POOR HARNESS. There is great difference in the quality

of harness, and this largely depends upon the leather. Only that which is thoroughly tanned should be used. The sweat from horses working or hotly driven eats into the best leather fast enough, but for that poorly tanned it is almost immediately destructive. In buying harness it is true economy to pay a higher price and get the best .- Boston Cultivator.

PROTECTING TENDER ROSES.

Wait until the ground begins to freeze, then peg down the branches of the tallest plants, after which cover all with a moderate light dressing of coarse stable manure, if you can get it; if not, use salt meadow hay or other coarse similar material as a protection. A very slight covering will preserve the plants. The main point to be observed is to have the plants shaded, thereby preventing the alternate freezing and thawing during the winter months. It is not so much the low temperature that injures these half-hardy roses as the suiden and frequent changes which occur when the plants are fully exposed to the sun and and it will stick better, wind in winter. In the spring the plants should be pruned and all dead and injured wood cut away, for it is upon the seen them earning a comfortable living, new shoots of the season that the flowers | making even more money than big farare produced, and not on the old wood. -New York Sun.

CAUSE OF STRINGY MILK.

Stringy milk, thought to be caused by dry feeding and the want of sufficient water, is really due to some inflammatory plants and animals is alike in this, that | eggs. the food digested or utilized depends for quantity upon the amount of water supplied and by which it can be dissolved milk it forms stringy clots, which are stance. ejected from the teats with difficulty. It is not that the milk is too thick because of a deficiency of water in it. If the system is short of water the milk will decrease in quantity in even ratio. But whenever the animal is diseased in anv way the milk glands in sympathy Lecome this cause the milk becomes impure, because in disease every secretion of the system is diseased, and at this season the water supply calls for more than usual attention .- New York Times.

FODDER CORN.

Weeds are hardly less injurious in corn intended for fodder than in that grown mainly for the grain. In both cases the object must be to get as large a growth of stalk as possible. The larger the stalk is the richer and sweeter it becomes. If there is room and light this for grain, if the season is unfavorable it on such a diet. The planted corn that and temporary. can be cultivated at least one way never utterly fails, as fodder corn often does when the season is not favorable. If good for nothing else, it makes splendid from which ripened ears have been taken. In growing fodder corn it is best broadcast we would still prefer to drill far enough apart to run a cultivator between the rows. In most seasons, however, the large weight will be in the corn that has been cultivated and has grown large enough to produce incipient ears .- Courier-Journal.

FARM AND GARDEN NOTES. Always save the best for seed. Miss no farmers' club meetings. Hurry in the corn and potatoes. How about dry fuel for winter? Make a good seed-bed for wheat. Have you selected good seed corn? Oxen in harness do not look as clumsy as you may think.

Repairs are now in order, and will be until winter comes.

introduce disease there. poultry every few days.

There is scarcely any danger of giving too much variety of food. Boiling water destroys the germs of

miasma which it contains. By weight, ducks will lay more eggs during the year than hens.

practiced, is a foolish thing. As nearly as possible, follow a line of farming that suits you best.

Wait until the frost kills the flies before painting your buildings. Gather the eggs regularly every day

and keep in a dry, cool place. As far as possible, own your tools and keep them in a good condition. Don't be afraid of keeping your dairy

her

the

stable too clean and parlor-like. Composting manure reduces bulk and saves in the amount of handling. When at the fair study and compare

the various breeds of fowls on exhibi-

Clean agricultural fairs have a certain moral value as well as a financial and educational value.

Mixed husbandry is advisable, and frequent seeding of clover, to keep the subsoil open to the admission of air and moisture.

If the hen that stole her nest comes off with a brood and you have not a proper place for them, kill at once for they will die one by one.

To the market gardener as well as the ordinary farmer an exhibition of his products and the various varieties that he grows is of the utmost value.

Sheep will thrive on almost any grass that grows on dry, rolling land; but they greatly prefer short, sweet herbage, like blue grass, and they do best on it.

Mares used to warm stables cannot be turned loose on rocky hills in a cold and storm and thrive; nor can they produce the colts they should and would under

It is not fiction but sober fact that western farmers sometimes moved their stables rather than haul out the manure. Those farmers now haul out all the manure

When you have the stables all ready for winter use, a good coat of whitewash will add to their freshness as well as looks. Add a bit of glue to the wash

We have never known of a man getting rich in the poultry business, but have mers. Start small and grow gradually.

Brown Leghorns are not as extensively bred on the farm as other varieties. For a village fowl they are unsurpassed, as their plumage is such that it does not soil or show dirt. They are a remarkably hardy and active fowl and eat concondition of the cow. The feeding of siderable-but pay for it many fold in

If the farmer would give the same attention to his poultry that he does to his horses, cattle, sheep and hogs, they would or diluted. If a cow is stinted in water succeed equally as well on equal capital the whole system becomes disturbed and expended, or more properly, invested. an inflammatory condition is set up which Provide light substantial buildings, good disturbs every vital organ, and especially food, keep houses and yards clean and the udder. Fibrine is a product of in- neat, and shut out vermin and there flammation, and when this appears in the should be success in nearly every in-

Poor Lacemakers of Europe.

Valenciennes lace is manufactured in Belgium. It is made on a lace pillow. The pattern is pricked on a revolving cylinder and then pins are stuck in these holes. The thread is wound on bobbins diseased, and necessarily the character of and the lacemaker has to play them in the milk is changed. Sufficient and and out among the pins. Valencieunes pure water is necessary for the health of lace brings from \$25 to \$200 a yard. the cow. When the health suffers from There is not much ostentation about it, but it is an aristocratic appearing lace, modest and elegant. These lacemakers can earn about twenty cents a day for their labor.

In the South of France is made the torchon lace, which perhaps is more generally used than other lace material. It is made like the Valenciennes on a lace pillow at a little town called Le Puy. The women of this place make laces that sell all the way from two cents to \$5 a yard. During the ordinary years of their work they earn from four to six cents a day, but once in a while good fortune sweetness is changed to the starch of the grain. But as fodder corn is always popular demand for a certain kind of sown or drilled more tnickly than that material, such as the yak or the guipure lace, which are made on the same kind is injured all the more by the presence of of cushion as the torchon. When this weeds. Fodder corn that does not tassel demand for these special hues comes they is scarcely worth harvesting, as cows will may be able to earn by diligent work as only eat it when forced to do so by much as forty or sixty cents a day. But hunger, and then fall off in flesh or milk such good lack is at the best spasmodic

The torchon lacemakers are poorer than any of the rest. In the villages throughout the mountains they are so devoid of even the necessaries of life that fodder, and sometimes better than that public ovens are built for their use. Fires are lighted in these ogens about once a week as a measure of economy, to have a large weight in few stalks and to them these lacemakers brings rather than in many, so if we could grow their bread to be baked. Yet they are the same weight per acre by sowing cleanly in their habits and seem to enjoy life quite as well as the more fortunate in

this world. The English thread laces are made near Devonshire in the south of England. The old thread lacemakers are dying out and their places are not being filled by younger blood. As a result the trade can never get enough of these thread laces to satisfy the demand.

The duchesse lace is another Belgium product. In this kind of laces the figures are made on pillows and then are joined into patterns by the lacemakers afterward. Duchess lace is sold from \$1 to \$50 a yard .- Chicago Post.

Bowed Piano.

A new invention in musical instruments has been brought out in Austria by a manufacturer living at Pressburg, which is causing a good deal of interest. An animal raised on the farm will not This is called a bowed piano, but is really a case resembling a piano-forte frame and Change the feeding coops for the young containing six violins, two violas, and two violoncellos, the strings of which are tuned to different notes. The instruments are connected by circular bands, which are brought into contact with the strings by means of the keyboard, the hammers of which bear upon the bands with varying pressure. The instrument is said to produce a fine tone, soft or Summer fallowing, as it used to be powerful; but the principal difficulty in bringing it into practical use would be the tuning of the gut strings required, as wire strings could not be universally employed, and it is to be feared it is only likely to be a musical curiosity. -- Commercial Advertiser.

Opera by 'Phone.

A novel method of hearing opera, which the readers of Edward Bellamy's "Looking Backward" will recollect as the one in vogue in the year of grace 2000, has just been instituted at the Gastle of Rhonstock.

The Royal Opera House at Berlin was connected by telephone with the music 100m in the castle at Rhonstock. In Many farmers fail because they are the evening the Emperors of Germany farmers by circumstances and not by and Austria, the King of Saxony and the rest of the royal party assembled in that room and heard the opera of "Les Huguenots," which was performed in Berlin.—New York Journal. HOUSEHOLD AFFAIRS.

THE ART OF SWEEPING. In sweeping take long, light strokes,

and do not use too heavy a broom. "Alice," said Lois, "do you honestly think sweeping is harder exercise than playing tennis."

I hesitated. "I really don't know. One never thinks of hard or easy in tennis, the game is so interesting; and then it's outdoor exercise, and there's no danger of inhaling dust."

"Well, for my part," said Marjorie, "I like doing work that tells. There is so much satisfaction in seeing the figures in the carpet come out brightly under my broom! Alice, what did you do to make your reception-room 'so perfectly splendiferous? Girls, look here! You'd think this carpet had just come out of the warehouse.

"Mother often tells Aunt Hetty, said I, "to dip the end of the broom in a pail of water in which she has poured a little ammonia-a teaspoonful to a gallon. The ammonia takes off the dust and refreshes the colors wonderfully. We couldn't keep house without it," I finished, rather proudly.

"Did you bring some from home?" asked Marjorie, looking hurt. "Why, of course not! I asked your mother, and she gave me the bottle and

told me to take what I wanted." "A little coarse salt or some damp tea leaves strewed over a carpet before sweeping adds ease to the cleansing process," said Mrs. Downing, appearing ou the scene and praising us for our thoroughness. "The reason is that both the salt and the tea leaves being moist keep down the light floating dust, which gives more trouble than the heavier dirt. But now you will all be better for a short rest; so come into my little snuggery and have a gossip and a lunch, and then you may attack the enemy again."-Harper's Young People.

SALAD SAUCES.

Salad sauces, unless properly prepared, writes Mrs. E. R. Parker in the Courier Journal, are not only very unpalatable, but also very unhealthy, a fact that has must be given the work, when it will be found very easy to serve an excellent, digestible dish, by using either plain sauce dressing, or mayonnaise sauce, as the occasion may require. The following recipes are taken from the best authorities on the subject, and are used by the best cooks:

East India Salad Sauce-Rub the volks of two hard-boiled eggs smooth and add a teaspoonful of curry powder, eight teaspoonsful of olive oil, gradually, and two tablespoonsful of tarragon vine--gar; work until proper consistency.

French Salad Dressing-Put half a teaspoonful of salt, and a fourth of a teaspoonful of pepper in a bowl, add then three tablespoonsful of oil, gradually, rub and mix well, then pour in a tablespoonful of vinegar, and stir for one

Cream Salad Dressing-Mash the hard boiled yolks of three eggs until fine, then add the yolk of one raw egg, and beat smooth; add a tablespoonful of melted butter, salt and pepper, beat half a teacup of thick cream, stir the mixture all together and then add two tablespoonsful of strong vinegar.

Plain Salad Dressing-Mix one teaspoonful of oil, one saltspoonful of salt, and half as much black pepper, stir until well mixed, add to the salad, and mix again, then add three more tablespoonsful of oil and stir the salad lightly. Lastly add a tablespoonful of sharp vinegar, stir again, and serve.

English Salad Dressing-Rub the volks of two hard-boiled eggs and one raw one together; when very smooth add a teaspoonful of salt and half as much pepper, with a teaspoonful of dry mustard; by degrees, add six tablespoonsful of oil and ten of vinegar; mix well, and add four tablespoonsful of sweet cream, and set on ice until wanted.

Simple Mayonnaise-Take a bowl, wash in cold water, and set on the ice until well chilled. Heat the yolks of two eggs and drop in the bowl; add a teaspoonful of salt and a saltspoon of pepper; add one tablespoonful of oil; beat thoroughly, and, by degrees, add half a pint of oil. When it begins to thicken add a few drops of vinegar at a time, until two tablespoonfuls have been mixed in. Mayonnaise sauce, for fancy salads, may be colored green by the addition of spinach juice, and red with the vinegar from pickled beets. Aspec mayonnaise is made by adding melted aspec jelly to mayonnaise.

A Method of Floating Stranded Vessels

Commander F. M. Barber, of the United States Navy, has recently had granted to him a patent for a method of floating stranded vessels. It has been known that if a sudden jar can be given vessel, which is aground, at the sain time that force is being exerted to draw her off she can often be floated when all other methods fail. Commander Barber's method is to give the vessel a jar by simultaneously exploding a number of torpedoes placed on the bottom of the water at a short distance from the vessel. His patent covers all applications of explosives to floating stranded vessels, and will probably be extensively used by wrecking companies .- New York Tribune.

The Chicken Was an Eater.

One of our chicken cranks, who believes in good breeds, killed a six-monthsold black Langshan cockerel, on Saturday last, that was nearly if not quite as large as a turkey. It weighed exactly six pounds; measured from tip to tip of wings, after being dressed, twenty-three inches, and was sixteen and one-half inches high," The chicken was just getting in good growing trim, and would have been a whopper if left alone. But it could eat about as much as a pig, and the short corn crop shortened that chicken's life. - La Gnange (Ga.)

WOMAN'S INTUITION.

Searly Always Right in Her Judgment in

Regard to Common Things. An old gentleman over seventy, came into the city from his farm, without his overcoat. The day turned chilly and he was obliged to forego his visit to the fair. To a friend who remonstrated with him for

going away from home thus unprepared, he said: "I thought it was going to be warm; my wife told me to take my overcoat, but I wouldn't. Women have more sense than men anyway." A frank admission.

Women's good sense is said to come from intuition; may it not be that they are more close observers of little things. One thing is certain, they are apt to strike the nail on the head, in all the ordinary problems of life, more frequently than the lords of creation. "According to Dr. Alice Bennett who recently read a paper on Bright's disease before the Pennsylvania State Medical Society. persons subject to bifious attacks and sick headaches, who have crawling sensations, like the flowing of water in the head, who are 'tired all the time' and have unexplained

attacks of sudden weakness, may well be sus-

pected of dangerous tendencies in the direc-

tion of Bright's disease." The veteran newspaper correspondent, Joe Howard, of the New York Press, in noting this statement, suggests: "Possibly Alice is correct in her diagnosis, but why doesn't she give some idea of treatment? I know a man who has been 'tired all the time' for ten years. Night before last he took two doses of calomel and yesterday he wished he

A proper answer is found in the following letter of Mrs. Davis, wife of Rev. Wm. J. Davis, of Basil, O., June 21st, 1890:

"I do not hesitate to say that I owe my life to Warner's Safe Cure. I had a constant hemorrhage from my kidneys for more than five months. The physicians could do nothing for me. My husband spent hundreds of dollars and I was not relieved. I was under the care of the most eminent medical men in the State. The hemorrhage ceased before I had taken one bottle of the Safe Cure. I can safely and do cheerfully recommend it to all who are sufferers of kidney troubles."

Centennarian Curios.

In the last act of the play, "The Old Homestead," at the Academy, New Kork, there is used an old wooden rocking cradle that has been in the family of Denman Thompson and h's forefathers over 130 years. It has rocked six generations of "Uncle Joshuas," The old fashioned clock introduced in this scene is also an heirloom of the Thompson family, having been in the family since its early members settled in New Hampshire over a century and a half ago. The gun which hangs given many people the idea that salads over the fireplace is even older. The date are unsuitable food for general use. Care of its manufacture stamped on the barrel is 1725. Denman's ancestors used the piece in 1776.

THE easiest way to clean shoes or rubber over-shoes which have become muddy is with vaseline. A little "swab" of flannel on the end of a stick is good for this purpose. Even if the vase ine touches the hands, it forms a coating over them. so that task is not so unpleasant as it otherwise would be.

When?

When sores break out on your person, when pimples cover your face, when you feel weak and debilitated, and your nervous system feels shattered, when you have aches and pains, when your appetite fails, when you are troubled with dyspepsia, when there is a general functional derangement and life hardly seems worth living, give Dr. Bull's Sarsaparilla a trial and you will be delighted at its pleasing effect. As a general health r storer and strengthener of the whole system it is superior to any other compound. It will not harm the most delicate invalid and has saved thousands from a premature grave. You wrong yourself when you delay giving 4t a trial.

Never fight with a sweep; you cannot black-en him, but he may blacken you.

LADIES needing a tonic, or children who want building up, should take Brown's Iron Bitters. It is i leasant to tale, cures Malaria, Indigestion, Billiousness and Liver Complaints, makes the Blood rich and pure.

It is hard for a lazy man to be truthful, for he is happiest when lying.

Many a poor little sickly child has been saved from the grave by its kind mother giv-ing it Dr. Bull's Worm Destroyers, which the little one thought was candy.

Considering how little the bell knows, it is wonderful how much it has been toiled.

A Wonderful Paper,

In 1834 the first practical telegraph was worked in England, after a crude attempt made in 1835, on a line of thirteen miles between Paddington and Drayton. In 1844 a telegraph line was opened between Washington and Baltimore. In 1850 a copper wire insulated in gutta percha was submerged between Dover and Calais, and the first submarine telegraph was laid by the late T. R. Crampton.

There are now 942 submarine cables, exclusive of the seven Atlantic cables, with an aggregate 112,740 nautical miles. The overland telegraph has already become a world-wide institution, in which there is a total of 1,680,900 miles of wire-enough of the attenuated metal to go around the equatorial belt of the globe just thirty times. The number of words transmitted, the miles traveled and the cash changing hands would tax the enumeration table.

Commendable.

All claims not consistent with the high character of Syrup of Figs are purposely avoided by the Cal. Fig Syrup Company. It acts gently on the kidneys, liver and bowels, cleansing the system effectually, but it is not a cure-all and makes no pretensions that every bottle will not substantiate.

It is the man who can't sing that seems anxious that every one should know it.

Many persons are broken down from over-work or household cares. Brown's Iron Bit-ters rebuilds the system, aids digestion, re-moves excess of bile, and cures malaria. A splendid tonic for women and children.

The Indian was the original ticket-scalper with the axsent on the scalp.

I have used Bull's Sarsaparilla in skin diseases of long standing, which demanded a thorough change of the fluids of the body, and any physician knowing its composition wi admit its value. W. T. Prentise, Lewispor
