

AS WE BEGIN OUR 25TH YEAR IN BUSINESS IN WARRENTON WE ASK YOU TO USE OUR TRAINED TECHNICIANS AND MODERN EQUIPMENT TO HANDLE ALL YOUR NEEDS.

An orbitread machine allows our personnel to use bulk rubber in preparing all of the hot caps. This modern machine applies 16 pounds of rubber a minute to the tires, and allows for recapping a tire with no splice, making for a better balanced, smoother tire.

This is one of several trucks used to deliver merchandise to surrounding towns and counties. We supply recaps to more than 80 accounts outside of Warren County within a 120-mile radius. We offer passenger and truck recapping and vulcanizing for off-the-road equipment.

This new front-end machine allows for front and rear wheel alignment. We also have a pit type machine which accommodates up to one-ton trucks and crew cabs in our up-to-date service department.

Air Conditioner Specialist

A service truck with a boom attached is lifting a skidder tire. The truck allows one man to handle large tires and is equipped with water and air to allow for on-the-farm service.

LARGE TRUCK TIRE BALANCING

WE OFFER COMPLETE AUTOMOBILE AIR CONDITIONING SERVICE

This giant piece of equipment enables Tar Heel Tire to vulcanize large off-the-road tires. We also offer cold cap truck recapping. This technician is repairing a \$3,000 tire at a cost of only \$225 to the customer. We invite all our trucker friends to come by and check our prices on truck recapping.
