

Zebulon To Have Fair Sept. 27-Oct 2

Plans have just about been effected for a first class fair in Zebulon this fall. The promoters are Wade Privette, Whitley Chamblee, and E. Dabney Gill. The Board of Directors are: in addition to the officers, R. H. Bridgers, F. D. Finch, H. C. Stallings, W. J. Wilder, C. V. Whitley, Avon Privette, W. S. Williams, and Wallace Chamblee.

Papers of incorporation will be issued soon. The fair will be called the Zebulon Five County Fair and will appeal for exhibits from those sections of Wake, Johnston, Wilson, Nash and Franklin counties adjacent to Zebulon. The promoters say they expect to have premiums for the agricultural exhibits that will appeal to the farmers and bring out the very best of all produce grown on farms. Flowers, fruits, vegetables, canning, cooking and every other exhibit of interest usually found in a good fair will be on display with suitable premiums offered.

In addition to the agricultural exhibits which are expected to be by far the best ever seen in a fair in this section, there will be a midway of attractions of the cleanest and best to be had. One attraction already signed comes directly from the fair in Winston-Salem, we understand, and appears at only one other fair in the state.

Let everybody get ready for the Five County Fair. The farmers may now begin to grow the best produce for exhibit, for they are assured a good prize; the housekeepers may begin to do their best in cooking and canning, being certain to find prizes offered that will justify doing their best. Let everybody get ready for a good time in Zebulon during the week of September 27 to October 2.

FOR A HAPPY HOLIDAY

The "Glorious Fourth" can be just as glorious as we choose to make it. This year the long weekend created by the holiday will intensify the hazards which the 4th always produces. The watchword should be, "Take care!"

Independence Day celebrates the independence of the nation. Great streams of traffic pouring over the highways will show how essential are mutual regard and courtesy among drivers. Fireworks will demonstrate it too. A "firecracker thrown by another" is, according to the National Conservation Bureau, the greatest single cause of the tremendous number of fireworks accidents every Fourth of July. At the beaches and lakes, imprudent swimmers will again remind us that human life must be risked to save the life of a drowning person.

Reasonable care divides a happy holiday from the tragedies which mar it. Reasonable care will insure you, your family, and the other fellow against mishap. For instance:

If you drive—see that your car is in good mechanical condition. Check tires, lights, brakes, steering mechanism, windshield wiper, rear-view mirror, horn. Drive skillfully, at a reasonable speed. Observe the rules and courtesies of the road.

If you must use fireworks—give yourself plenty of space. Keep away from children and animals and buildings. Throw firecrackers away from people and inflammable materials, not at them. Never hold an exploding firecracker, nor set them off under a bottle or can. Cauterize the smallest wound immediately—tetanus poisoning works fast and kills.

If you go swimming—swim in safe and protected places. Beware of strong tides and currents.

Union Chapel

We feel that God sent us a Sunday school. When He sent us a guiding angel through Miss June Fay Sewell, who so faithfully taught and lead us the right way towards a standard Sunday school. We are glad to report that through the good cooperation of the people of this community we passed our goal of 75 and made the best average of the 16 churches represented Rolesville. There were 95 present Sunday that we are sure to keep. The singing at Benson drew some away.

The revival meeting will begin next Sunday night at 8 o'clock. Mr. Sexton, the pastor, will preach. Regular church services will be Sunday morning at 11 o'clock.

Mr. and Mrs. Douglas Bobbitt were weekend guests at Mr. Edgar Harris, the father of Mrs. Bobbitt.

Mr. Davis Pate of Durham spent last week with his brother, Mr. M. E. Pate.

Mr. and Mrs. Sidney Funkhouser of Washington City were the weekend guests of Mr. and Mrs. Woodrow Richards.

Newell Hodge of Washington, D. C., and Miss Nell Kearney of Raleigh were weekend guests of Mr. and Mrs. B. B. Richards.

Mrs. J. L. Hudson and Miss Vera Ray spent the latter part of last week in Clinton.

Mrs. Jeannie Robertson is spending the week with her daughter, Mrs. J. W. Oakley.

Mrs. Woodrow Richards, little daughter Shirley Anne, and sister Ruby Funkhouser are spending the next two weeks in Washington and Jerone, Va., with their friends, parents and relatives.

Estelle Richards and Ronald Lee Richards son of Woodrow, left on Monday to visit Ronald's grand parents and other relatives. They will also visit relatives in D. C.

Among those that went to Benson Sunday were Mr. and Mrs. Clem Creech, son Jack, and Erdine Phillips, Mr. and Mrs. Smoote Draughan and Mrs. Venton Ferrell.

REGISTER YOUR CHILD

Raleigh.—The increasing importance of seeing that every child born is properly registered was emphasized by Dr. R. T. Stimpson, director of the Vital Statistics Division of the State Board of Health. Among other things, he called attention to the fact that after 1942 all persons registering for benefits under the Federal Social Security Act must furnish copies of their birth certificates. Much of the child welfare now being done by states, towns and other agencies is dependent upon proper birth reports, while, in order to comply with child labor laws, ages must be legally and definitely established.

"See that the child's name appears on its birth certificate, because this gives it an undisputed status," Dr. Stimpson advised. "A certificate without the child's name is of very little value to the child. Frequently, in legal matters, much depends upon the birth record. There have been frequent cases where the absence of such authentic record meant serious financial loss.

Registration may be accomplished by mail. "It is such a small thing to ask, this filling out of a certificate to guard the child's birthright and prevent future le-

gal and other complications," Dr. Stimpson declared. "The child is not the only one affected by the failure of the doctor, the midwife or parent, in the order named, to report its birth. Failure to make reports will soon throw the registrar's record out of balance. To be completely effective, vital statistics must be as nearly accurate as possible. The law says every baby shall be registered within five days after birth. Reports are made to local registrars in the various counties. The names of these have been printed in a pamphlet issued by the State Board of Health.

"For the sake of the baby, who may later stand in need of this very important information, see that each birth is properly registered with the right official."

Life Saving Class At Lake Myra

Mr. Russel Nicholson, director of water safety for Wake county chapter of the American Red Cross, announced that Junior and Senior Life Saving Classes will be held by the Wake County chapter of the Red Cross at Lake Myra beginning Wednesday, July 7, from 4:00 till 5:30. An announcement will be made the opening day as to whether classes will be held every day or every other day.

A learn-to-swim campaign will also be held for people who do not know how. Watch for further announcements as to the time that classes will be held.

It is gratifying to announce that there will be no charge for this course. Not only will instruction be free, but the management of Lake Myra offers free entrance into the water for those who take the course. An effort will be made to transport from Zebulon those who enroll for the entire series of lessons. All who desire the teaching and can attend regularly are asked to leave their names with Badger Johnson at Carolina Power and Light Co. here, or at the Record office with Barry Davis.

SUN-STOVE

Out in California, H. E. McCoy has built a de-luxe sun-cooker which he uses for barbecuing meat. This new solar stove consists of 20 panel-mirrors arranged one above the other, and so spaced that the top panel is 11 feet from the ground. The mirrored surfaces reflect heat from the sun upon a "hot spot" in the oven, a yard-square compartment enclosed on three sides with special ventilated glass.

By turning a set of thumb screws, the "chef" regulates the angles of the mirrors and controls the size and temperature of the hot spot. This area may be heated to 1000 degrees Fahrenheit, a temperature hot enough to melt several metals—or burn any roast.

SAFETY FIRST

(We reprint what we think to be an excellent safety letter, which was distributed by the Texas Co. The letter follows. Editor.)

ALL EMPLOYEES, CONSIGNEES, AND DISTRIBUTORS Gentlemen:

The driver who always claims his right of way will sooner or later meet a fellow-driver with the same feeling or disposition. It will be just too bad when two such drivers meet. Just who has the right of way? The courts hold that the man on the right has it, provided he enters the intersection first. This ruling applies to intersections where there is an absence of traffic lights.

To be haled into court, because of a right of way claim and on account of one of our drivers failing to extend one of the courtesies of

the road would indeed be humiliating to us. Not only would it entail financial loss, but it would have psychological effect upon the buying public, which would react upon the Texas Company in numerous ways.

We do not want any law suits, nor do we want our drivers injured or our trucks, cars or delivery wagons damaged because of right of way trouble. Therefore, we ask our men to relinquish this right, even though it belongs to them rather than taking a chance of hitting another vehicle, or perhaps injuring or killing someone. Failure to extend this right of way courtesy was responsible for 135,840 accidents in 1935 — causing the death of 3,580 persons and injuries to 191,880 others.

Exemplify this courtesy during all your driving hours.

Yours very truly,
JRW:JPE J. R. Walker

HELP FOR THE GARDENER

Through use of a chemical liquid applied to the base of plant cuttings, even the poorest of amateur gardeners may now propagate his favorite rose, magnolia, favorite fruit tree or any one of dozens of shrubs, trees or perennials. The discovery of this liquid, which stimulates tremendously the root-growing properties of plants, was announced by Dr. P. W. Zimmerman and Dr. A. E. Hitchcock of the Boyce Thompson Institute for Plant Research some two years ago at the American Association for the Advancement of Science and named by them Hormodin "A".

The amateur is not the only one to benefit by this discovery. The commercial grower, farmer and horticulturist will find hormodin useful. Cuttings treated with hormodin will usually root in from five to eight days, saving time, labor and money. The writer has experimented successfully with azalea, lilac, winterberry, and rhododendron.

Fruit growers find they can now propagate apple and peach trees from cuttings with more satisfactory results than can be obtained with grafting methods. A most important part of the process however, and one over which much care must be exercised, is the provision of shade and water for cuttings after a good root system has been started.

HOT WEATHER ADDS TO DAIRYMAN'S PROBLEMS

Faulty rations, heat, and flies are blamed for the difficulty in getting cows to produce a full, even flow of milk through the summer.

In July, said John A. Arey, extension dairy specialist at State College, grazing in most permanent pastures gets short and tough and the grass contains less protein than earlier in the season.

Temporary grazing crops such as lespeche and sudan grass are needed to supplement the permanent pasture, he said; or the cows should be fed silage, with the protein content of the grain mixture being increased to 20 per cent.

As the grazing in the pasture decreases, he added, the quantity of grain fed should be increased.

Cows suffer from heat, and if possible the place where they are kept during the hot part of the day should be provided with shade and an ample supply of fresh water.

Flies will irritate cows and keep them from producing a full milk flow, Arey continued.

As far as possible, fly breeding places should be eliminated. Stalls and manure pits should be cleaned as often as possible, at least once a week, and the manure hauled to the fields.

Fly traps and sprays will also help protect the animals from this annoyance, he stated. There are a number of good sprays that will kill and repel flies. These matters are just as important to be looked after where only one family cow is kept as where there is a herd.

Farmers Bulletin No. 734, which may be obtained from the U. S. Department of Agriculture, Washington D. C., gives instructions for making good, inexpensive fly traps at home.

The May pea crop in Pasquotank county left a lot of headaches and empty pockets, reports county agent G. W. Falls, who says growers want some kind of farm program to aid truck growers in that section.

Applications of ground limestone and phosphate has meant greener pastures in Madison county this spring than in many years past. More livestock is being grazed on the same acreage with better results.
