each place. This operation is not expensive as tobacco land tobacco land last winter. goes. On an average five acre tobacco field one acre, or 20%

about \$300 per acre less than the land smoothing operations, as well on tob good tobacco land, the land The Warren Soil Conserva- land smoothing.
