

## Church News

On last Sunday at the morning church hour Pastor Bradley made an appeal for donations to help pay the debt on Lousiburg College.

The Southside Circle of the Baptist W. M. S. met last week with 20 present. The Northside Circle met with Mrs. G. R. Massey on Monday of this week. The Central Circle met with Mrs. J. B. Outlaw on Tuesday night.

Pastor Theo B. Davis is conducting revival services at Social Plains church with services in the afternoon and at night all this week. The preaching is being done by Rev. W. H. Poole, pastor of Hephzibah.

The Baptist Philathea Class met on Monday night in the home of the teacher, Mrs. W. N. Pitts.

The Fidelis class, of which Mrs. Avon Privette is teacher, had charge of the service at prayer-meeting on Wednesday evening of this week.

Rev. R. H. Herring will fill his regular appointment at the Zebulon Baptist church next Sunday.

The pastor of the Union Hope church baptized twenty-eight last Sunday morning. Fifty-three were received by letter and for baptism during the revival meeting closing a week ago.

### REVIVAL CLOSES

Pastor A. D. Parrish closed a series of revival meetings at Hopkins Chapel on July 18 and as a result of the meeting there are 24 to be baptized into the membership of the church. Baptizing will be at Gay's Pond Sunday, August 1st at 2 o'clock.

Pastor Parrish is in a meeting at Samaria this week.

### NEGLECTED CHICKENS PRODUCE FEWER EGGS

Low egg production in hot weather often causes poultrymen to neglect their flocks with the result that production continues low in the fall when it should be increasing.

Good management in hot weather not only keeps birds in better condition for heavy production later, but it also keeps up production through the summer, said Roy S. Dearstyne, head of the poultry department at State College.

Shade to protect birds from the sun during the hottest part of the day is essential to thrifty birds. A portable range shelter provides shade where birds can feed and rest.

Since range crops usually become dry and unpalatable in summer, the birds need an ample ration in their feed hoppers. Plenty of fresh water should be available at all times.

Plenty of grain should be fed during the developing season. A good mash should be fed also as it contains vital food elements that are not provided in a grain diet alone.

Where crippled and subnormal birds are found in the flock, they should be culled out at once. Such birds never pay profit and their low vitality often makes them the starting point for an outbreak of contagious disease.

Lice and mite infestations occur frequently in summer and result in heavy losses unless checked at once.

Fowl pox can be prevented by vaccinating the birds at an early age. The disease usually breaks out in the fall when the birds are in full lay and making a profit for their owner. Leghorns are especially susceptible to pox.

## NEWS BRIEFS

### LIGHTNING STRIKES SELDOM

Although it may seem to many that this summer has had an unusual number of deaths from lightning, statistics show that only one person out of 100,000 is killed by such a stroke. Even in Georgia, said to have more deaths from lightning than any other state, these figures hold.

All the same, it is wiser to stay away from tall trees and metal fences during any storm or rainfall.

### AMERICAN LEGION CONVENES

The American Legion convention is being held in Durham this week. The outstanding feature of the meeting was an address by Secretary of War, Harry Woodring on Monday night. Because of heavy rain the address was delivered in the Armory instead of the stadium of Duke University, as had been arranged beforehand. The grand parade was marred by rain which drenched the marchers. One veteran suffered a stroke from the heat and was said to be in serious condition. Contests for leaders in the department commandership are taking much time and thought of all delegates.

Governor Hoey also addressed the Legionnaires during their meeting.

### NEW RULER IN EGYPT

For the first time in 400 years Egypt has an independent ruler. On Thursday King Farouk 1, 17 years old, ascended the throne. He was not crowned as are European monarchs, though many festivities attended the taking of the oath before Parliament in Cairo. British military occupation of Egypt has ended, though the country is still allied with Great Britain.

Mrs. M. E. Shamburger and daughter, Betsy, arrived from Richmond on Tuesday to spend some time with the Pittman Stells.

Mrs. Norman Screws has as her guest Miss Betty Roselle of Albany, N. Y.

This week's State contains an excellent article on The Zebulon Supply Store and its manager, C. V. Whitley.

### CLIMATE; WEATHER; ETC.

An interesting article in Collier's for July 31 discusses various problems confronting those who foretell weather changes.

The U. S. Weather Bureau was established in 1870. Mentioning that there are now more than 300 weather bureaus in the United States, the writer gives in detail their duties and responsibilities. He makes clear the distinction between climate, which is average weather through the ages; and weather, which means conditions from day to day. For instance: If it is cold here in the winter months that is climate; if it snows, that is weather. (In some sections "falling weather" is used to mean rain, snow, or sleet.)

It may surprise some to learn of the importance of the work of aviators in the struggle with climate and weather. Their explorations of the upper air have added materially to scientific knowledge; while in turn, they are largely dependent upon weather reports for determining days and hours of departure from airports.

In the stratosphere, a region above the atmosphere in the lower part of which we live, there is no weather. The thermometer holds steady. But this is high above us. The atmosphere extends upward for from four to seven miles.

### WHY PEOPLE DROWN

To prevent drownings one must study the causes of drowning. Generally speaking one who drowns suffocates from lack of oxygen. Water may or may not enter the breathing apparatus, or be taken into the stomach.

Swimmers must understand breathing since swimming requires that the individual be able to breathe despite considerable water pressure against the chest. Too many people who swim spend more time learning strokes than breathing, and breathing is the key to the situation.

So it may be assumed that faulty breathing is not only the reason why so many people swim poorly, but is also the underlying reason so many lose their lives in the water. They do not know how or when to get air, or how to conserve it to the best advantage once they have it.

Good swimmers take a gulp of good air and immediately start getting rid of it through both nose and mouth to be ready for the next cycle of arm strokes. Inability to get rid of the air is the cause of speedy fatigue and faulty arm action, and is the reason many people go swimming and do not come back. So until these essentials of swimming are mastered, swim by the dock, parallel to the shore, or accompanied by a boat. This does not indicate timidity, but common sense; you have but one life to live, so make the most of it.

Another type of drowning results from poor health or illness. You should feel fit when you go swimming because every time you enter the water the heart must work harder: extra blood must be pumped to the capillaries on the surface to combat the cold, the muscles need flood for swimming; the stomach calls for it to complete the digestion of the last meal, unless you have waited a couple of hours before entering the water. All these calls on the heart may be too severe if it is not in good shape.

If you must go in with the crowd play around in the shallow water where you can get up and walk out if you react queerly. Keep near some member of the party who could give you a hand. A swimming buddy is always desirable for young and old.

We are learning more about the physical effects of cold, especially of cold water. After prolonged exposure to the sun the sudden transition into cold water may be disastrous. It is wise to remain in the standing water until you get adjusted; avoid the deep channel.

Night bathing parties, especially following indulgence in alcohol, are always dangerous. Many midnight dips follow prolonged imbibing and the human mechanism can not respond to the cold stimulus as it should. The whiskey manufacturers advise against driving a car or any other activity that requires judgment and skill following a drink of whiskey. "Stay quietly at home and relax," they say. Clearly they do not recommend swimming. Alcohol or even carbonated water and sea water do not mix. For campers we suggest that if they take moonlight dips the entire group, regardless of swimming ability, confine itself to the elementary swimmers area and strictly adhere to the "buddy" plan of a partner for every bather.

And last, and perhaps it should have been first, is the show-off drowner. He dies because he tries to show he has skill he does not possess. I say "he" in this case because ten white males drown for every female who drowns. Eleven hundred boys and young men between 15 and 19 years of age drown annually, to prove they are superior to safety regulations.

## New York Fair Hall To Feature Radio and Television

NEW YORK (Special). — Radio, television, movies, telephone, telegraph, photography, news and magazine print—all those factors as they relate to communications in American life—will have their own pavilion and ten-acre exhibit zone at the New York World's Fair of 1939, according to an announcement by Grover Whalen, President of the Fair Corporation.

The Hall of Communications will be built this year on the 1216½-acre exposition site within a few minutes ride from mid-town Manhattan. Its location is adjacent to that of the unique Theme Centre structures, which with their "thousand wonders" will dominate the Fair grounds. About the Hall will be grouped ten acres of buildings to be erected.

The total length of the Hall of Communications will be over 400 feet. Its cost is estimated at \$400,000. Numerous other Fair structures are emerging from stages of design. Construction of the exposition, however, will not reach its peak until early next year.

### COMBS GOES AND COMES

A few weeks ago C. R. Combs sold out his filling station in Zebulon to Willis Strickland and with his wife hied away to California, the taste of movies and money. But only yesterday he returned. C. R. says California is a mighty fine place for the fellow who has a good job and plenty of money, but as for the rest of the folks — they had better stay at home.

Mrs. M. E. Shamburger and daughter, Betsy, arrived from Richmond Tuesday to spend some time with the Pittman Stells.

## Uncle Jim Says

By liming and fertilizing old permanent pastures, some of my neighbors get about 40 days of extra grazing a year.

NORTH CAROLINA:  
WAKE COUNTY.  
CLEVELAND LUCAS

vs.  
SUSIE SMITH LUCAS.  
IN THE SUPERIOR COURT  
NOTICE

The defendant above named will take notice that an action entitled as above has been commenced in the Superior Court of Wake County for the purpose of obtaining an absolute divorce on the grounds of two years separation; and the said defendant will further take notice that she is required to appear at the office of the Clerk of the Superior Court of Wake County, at the court house in said county, on or before the 23rd day of August, 1937, and answer or demur to the complaint in said action, or the plaintiff will apply to the Court for the relief demanded in said complaint.

This the 22nd day of July, 1937.  
SARA ALLEN,  
Asst. Clerk of Superior Court.  
July 30—August 20th., 1937.
