Rural Community Development Goals For 1962

Since Rural Community Development is a group-objective program, with the objective of people coming together to help in the development of community, county, and self, we have to keep in mind the changes rapidly being made that influence our growth and development — changes that guide us to direction — changes that tell us we will change—regardless of whether it is forward or backward.

Since the last five years Warren County has lost 611 non-white farm families. We now have 1,301 non-white farm families residing in this county. There are 683 owners and part owners, 618 tenants and sharecroppers; 48.3% of all land in cultivation is by non-whites. Also, this county ranks 14th from the bottom in per capita income—and there are 100 counties in North Carolina.

What can Rural Community Development do to increase farm income? First, 150 farm families can add one brood sow to their program and top out 20 pigs—totaling 3,000 tops. Today's market price of \$15.00 per hundred pounds would bring \$30.00 per pig, times 3,000 hogs—equally \$90,000 income.

Secondly, of the 1,000 4-H's, 400 4-H's could take one brood sow with two litters of 10 pigs. Multiply 20 pigs time 400 and you get a total of 8,000 pigs. Sell them as feeder pigs at \$12.00 each, giving a \$36,000 new income.

Thirdly, 20 families can add 5 cows each to their milking herd. Each cow returning an average of \$25.00 per month times 10 months would equal \$250 per cow times 100 cows (5 cows to 20 families). This would give a total of \$25,000 from milk, and this is not to even mention the calves and manure.

Fourthly, 50 farm families could raise 2 beef animals selling at 20c per pound. A 500-pound animal would bring \$100 each. One hundred beef animals for \$100 each would gross \$10,000.

Fifthly, practically everyone raises cucumbers. You can increase your yield to the state average of 150 bushels per acre—an increase of 50 bushels of No. 1's. If 600 families would do this, it would increase yield 15,000 bushels estimated increase income of \$125 per family for 600 families—equally \$74,000.

Sixth, in tobacco, the county average is 1,400 pounds. Five hundred families could boost the yield by 100 pounds per acre averaging 2 acres per farm by 500 families. This would give a \$100 increased income per family for a gross of \$50,000 income.

Seventhly and last, in the area of cotton production, 1,000 families could increase yield by 1/2 bale, giving \$90 extra per family. The gross for these 1,000 families would be \$90,000.

Now let's take a look at

what we have: Top hogs at \$80,000; feeder pigs at \$90,000; milk at \$25,00; beef at \$10,000; cucumbers at \$74,000; tobacco at \$50,000; and cotton at \$90,000. These seven items bring a grand total of \$435,000—nearly a half million dollars.

Monday, March 26: 1:30 p. m., Epworth Home Demonstration Club will meet at the home of Mrs. Patience Hill. 10:30 p. m., Olive Grove Home Demonstration Club will meet at the home of Mrs. Nannie Wright with Mrs. Juran Wilkins as co-hostess.

Tuesday, March 27: 1 p. m., Wise Home Demonstration Club will meet at the home of Mrs. Ida Baskerville. 2:30 p. m., Norlina Home Demonstration Club will meet at the home of Mrs. Mable Sledge.

Wednesday, March 28: The State Council of Home Demonstration Clubs will meet in Raleigh at the Memorial Auditorium. The meeting will begin at 10:30 a. m. All interested persons, men and women, are invited to attend. Thursday, March 29: 12:30 p. m., Fork Chapel Home Demonstration Club will meet at the home of Mrs. Octavia Williams.

7:30 p. m., Liberia Home Demonstration Club will meet at the home of Mrs. Annie Young. Friday, March 30: 1:00 p. m., Jordan Hill Home Demonstration Club will meet at the clubhouse with Mrs. Ida Palmer as hostess.

GARDENING TIPS Have you thought about those little things that you can do to improve your home surroundings this year? Are you interested in having beautiful lawns, lovely flowers and trees? Here are some suggestions that will help you to beautify your home surroundings.

Crabgrass—friend or foe? Now is the time to act if you do not want crabgrass this summer. A new material called "Dachalt" is very effective against crabgrass. Apply it before seed germinate and you will see little crabgrass for the entire season. When used according to direction it has caused no damage to established turf. It also gives good control on annual weeds. It is not effective against established crabgrass or weeds—use it before crabgrass or weed seeds germinate. One application lasts well into the summer, if not all season.

Another material, "Trifluralin," is equally as good or better—if it is available. It is new and may not be generally available this year.

It's time to eat. For plants, that is. Plants have started growing so let's give them a square-meal to push them along. How much? It depends on your soil. Feed plants growing in poor soil, especially near trees, one or more times a year. Other plants may need no fertilizing at all.

Use an 8-8-8 fertilizer for most plants. Follow with one or more light applications of nitrogen if needed. Manure is also excellent, but it may contain lots of weed seed. If you prepare new beds, work the fertilizer into the soil. Phosphate moves very little in the soil, therefore, place it deep to stimulate deep root growth. Use two to four pints (one pint—one pound) of fertilizer to each 100 square feet. Follow this with light applications of nitrogen if needed through the summer. Go light in fertilizing azaleas, especially small plants. Make two or three very light applications with the last application going on by July. Around shallow rooted plants (boxwood, azaleas) or mulched plants, leave the fertilizer on top of the ground. Use 20 pounds per 1000 square feet on lawns.

A lot of the pruning can be done during the growing season by cutting long or short stems depending on the growth by the plant. If this is done about the only other pruning necessary is to remove diseased branches just before growth starts in the spring. Those roses with exceptional vigor should be pruned to 3 to 5 canes and these cut back to about two feet. The less vigorous ones can be left alone except for thinning out and removing diseased wood. This type pruning should be done about the time growth starts. With Climbing roses it is largely a matter of keeping them thinned out and the branches shortened when necessary. Light pruning can be done at any time. Early spring just before growth starts is a good time to do the thinning out.

Get busy—and beautify your home surroundings!

HD Council Holds Second Meeting Of Year Monday

The Home Demonstration Council held its second meeting of the year at the Community Center here on Monday with the president, Mrs. Celia Alston, presiding. The devotion was led by Wise Home Demonstration Club.

The guest speaker for the occasion was Mrs. Josephine S. Weaver, District Home Economics Agent, A. and T. College, Greensboro, who gave an inspirational talk to an audience of 138 HD Club officers and members.

Mrs. Weaver pointed out that in order to meet the changes Home Demonstration Club members must pass the information they receive to non-club members, invite them to the meetings and to other special events—not merely to join the club, but to give them a chance to learn what Home Demonstration is all about and what can be gained from this organization. She further stated that the responsibilities of HD Club members are many, and due to the changing role now being witnessed, leaders will be responsible for helping to recruit and train more leaders for better homemakers of tomorrow.

A social hour followed the meeting with a delicious repast served by Coley Spring and Cool Spring HD Clubs.

Embroidery Club was receptionist and prepared a beautiful arrangement of jonquils and greenery for the speaker's table. The clubs present and their attendance were as follows: Burchette, 10; Cool Springs, 7; Coley Spring, 8; Elam, 1; Ellington, 7; Mayflower, 12; Norlina, 3; Olive Grove, 14; Pine Grove, 7; Snow Hill, 6; Embro, 7; Epworth, 4; Fork Chapel, 9; Hecks Grove, 3; Jordan Hill, 5; Liberia, 3; Macon, 1; Shooco, 7; Thrift Hill, 4; Vaughan, 1; Warrenton, 5; Wise, 10; Longs-Arcola, 2.

Watch your plants and keep them in a healthy growing condition. In good soil it is possible to get better than two feet of growth per year on magnolia, pecan and many other medium to slow growing trees, if fertilized and watered adequately.

Use an 8-8-8 fertilizer for most plants. Follow with one or more light applications of nitrogen if needed. Manure is also excellent, but it may contain lots of weed seed. If you prepare new beds, work the fertilizer into the soil. Phosphate moves very little in the soil, therefore, place it deep to stimulate deep root growth. coffee. The Stallings home bore lovely arrangements of spring flowers.

Had Better Move A gentle Quaker roused from sleep by a strange noise investigated and found a burglar at work. The Quaker went for his gun and returned to the room where the burglar was occupying himself with the family silver. He stood in the doorway and announced quietly: "Friend, I would do thee no harm for the world, but thee standest where I am about to shoot."
